JANSET® FUNCTIONAL KNOBS

"PUSH-TO-SET" OR "PUSH-TO-TURN"

DISTINCTIVE FEATURES:

- **Dimensions (see chart above).**
- **Installation: Same as a standard knob.**
- **Locks shaft automatically, upon release.**
- **Release Brake when depressed: settings can be altered.**
- **Resolution: Infinite, with zero backlash.**
- **Shaft Registration: to indicators, ie.: arrows, dots, cut-outs, etc.**
- **Shock or vibration settings are guarded against accidental change.**
- **Integral Assembly: Mechanism completely enclosed in knob body.**
- **Old designs: Janset® Knobs require no modification to existing panels.**
- **Shaft sizes: 1/8 thru 1/4 dia. (except 1/2 dia. knob, 5/32" shaft dia. max.).**
- **Panel Bushings: Fits with all 1/4 and 3/8 standard.**
- **Space: No space required behind panel; all functions within knob body.**

PREFIX	
S (Slip Clutch)	**SLIP CLUTCH:** Prevents over torquing delicate mechanisms. Functions as standard knob between limit stops. When limit is reached and knob rotation continues, clutch overrides the stop without applying torque in excess of specifications. Driving torque in detented position .5-6 LB./IN. (depending on knob diameter).
PT (Push-To-Turn)	**BRAKE KNOB:** Prevents control setting from movement due to shock or vibration.
PSC (Push-To-Set)	**Brake Knob W/ OVERRIDING CLUTCH:** Same as "PT" with added feature of "S" (slip clutch) combined. Knob can be rotated without changing setting (if not pushed in).
PSCE (Push-To-Set /w Limit Stop)	**Brake Knob W/ Overriding Clutch & LIMIT STOP:** Same as "PT" & "PSC" with added feature of limit stop (320° MAX) built in.
LSC*** (Pull-To-Turn)	**Brake Knob W/ Overriding Clutch — PULL-TO-TURN:** Same as "PSC" except pull-to-turn. For use in extremely hostile environment, i.e.: Life Support Equipment.
PTN (Spin Free Push-To-Turn)	**SPIN FREE PUSH-TO-ENGAGE:** Prevents shaft from inadvertent turning — Knob spins free unless depressed and rotated until full internal engagement is accomplished for use where SHAFT TORQUE EXCEEDS 4 oz. in.
PTCN (Spin Free Push-To-Turn)	**Spin Free PUSH-TO-ENGAGE:** Same as "PTN" except for use where SHAFT TORQUE is LESS THAN 4 oz. in.
PTNN (Spin Free Press-To-Turn)	**Spin Free PRESS-TO-TURN:** (Friction) Prevents inadvertent change of setting. Use only where intent to turn is required. Must be pressed in while turning, for low torque applications.
LTN (Spin Free Lift-To-Turn)	**Spin Free LIFT-TO-TURN:** Same at "PTN" except pull-to-turn. For use where SHAFT TORQUE EXCEEDS 4 oz. in.
TC (Torque)	**TORQUE KNOB:** (Friction) For use where positive feel is desired and/or where minor excursions of shock and vibration are anticipated.
LEPR (Limit Stop & Release)	**LIMIT STOP W/ QUICK RELEASE:** For use where limited travel (0-? degrees) is required. Push-To-Release stop and continue to the next function.
LELR (Limit Stop & Release)	**Same as LEPR except PULL-TO-RELEASE:** For use in extremely hostile environment, i.e.: Life Support Equipment.

INCREMENTAL KNOBS

Repositions to the exact point, with zero backlash. Easily provides precise setting to pre-determined positions. Can be repeated with finite exactness to as many as 32 or as few as a single position.

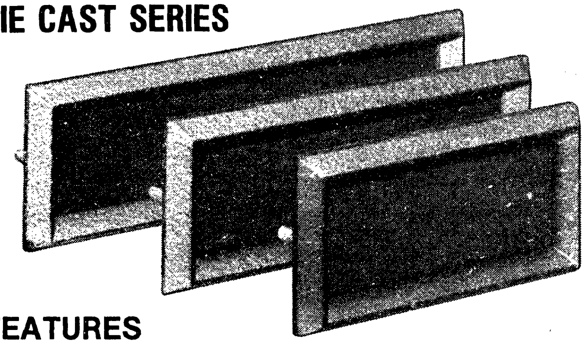
STANDARD AND CUSTOM DIGITAL DISPLAY BEZELS

DIE CAST SERIES



FEATURES

DIE CAST METAL FRAME

- Nonreflective black finish
- Durable — heat resistant
- Integral 6-32 mounting studs
- No exposed hardware
- Mounts in panels up to 3/16" thick
- Includes mounting hardware
- Available in three sizes
- Filters available in 10 colors and clear

DESCRIPTION

The DIE CAST SERIES of bezels consist of a special plastic screen and a die cast metal frame. Mounting is accomplished by two 6-32 studs which can also be used to mount PC boards or other components behind the panel. The high quality of the screen and frame, combined with the universal sizes and mounting flexibility, make the bezels usable for a wide range of applications.

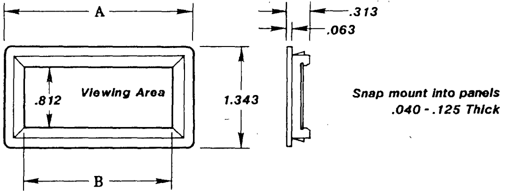
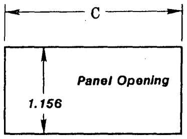
- Filters available in 10 colors and clear

DESCRIPTION

The PLASTIC SERIES of bezels consist of a special plastic screen and an injection molded ABS frame. Mounting is accomplished by a snap-fit into rectangular cut-outs from the outside. The combination of a high quality filter and an inexpensive, easy to mount bezel make this series ideal for a wide range of applications.





PN	A	B	C
1316-138	1.906	1.375	1.750
1316-2	2.531	2.000	2.375
1316-3	3.531	3.000	3.375
1316-4	4.531	4.000	4.375

LOW COST CUSTOM BEZELS

Our new fabricating facility is totally dedicated to the production of non-standard bezels. Using specially designed machines, we can now offer made-to-order sizes in proto-type or production quantities, without costly tooling or extended lead times.

TYPICAL BEZEL MATERIALS

- Aluminum
- Stainless Steel
- Plastic

VARIETY OF FILTER MATERIALS

- Anti-Reflective Coatings
- Polycarbonate
- EMI Shielding
- Large Selection of Colors
- High Scratch Resistance

DESIGN FLEXIBILITY

- Panel Seals
- Welded Studs
- Any Size Viewing Area
- Multi-Opening Bezels

VARIETY OF FINISHING PROCESSES

- Anodizing
- Painting
- Screening
- Plating

Call or write for more information 50 Wheeler Point Rd., Newark, N.J. 07105 (201) 589-4257

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A
AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire gauge

B
BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C
CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D
D/A digital to analog
DAC digital to analog converter
DC direct current
DIAC bidirectional trigger diode
DIL dual in-line
DIN Deutsche Industrie Normenausschuss
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E
EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EMP electromagnetic pulse
EPROM electrically programmable ROM
ESR equivalent series resistance

F
FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G
GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H
HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I
IC integrated circuit
IDC insulation displacement contact
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J
JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K
kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L
LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LIF low insertion force
LNA low noise amplifier
LNB low noise band
LSI large scale integration
LVDT linear velocity displacement transformer

M
MASER microwave amplification by stimulated emission of radiation
MATV master antenna television
μF microforad
MHz megahertz
MIPS million instructions per second
MIB microcomputer interface board
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOSIGT metal-oxide semiconductor insulated-gate transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N
NBS National Bureau of Standards
NEMP nuclear electromagnetic pulse
NIM nuclear instrumentation module
NOR not OR
NTC negative temperature coefficient

O
OCR optical character reader
OEM original equipment manufacturer
OR a logical operator

P
PC printed circuit
PCB printed circuit board
pF picofarad
PGA pin grid array
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PLL phased lock loop
PPI plan position indicator
PROM programmable read only memory
PTC positive temperature coefficient
PUT programmable unijunction transistor

Q
QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R
RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S
SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SCS silicon controlled switch
SDA source & detector assemblies
SIDAC bidirectional voltage-triggered switch
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic
SUS silicon unilateral switch

T
TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TRIAC bidirectional AC switch
TTL transistor-transistor logic
TTY teletypewriter

U
UHF ultra high frequency (300 MHz to 3 GHz)
UJT silicon unijunction transistor
UL Underwriters Laboratory
UPS uninterruptible power supply

V
VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VME virtual machine environment
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W
WPS word processing software

Y
YIG yttrium iron garnet

Z
ZIF zero insertion force

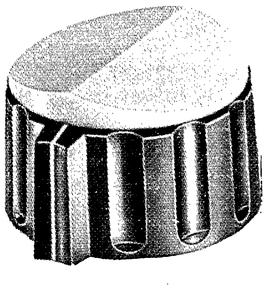
Power Dynamics, Inc.

P.O. Box 539, 59 Lakeside Avenue, West Orange, NJ 07052 • (201) 736-5722 • TWX: 136567 (PDI) • Intl. Telex: 666173 (PDI)

VISE-GRIP COLLET KNOBS

INDUSTRY'S BEST "OFF-THE-SHELF" DELIVERY

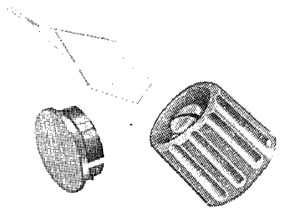
Knobs available in 10mm (0.40), 15mm (0.59), 21mm (0.82), 28mm (1.10) and 36mm (1.42) dia.



PDI knobs are distinguished by their styling, elegance, easy handling, long service life, excellent fit on the shaft as a result of "VISE GRIP" mounting and by their comprehensive accessories program in 24 different colors.

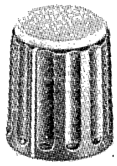
NO FLATS • NO SET SCREW • NO SLIPPAGE

1. REMOVE CAP
2. TIGHTEN COLLET SCREW WITH SCREWDRIVER
3. REPLACE CAP

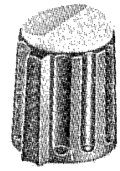


Our exclusive "VISE-GRIP" collet knobs offer distinguished styling, beauty and ease of mounting, as well as long life in the field. The exclusive "VISE-GRIP" collet works much the same way as a drill chuck. Once tightened, it will not work loose. Knobs are mounted with free-drive screws which can be tightened using a Phillips or an ordinary screwdriver.

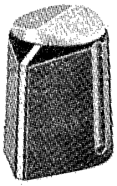
STANDARD KNOB



WING KNOB

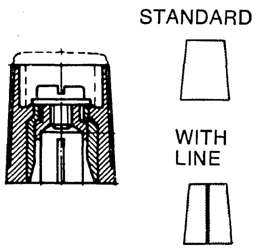


ARROW KNOB



NEW KNURLED DESIGN

TYPICAL CROSS SECTION



MATERIAL

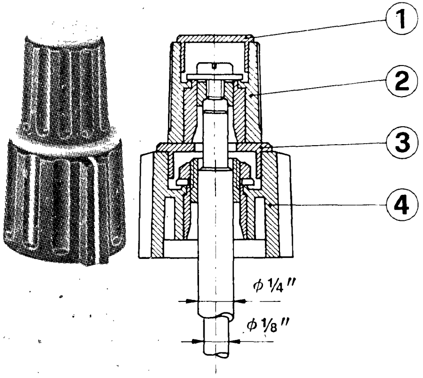
All mouldings of the collet knob are produced from polyamide. Transparent dials are made of luran. Brass 58 is used for the collets, sleeves and nuts. Steel is used for the screws and washers.

TEMPERATURE STABILITY

With normal mechanical stresses: −20°C to +70°C

We can also provide special types of knobs and accessories and custom color matching at lowest prices with prompt delivery. Contact Power Dynamics, Inc.

CONCENTRIC KNOBS

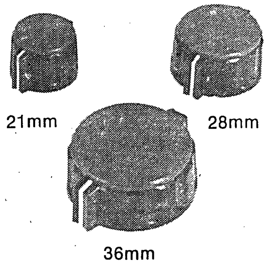


1. Cap 15mm, matte finish, gray
2. Knob 15mm, matte finish, black, collet 1/8 inch
3. Intermediate cap 21mm, matte finish, gray
4. Wing knob 21mm, with line, matte finish, black collet 1/4 inch

Also available in 21mm, 28mm sizes and Lo-Profile Knob.

LO-PROFILE KNOBS

Available in 21mm, 28mm and 36mm styles only



(Not available as "Arrow Knobs")

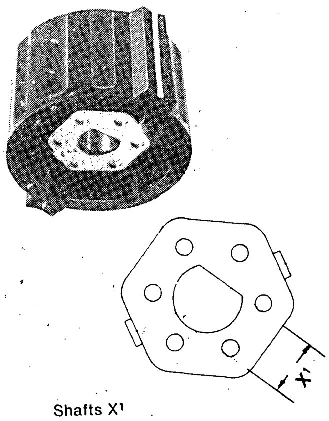
Overall height as follows:

21mm-Overall Height 15mm with cap
13.5mm without cap

28mm-Overall Height 15.5mm with cap
14mm without cap

36mm-Overall Height 16mm with cap
14mm without cap

LOCKING DEVICE



Shafts	X'	
6mm	5.0	49 15 60 0
1/4"	5.08	49 15 61 0

The locking device is a punched part to be pressed separately into the knob, allowing an accurate positioning of the collet knob and giving it an increased torque.

Available for knobs of 21, 28 and 36mm diameters.

RMF MODEL 140 SERIES BEZEL & FILTER ASSEMBLY

Whatever your application may be, these low-cost bezel and filter assemblies will improve the front panel appearance and make the display itself more readable.

Attractive ABS plastic bezels are available in many sizes to match the most popular types of displays.

The colored acrylic filters have a special non-glare surface to make viewing easier. Standard colors are red and clear for LED and LCD displays although any color is available on special order.

INSTALLATION is fast and simple . . . merely insert the filter into the slots on the rear of the bezel, then push the entire assembly into the panel cutout. A quick and easy operation without the use of any tools, adhesive or hardware. Recommended panel thickness is from .040 to .125 in.

	DIMENSIONS				PANEL OPENING		FILTER*

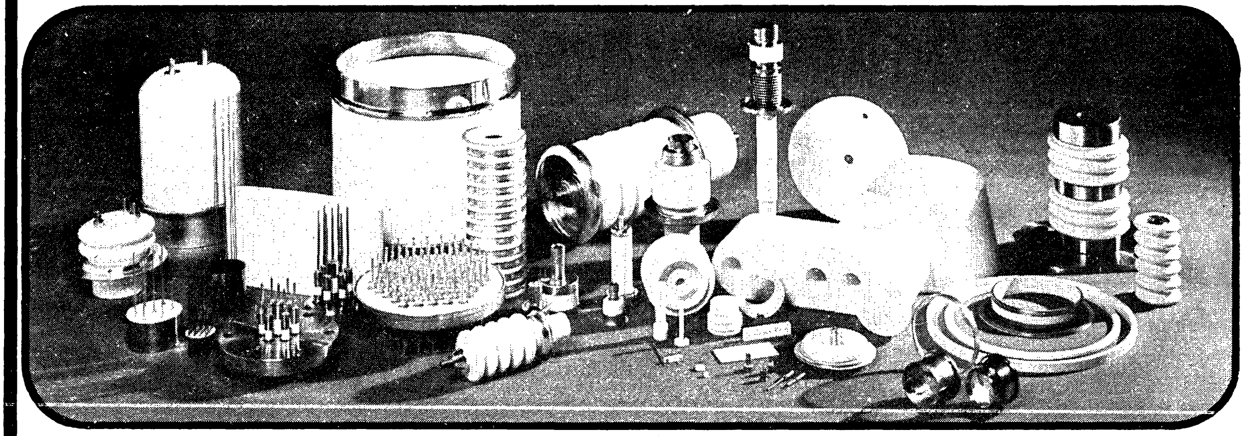
ALBEROX ... *For outstanding performance in high temperature, hermetic terminals.*

We're SPECIALISTS in brazing METAL parts to high alumina CERAMICS for demanding HIGH TEMPERATURE, HERMETIC applications.

CUSTOM HERMETIC CONNECTORS Multipin hermetic connectors for demanding vacuum and space applications requiring 400°C. bakeout — conditions where glass connectors won't stand up — are being produced in a variety of configurations. To save cost, Alberox can also provide connector sub-assemblies such as pin decks to be brazed or welded into shells or flanges by the customer.

MINIATURE TUBE AND PIN SEALS Many high temperature applications require insulated pin or tube feedthrus. These are available with weldable or brazeable metal parts, and can be added to covers or flanges, etc. All Alberox feedthrus are suitable for cryogenic environments.



Since 1961, we have designed and produced a wide variety of seals for custom applications in diverse components such as . . .

- VACUUM FEEDTHRU TERMINALS
- CERAMIC ELECTRON TUBE AND VACUUM SWITCH ENVELOPES
- NUCLEAR REACTOR PENETRATOR FEEDTHRU TERMINALS and INSULATORS
- SQUIBB and DETONATOR CONNECTORS
- SPACE FLIGHT HERMETIC CONNECTORS
- JET ENGINE THERMOCOUPLE COMPONENTS
- HIGH PRESSURE OIL WELL LOGGING FEEDTHRUS
- CAPACITORS and TRANSFORMER TERMINALS

In addition to the above, Alberox has designed and produced state-of-the-art components for critical nuclear devices.

The Alberox plant was designed and built specifically for the efficient production of ceramic-to-metal seals. We manufacture our own A-950 high alumina ceramic, which enables us to optimize on the best metalizing process for this ceramic; thus we can provide superior seals. By making our own ceramic, our customers benefit by fast delivery on custom designs.

Another important feature of Alberox is that all of the plating requirements are met "in-house", including nickel, gold, copper, silver, bright tin and solder plating!

We have several types of BRAZING FURNACES for brazing ceramic-to-metal and metal-to-metal parts in HIGH VACUUM, or HYDROGEN, ARGON or any other specified atmosphere! The standard operating procedure is to custom program the brazing cycle, taking into account the ceramic, the types of metals, braze materials and the atmosphere.

Alberox exercises complete control, from the design stage right through all manufacturing operations — to meet or exceed the highest quality standards and maintain the fastest delivery in the industry. Products made by Alberox are assured to outperform all design parameters set for them!

HIGH PRESSURE FEEDTHRUS *Alberox A-950 Alumina* has extraordinarily high compressive strength (350,000 psi). By using this strength to its best advantage, ceramic-to-metal seals can be produced to withstand high static or dynamic pressures. Thousands of these seals have been manufactured by Alberox.

MULTITERMINAL FEEDTHRUS Multiterminal feedthrus differ from multipin connectors in that individual feedthru terminals are brazed or welded into a metal deck or flange. These feedthrus are generally used for higher voltage applications than can be accommodated by a regular ceramic pin deck or connector. Alberox has an extensive line of catalog tubular terminal bushings which are often used for the individual feedthrus. In this way, custom multiterminal feedthrus can be delivered quickly.

POWER FEEDTHRUS Copper, or just about any other type of metal, from ⅛ inch to over 1 inch in diameter can be provided in power feedthrus. Modifications of our standard catalog tubular and fluted terminal bushings are often perfectly suited, and custom ceramic-to-metal seal designs can be easily accommodated. Weldable or brazeable flanges also can be added to the feedthrus to allow easy installation on existing flanges or bulkheads.

INSULATORS AND STANDOFFS Insulators and standoffs can be supplied in tubular or fluted shapes, bare or glazed, with or without metal adapters or studs. Alberox manufactures plain ceramic parts for use as spacers, insulators, supports, isolators, decks, or washers. Metalized and glazed cylinders are also available for envelopes of high power electron tubes such as Thyratrons or for vacuum switches.

CATALOG HIGH VOLTAGE BUSHINGS Alberox stocks the largest variety of high voltage tubular and fluted high alumina terminal bushings in the industry. Modifications to these catalog items are easily made. Typical modifications are: special studs, brazed-in-center conductors, different metal parts, finishes and ceramic dimensional changes. Fast delivery at reasonable prices can still be maintained. Ask for Catalog #472 which illustrates details of these parts.

Alberox is ready to assist you with your ceramic-to-metal seal design requirements. When you need FAST DELIVERY of SUPERB ceramic-to-metal seals, at realistic prices — contact ALBEROX.

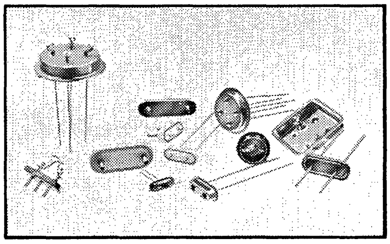
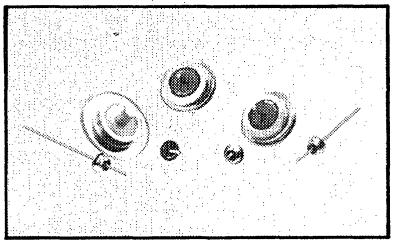
QUARTZ CRYSTAL BASES



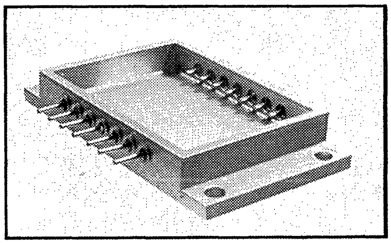
Reeves-Hoffman manufactures an extensive line of crystal bases, either to military standards or customer specification. Send us your prints for review. We may have a design that will satisfy your needs.

SPECIALIZED TERMINALS



A large variety of single pin terminals are available in numerous materials and platings. From a solderable terminal for an oscillator to a weldable tantalum lead terminal for a lithium battery.

POWER PACKAGES



Custom designs to meet your specific requirements. Our in-house capability allows us to work with various materials and methods to achieve the results you desire; High Thermal Transfer and Mechanical Stability.

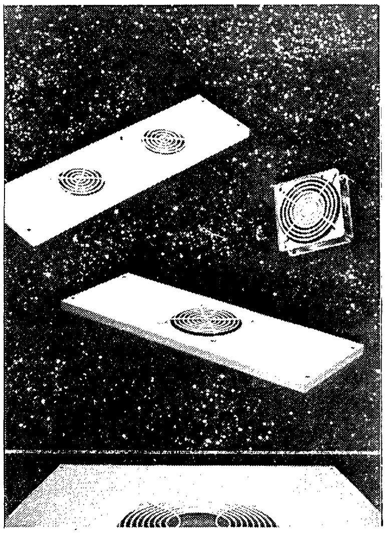
AMCO Cooling Devices

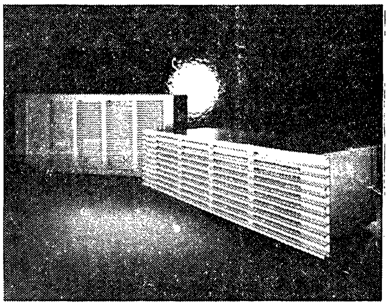
Cooling Devices for Electronics from AMCO Engineering Co.



AMCO Fans

AMCO's new line of high performance tube axial fans offers a variety of quiet air flow speeds and assembly options to meet your spot cooling requirements. Fans are available individually, in tandem assemblies or pre-mounted on attractively colored panels to simplify mounting to enclosure frames. Diameters of 3", 4" (low or high flow), 6" and 10" are offered, providing a range of air flows from 27 to 540 SCFM. AMCO fans include front protection grilles and mounting hardware. Standard panel mounted assemblies are available in 19", 24" and 30" width EIA panels and allow multiple fan configurations. Variable speed control is included with BTA10 fan. Optional accessories are available.

ЯU Recognized
Ⓢ Listed



AMCO Blowers

AMCO's line of dual scroll blower assemblies feature solid state variable speed controls incorporating high gain RF noise filters and full wave phase control circuitry to achieve infinite speed variations. Model BDS5 occupies 5¼" panel height and provides 150 to 200 SCFM with quiet operation at 51.7 to 55.8 dB. Occupying 8¾" panel height, Model BDS8 delivers 325 to 425 SCFM at 51 to 55 dB. For recessed base mounted applications, Model BRDS provides 300 to 400 SCFM at 51 to 55 dB, while utilizing only 3½" of vertical panel space. Blower housings are plated and grilles are clear anodized aluminum. All blowers mount in 19", 24" and 30" panel width consoles and are prewired with 3' or 6' three-conductor cords.

Purchase of an AMCO blower assembly includes mounting hardware, formed clear anodized aluminum grille, reusable filter, speed control, grille mounting hardware and blower box mounting hardware (BRDS only). Optional accessories include air deflectors, dust filters, replacement parts, hardware and deluxe grilles (BRDS only).

BRDS	X	300	400	51	55	Recessed Base Panel

**Because laboratory environment (barometric pressure, temperature and humidity) can vary, all air flow performance ratings are corrected to standard cubic feet per minute—SCFM. This technique is a more accurate method of rating performance than using observed CFM which can vary depending on test conditions.*

Quick Selection Guide

The table at left is presented as a quick reference guide to AMCO Fans and Blowers. For more information on each fan or blower, request AMCO Catalog 803 or call the AMCO representative nearest you—ask about additional models soon to be available and special services provided by AMCO's Cooling Systems Laboratory.

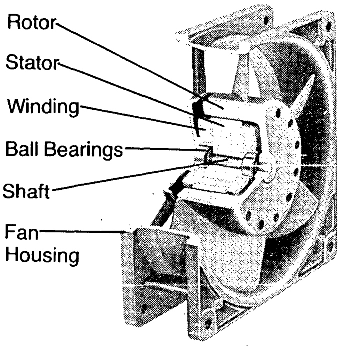
ebm Tubeaxial Fans

External Rotor Motor
All Metal Construction

One simple, reliable design for every electronic application

Motors

The motors used in ebm Tubeaxial fans are either shaded-pole, or PSC designs with Class "B" insulation. Available fans operate at 115V or 230V, 50/60Hz. Dual voltage 115/230V motors and other special models rated from 12V to 240V are also available. All motors are impedence protected in accordance with UL, CSA and VDE requirements. Electromagnetic interference (EMI) is greatly reduced by the self-shielding external rotor. This inherent feature of the ebm design makes it ideal for use in sensitive electronic equipment.



Acoustics

Acoustical sound measurements are made in an anechoic chamber at nominal voltage with a microphone one meter from fan air inlet.

Safety

All fans are designed to meet UL, CSA and VDE standards. Approved products are listed in UL yellow card E54522; CSA file LR3145 and VDE 836 and 11585. It is the responsibility of the user to be sure fans are installed and operated in accordance with all safety codes. Care should be taken to insure that the connecting screws for ground leads do not extend into the housing opening and impede operation of the impeller blades.

Nr. E 54 522 836

Construction

All-metal construction provides excellent heat dissipation, long life and structural stability. The fan itself functions as a heat sink by effectively transferring heat from the motor to the air stream via the metal impeller blades. The impeller blades are sheet steel, precision machined and welded to the metal rotor casing. The housing is die-cast aluminum.

The rotor and impeller blades are dynamically balanced in two planes in accordance with VDI2060. In addition, the fans are finished with an electrostatically applied black varnish to protect against severe environmental conditions.

Bearing System

The type of bearing system selected will directly affect the "life" of the fan. It is recommended that sleeve bearings be used for −10°C to 60°C; ambients and ball-bearings for −30°C to 75°C. With either bearing system, typical operating life is between 20,000 and 40,000 hours. Actual life will depend on ambient temperature, duty cycle, mounting position and environmental conditions; 100,000 hours is not uncommon. Bearings are totally maintenance free.

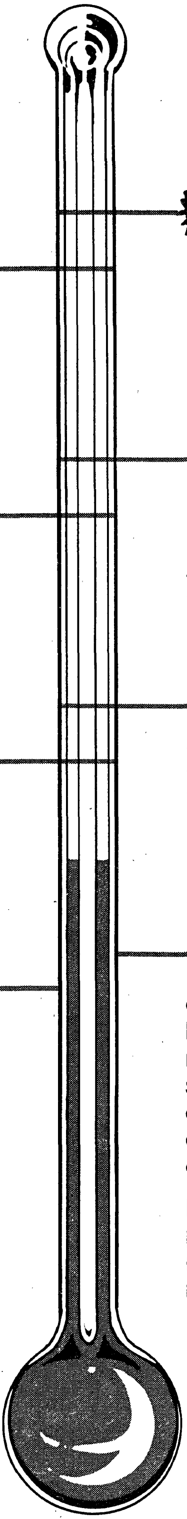
*Skeleton fans without housing

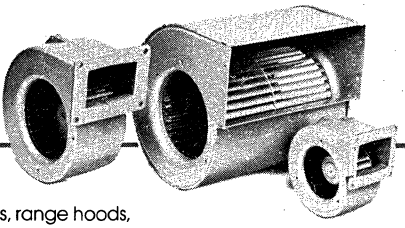
† AC volts rated at 50/60 Hertz

†† 0 static pressure

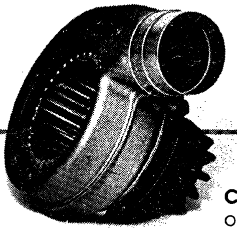
ebm Industries, Inc.—525 New Britain Avenue
Unionville, CT 06085, phone (203) 674-1515

We blow away the problems

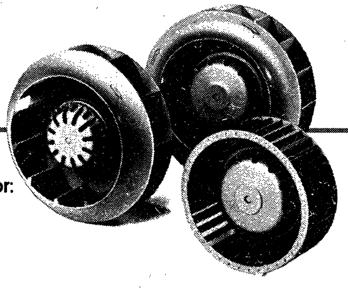




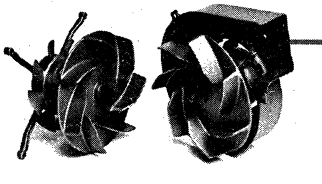
Blowers for:
major appliances, range hoods,
hot air furnaces, air conditioners,
air curtains,
clean rooms



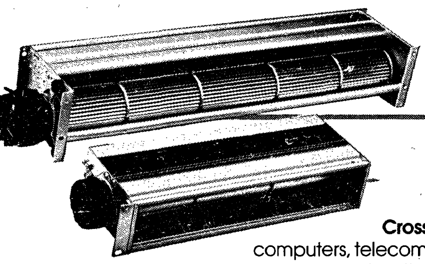
Combustion blowers for:
oil & gas furnaces



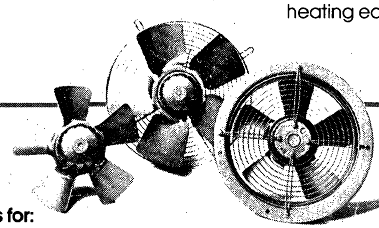
Motorized impellers for:
range hoods,
commercial ovens,
architectural floors,
roof ventilators, office
equipment, telecommunications,
computers



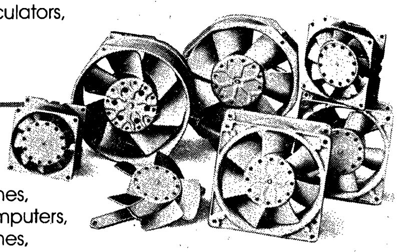
High temperature fans for:
convection ovens,
microwave ovens,
kilns



Crossflow fans for:
computers, telecommunications,
heating equipment



Axial fans for:
solar heat pumps, air conditioners,
greenhouse circulators,
space heaters,
grain dryers



Tubeaxial fans for:
vending machines,
appliances, computers,
business machines,
robotics applications, telecommunications,
instrumentation cooling, sun-tanning equipment,
wood stoves

ebm solves your environmental control problems. Because with ebm's external rotor motor design (impeller attached directly to rotor housing) you get smaller, space-saving sizes and lower operating costs! Plus all metal construction for better heat dissipation and longer life. And they're 100% speed controllable and have UL, CSA and VDE approvals.

It's the kind of superior engineering and performance you'd expect from Europe's largest manufacturer of fans and blowers—now available right here in the U.S.!

All products available with BRUSHLESS DC motors or a complete range of AC motors including 115, 230 and 115/230 dual voltage models.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

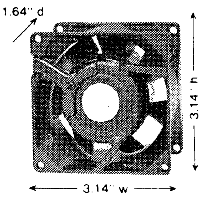
EEM FILE SYSTEM,
645 stewart ave., garden city, ny 11530

EG&G ROTRON

FAN SELECTION GUIDE

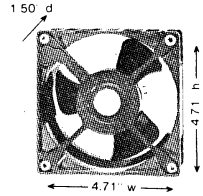
AC FANS AND BLOWERS

SPRITE® FAN



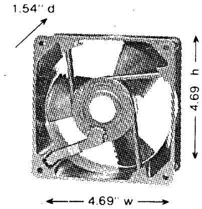
- 20 to 34 CFM (9.5 to 16.0 L/Sec.)
- Size - 3.14" square x 1.64" deep (79.8 mm x 41.8 mm)
- 115 or 220/230 VAC, 50/60 Hz
- Low noise level
- Rugged die-cast zinc housing
- Weight - 18 oz. (.51 Kg)
- Temp. range −28 C to +70°C
- Sleeve or ball bearings
- UL File E31293
- CSA File LR44938
- VDE License No. 25636
- Leadwire or terminal models
- Reverse flow models

WHISPER® FAN



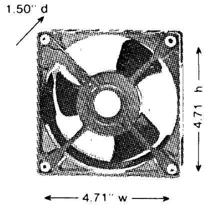
- 57 to 80 CFM (26.9 to 37.8 L/Sec.)
- Size - 4.71" square x 1.50" deep (119.6 mm x 38.1 mm)
- 115 or 220/230 VAC, 50/60 Hz
- Low noise level
- Flame retardant, black phenolic venturi
- Zinc alloy spider
- Weight - 17 oz. (.49 Kg)
- Temp. range −28 C to +70°C
- Sleeve or ball bearings
- UL File E31293
- CSA File LR44938

WHISPER® XL FAN



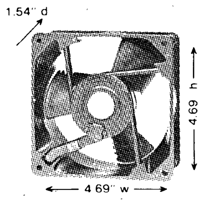
- 50 to 83 CFM (23.5 to 40.0 L/Sec.)
- Size - 4.69" square x 1.54" deep (119.1 mm x 39.1 mm)
- 115 or 220/230 VAC, 50/60 Hz
- Feathered Edge™ blades for lower noise
- Zinc alloy venturi and spiders
- Weight - 21 oz. (.61 Kg)
- Temp. range −28 C to +70°C
- Quiet sleeve bearings
- UL File E31293
- CSA File LR44938
- VDE License No. 25636 on "Y" suffix models

MUFFIN® FAN



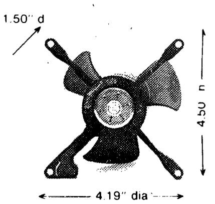
- 105 CFM (49.6 L/Sec.)
- Size - 4.71 " square x 1.50 deep (119.6 mm x 38.1 mm)
- 115 or 220/230 VAC, 50/60 Hz
- Low noise level
- Phenolic venturi
- Zinc alloy spiders
- Weight - 17.2 oz. (.49 Kg)
- Temp. range −28 C to +70 C
- UL File E31293
- CSA File LR44938

MUFFIN® XL FAN



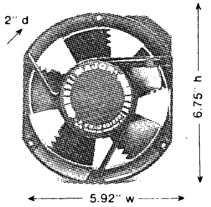
- 108 to 150 CFM (51.0 to 54.3 L/Sec.)
- Size - 4.69" square x 1.54" deep (119.1 mm x 39.1 mm)
- 115 to 220/230 VAC, 50/60 Hz
- Feathered Edge™ blades for lower noise
- Zinc alloy venturi and spider
- Weight - 21 oz. (.61 Kg)
- Temp. range −28 C to +70 C
- Reverse flow models available
- UL File E31293
- CSA File LR44938
- VDE License No. 25636 on "Y" suffix models

SKELETON FANS



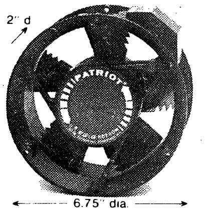
- 57 to 105 CFM (26.9 to 49.6 L/Sec.)
- Size - 4.50" square x 1.50 " deep (114.3 mm x 38.1 mm)
- 115 to 220/230 VAC, 50/60 Hz
- Low noise level
- Zinc alloy spider legs
- Weight - 12.8 oz. (.36 Kg)
- Temp. range −28 C to +70 C
- Sleeve or ball bearing models
- UL File E31293
- CSA File LR44938

MAJOR® FAN



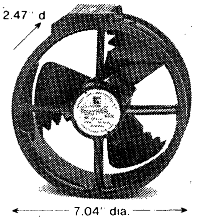
- 114 or 240 CFM (53.8 or 113 L/Sec.)
- Size - 6.75" x 5.92" x 2.00" deep (171.5 mm x 150.4" mm x 50.8 mm)
- 6.375" mounting hole centers
- 115 VAC or 220/230 VAC, 1 phase, 50/60 Hz
- Feathered Edge™ blade design for lower noise
- Rugged die-cast aluminum housing
- Automatic reset thermal protector or impedance protected
- Weight - 1.84 lbs. (.84 Kg)
- For ambients of −10°C to +70°C
- UL Yellow Card Recognized, CSA certified, VDE approval pending
- Fan Performance Sensor (FPS) available

PATRIOT® FAN



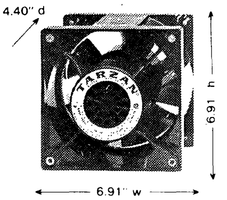
- 114 or 240 CFM (53.8 or 113 L/Sec.)
- Size - 6.75" diameter x 2.00" deep (171.5 mm x 50.8 mm)
- 6.375" mounting hole centers
- 115 VAC or 220/230 VAC, 1 phase, 50/60 Hz
- Feathered Edge™ blade design for lower noise
- Rugged die-cast aluminum housing
- Automatic reset thermal protector or impedance protected
- Weight - 1.84 lbs. (.84 Kg)
- For ambients of −10 C to +70 C
- UL Yellow Card Recognized, CSA Certified, VDE approval pending
- Fan Performance Sensor (FPS) available

FEATHER® FAN



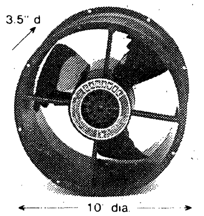
- 245 CFM (116 L/Sec.)
- Size - 7.04" diameter x 2.47" deep (178.9 mm x 62.7 mm)
- 115 VAC or 220/230 VAC, 1 phase, 50/60 Hz
- Feathered Edge™ blade design for lower noise
- Flame retardant, black, polycarbonate housing
- Automatic reset thermal protector
- Weight - 1.5 lbs. (.68 Kg)
- For ambients of −54°C to +65°C
- UL Yellow Card Recognized and CSA Certified

TARZAN® FAN



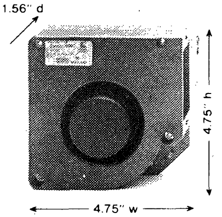
- 340 CFM (160 L/Sec.)
- Size - 6.91" square x 4.40" deep (175.5 mm x 111.8 mm)
- 6.00" mounting hole centers
- 115 VAC or 220/230 VAC, 1 phase, 50/60 Hz
- Low noise level
- Flame retardant, black, phenolic housing
- Automatic reset thermal protector
- Weight - 5 lbs. (2.27 Kg)
- For ambients of −18 C to +60 C
- UL Yellow Card Recognized and CSA Certified
- Leadwire and terminal models

CARAVEL® FAN



- 550 CFM (260 L/Sec.)
- Size - 10.00" diameter x 3.50" deep (254.0 mm x 88.9 mm)
- 9.688" mounting hole centers
- 115 VAC or 220/230 VAC, 1 phase, 50/60 Hz
- Feathered Edge™ blade design for lower noise
- Rugged die-cast aluminum housing
- Automatic reset thermal protector
- Weight - 4.4 lbs (2.0 Kg)
- For ambients of −30°C to +60°C
- UL Yellow Card Recognized and CSA Certified
- Leadwire and terminal models

BISCUIT® BLOWER



- 22 CFM (10 L/Sec.)
- High pressure capability
- Size - 4.75" square x 1.56" deep (120.6 mm x 39.6 mm)
- 115 VAC or 220/230 VAC, 1 phase, 50/60 Hz
- Low noise level
- Black, plastic, UL94V-0 housing
- Impedance protected
- Weight - 18 oz. (.51 Kg)
- For ambients of −18°C to +60°C
- UL Yellow Card Recognized and CSA Certified

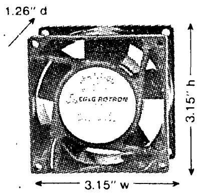
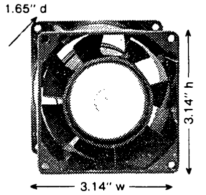
DC FANS AND BLOWERS

SPRINT® DC FAN



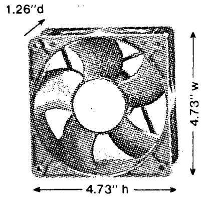
- 12 to 39 CFM (8.0 to 18 L/Sec.)
- Size - 3.15" square x 1.25" deep (80.0 mm x 32.0 mm)
- 2.812" mounting hole centers
- 12 or 24 VDC (nominal)
- Low noise level
- Black, plastic, UL94V-0 housing
- Electronic locked rotor protection or impedance protected
- Polarity protected
- Weight - 6.3 oz. (.18 Kg)
- For ambients of −10°C to +70°C
- Various speed models
- Third wire (tachometer) Output sensor option
- Meets FCC and VDE EMI requirements

SPRITE® DC FAN



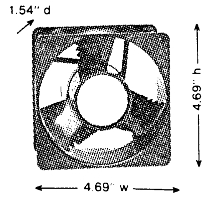
- 10 to 40 CFM (5 to 19 L/Sec.)
- Size - 3.14" square x 1.65" deep (79.8 mm x 41.8 mm)
- 2.812 " mounting hole centers
- 12, 24 or 48 VDC (nominal)
- Low noise level
- Rugged one piece die-cast zinc housing
- Electronic locked rotor protection
- Polarity protected
- Weight - 17.5 oz. (.50 Kg)
- For ambients of −10°C to +70°C
- Leadwire and terminal models
- Third wire (tachometer) Output sensor option
- Meets FCC and VDE EMI requirements

MUFFIN® DC FAN



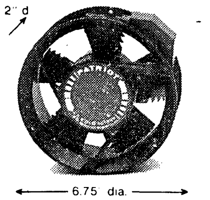
- 50 to 112 CFM (24 to 48.1 L/Sec.)
- Size - 4.73" square x 1.26" deep (120 mm x 32.0 mm)
- 4.125" mounting hole centers
- 12 or 24 VDC (nominal)
- Low noise level
- Black, plastic, UL94V-0 housing
- Electronic locked rotor protection
- Polarity protected
- Weight - 8.5 oz. (.24 Kg)
- For ambients of −10°C to +60°C
- Various speed models
- Third wire (tachometer) Output sensor option
- Meets FCC and VDE EMI requirements

MUFFIN® XL DC FAN



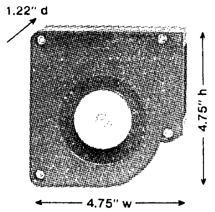
- 40 to 120 CFM (18.9 to 56.6 L/Sec.)
- Size - 4.69" square x 1.54" deep (119.1 mm x 39.1 mm)
- 4.125" mounting hole centers
- 12, 24 or 48 VDC (nominal)
- Feathered Edge™ blade design for lower noise
- Rugged die-cast zinc housing
- Electronic locked rotor protection
- Polarity protected
- Weight - 21.5 oz. (.61 Kg)
- For ambients of −10°C to +70°C
- UL Yellow Card Recognized and CSA Certified
- Sleeve and ball bearing models
- Meets FCC and VDE EMI requirements

PATRIOT® DC FAN



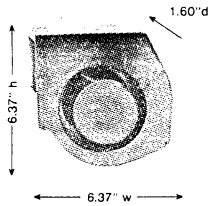
- 100 to 260 CFM (47.2 to 123 L/Sec.)
- Size - 6.75" diameter x 2.00" deep (171.5 mm x 50.8 mm)
- 6.375" mounting hole centers
- 12, 24 or 48 VDC (nominal)
- Feathered Edge™ blade design for lower noise
- Rugged die-cast aluminum housing
- Electronic locked rotor protection
- Polarity protected
- Weight - 1.84 lbs. (.84 Kg)
- For ambients of −10°C to +70°C
- UL Yellow Card Recognized and CSA Certified
- Fan Performance Sensor (FPS) available
- Meets FCC and VDE EMI requirements

BISCUIT® DC BLOWER



- 20 to 28 CFM (9.4 to 13.2 L/Sec.)
- High pressure capability
- Size - 4.75" square x 1.22" deep (120.7 mm x 31.0 mm)
- 12 or 24 VDC (nominal)
- Low noise level
- Black, plastic, UL94V-0 housing
- Electronic locked rotor protection
- Polarity protected
- Weight - 10 oz. (.28 Kg)
- For ambients of −10°C to +50°C
- Third wire (tachometer) Output sensor option
- Meets FCC and VDE EMI requirements

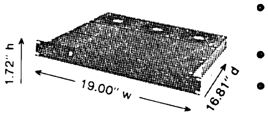
SPINNAKER™ DC BLOWER



- 29 to 72 CFM (14 to 34 L/Sec.)
- High pressure capability
- Size - 6.37" square x 1.60" deep (161.8 mm x 40.6 mm)
- 24 or 48 VDC (nominal)
- Low noise level
- Black, plastic, UL94V-0 housing
- Rugged die-cast zinc baseplate
- Electronic locked rotor protection
- Polarity protected
- Weight - 2.1 lbs. (.953 Kg)
- For ambients of −10°C to +70°C
- Third wire (tachometer) Output sensor option
- Fan Performance Sensor (FPS) available
- Thermal speed control
- Meets FCC and VDE EMI requirements

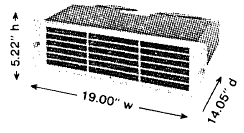
MODULAIR CABINET BLOWERS

MB1000



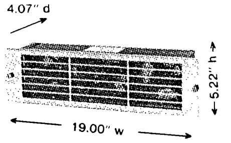
- 280, 620 or 940 CFM (132, 293 or 444 L/Sec.)
- Size - 1.72" high x 16.81" deep x 19.00" wide
- Designed for use in EIA 19" racks
- Utilizes the performance of three, six or nine Muffin® fans
- Each three fan strip may be mounted in any of three locations

MB5100



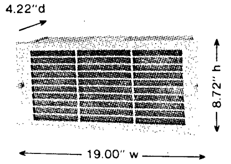
- 400 CFM (189 L/Sec.)
- Size - 5.22" high x 14.05" deep x 19.00" wide (133 mm x 357 mm x 483 mm)
- Designed for use in EIA 19" racks
- Features the performance of two powerful ball bearing Feather® fans
- Unique right angle airflow direction
- Includes grille, cleanable airfilter and finger guards
- Six years continuous duty at 25°C

MB9100



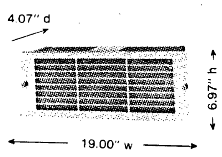
- 240 CFM (113 L/Sec.)
- Size - 5.22" high x 4.07" deep x 19.00" wide (133 mm x 103 mm x 483 mm)
- Designed for use in EIA 19" racks
- Features the performance of three Muffin® fans
- Includes grille, cleanable airfilter and finger guards
- 10 years continuous duty at 25°C

MB9200



- 400 CFM (189 L/Sec.)
- Size - 8.72" high x 4.07" deep x 1900 wide (221 mm x 103 mm x 483 mm)
- Designed for use in EIA 19" racks
- Features the performance at two powerful ball bearing Feather® fans
- Includes grille, cleanable airfilter and finger guards
- Six years continuous duty at 25°C

MB9300



- 400 CFM (189 L/Sec.)
- Size 6.97" high x 4.07" deep x 19.00" wide (177 mm x 103 mm x 483 mm)
- Designed for use in EIA 19" racks
- Powered by two rugged Major® fans
- Includes grille, cleanable airfilter and finger guards
- Five years continuous duty at 25°C

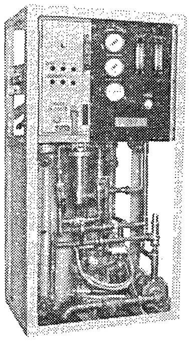
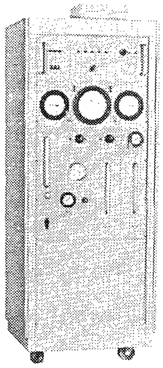
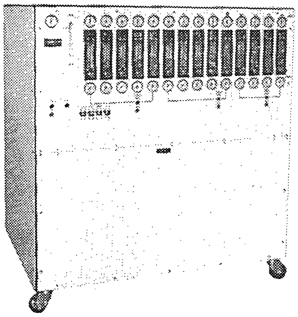
Electro
IMPULSE, INC.
EXCELLENCE IN ENGINEERING SINCE 1949



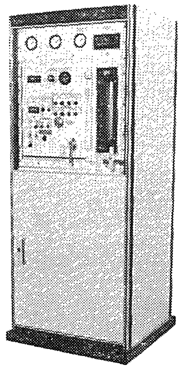
Shipboard Seawater to ETH/Water. H/E cools advanced radar system.



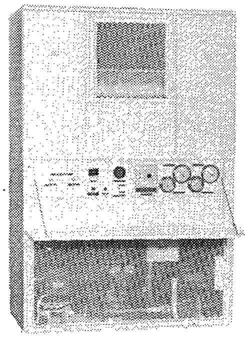
Coolanol to Air Military Heat Exchanger.



14 Path Cooling Unit with full instrumentation.



Burn in of travelling wave tubes is automatic using solid state systems in this Heat Exchanger.



Outdoor Mobile Heat Exchanger.

Closed Loop Cooling Systems

Self contained cooling packages for a wide variety of applications which allow user to

- **ELIMINATE TAP WATER**
- **CONTROL COOLANT QUALITY**
- **CONTROL COOLANT TEMPERATURES**
- **REDUCE COSTS**
- **IMPROVE PERFORMANCE OF EQUIPMENT**

HIGHEST QUALITY Industrial/Military Packages designed for long life/minimum maintenance.
UNITS AVAILABLE to circulate/cool air, water, coolanols, flourocarbons, hydraulic fluids, or any exotic coolants.
SEALED COOLANT SYSTEMS allow for high degree of purity: Filters, De-Ionizer Systems available.
HIGHLY EFFICIENT HEAT EXCHANGERS keep operating power to a minimum. Hot air exhausts can be used for space heating.
EXCELLENT TEMPERATURE CONTROL utilizing state of the art technology.
WIDE VARIETY OF OPTIONS available for monitoring, interlocking, controls, logic interfaces — customize a unit as you want it.

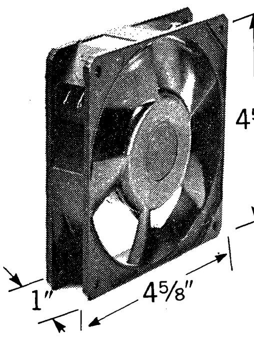
ETRI tube

ETRI has long been a leader in the design of air-moving devices, from large mine ventilators to miniature flat axial fans. Today, ETRI air movers are cooling and protecting the most sophisticated of electronic packages. Throughout this time, our basic commitment to uncompromising quality and high performance standards has not changed. Our history of innovative designs and materials, coupled with precise manufacturing techniques provide you with an efficient, quality product for long maintenance-free operation.

MODEL 98

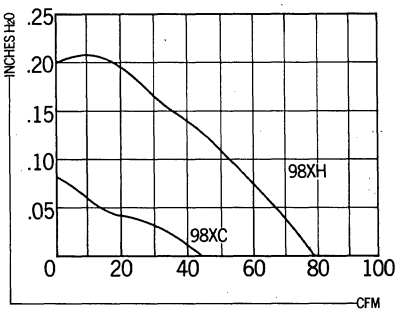


High volume/pressure performance where space is at a premium.

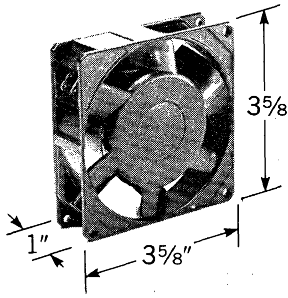
- Unique 1" thin profile on 4⅝" fan.
- Two RPM versions available.
- Available in either sleeve or ball bearing construction.
- Precision engineered blade-to-venturi fit.
- Low input power—as low as 10 watts.
- UL recognized/CSA certified.

PART NUMBER	VOLT (V)	FREQ (Hz)	POWER INPUT (W)	CURRENT INPUT (ma)	SPEED (RPM)	NOISE LEVEL SIL/dB	FREE AIR DELIVERY (CFM)
98XC-2182	115	60	10	110	1700	28	45
98XC-2181	220	60	12	70	1700	28	45
98XH-2182	115	60	11	110	3000	39	79
98XH-2181	220	60	13	65	3000	39	79

Model numbers shown are for sleeve bearing versions. To order ball bearing fans, omit the first "2" from the last group of digits.



MODEL 99

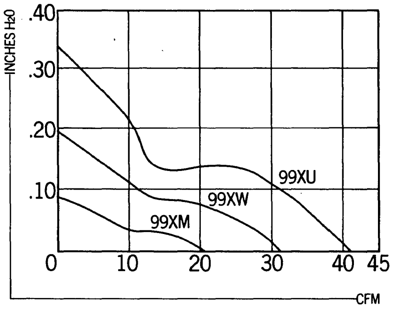


Slim 1" profile takes up less behind-the-panel space.

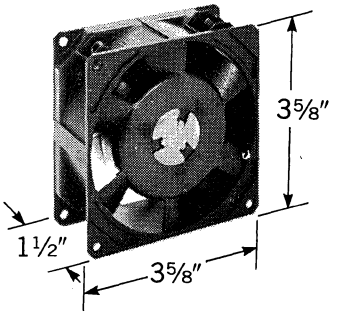
- Three different speed models in two voltage versions.
- Noise levels as low as 23 db (sil).
- True airfoil impeller blades move more air.
- Convenient standard terminals.
- Precision balanced lightweight rotor for longer vibration-free work life.
- UL recognized/CSA approved.

PART NUMBER	VOLT (V)	FREQ (Hz)	POWER INPUT (W)	CURRENT INPUT (ma)	SPEED (RPM)	NOISE LEVEL SIL/dB	FREE AIR DELIVERY (CFM)
99XM-2182	115	60	6	65	1700	23	21
99XM-2181	220	60	7	35	1700	23	21
99XW-2182	115	60	6	70	2500	32	32
99XW-2181	220	60	7	40	2500	32	32
99XU-2182	115	60	9	105	3200	37	40
99XU-2181	220	60	11	60	3200	37	40

Model numbers shown are for sleeve bearing versions. To order ball bearing fans, omit the first "2" from the last group of digits.



MODEL 113

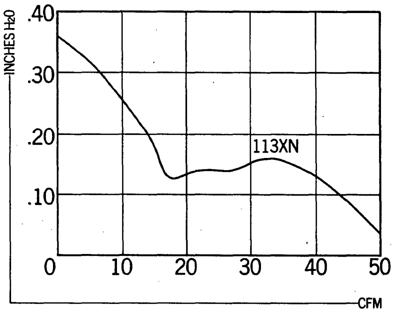


An intermediate size fan. Ideal for power supply applications.

- 3.25" mounting centers.
- Quiet, efficient operation with maximum volume/pressure delivery.
- 94V-O rated glass-filled impeller is heat-stable with high resistance to breakage.
- Available in either sleeve or ball bearing construction.
- UL recognized/CSA approved.

PART NUMBER	VOLT (V)	FREQ (Hz)	POWER INPUT (W)	CURRENT INPUT (ma)	SPEED (RPM)	NOISE LEVEL SIL/dB	FREE AIR DELIVERY (CFM)
113XN-2182	115	60	11	135	3300	35	53
113XN-2181	220	60	12	80	3300	35	53

Model numbers shown are for sleeve bearing versions. To order ball bearing fans, omit the first "2" from the last group of digits.



For information on Etri brushless DC fans, contact the factory

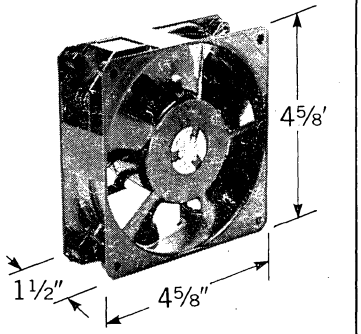
ETRI

ETRI / PO Box 5006 / 608 Broome St. / Monroe, NC 28110 / TWX 810-649-1352 (704) 289-5423

axial fans.

ETRI's popular-sized fans utilize rugged die cast housings for strength and durability. Glass-filled thermoplastic impellers (94V-0 rated) are heat-stable and resistant to breakage. Rotors are lightweight and precision balanced for vibration-free operation. Bearings (either sleeve or ball) are lifetime lubricated. All models operate efficiently at 50Hz or 60Hz and most are available in either 115VAC or 220VAC. Every model is UL Recognized (file E64887) and CSA Certified (file 43861). Many models are VDE approved. For more information call ETRI at 704/289-5423.

MODEL 125

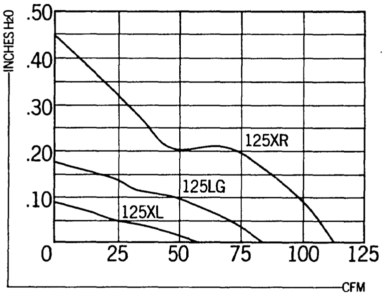


Extremely effective in high density applications where high pressure performance is required.

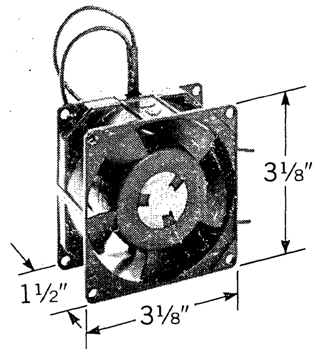
- Develops 90 CFM at .15" H₂O and 75 CFM at .2" H₂O.
- Can replace two conventional fans in demanding applications.
- Produces highest volume of air per watt of power of any fan of its type.
- Available in either sleeve or ball bearing construction.
- UL recognized/CSA certified.

PART NUMBER	VOLT (V)	FREQ (Hz)	POWER INPUT (W)	CURRENT INPUT (ma)	SPEED (RPM)	NOISE LEVEL SIL/dB	FREE AIR DELIVERY (CFM)
125XL-2282	115	60	10	115	1650	29	57
125XL-2281	220	60	10	65	1650	29	57
125LG-2282	115	60	13	160	2400	36	83
125LG-2281	220	60	15	90	2400	36	83
125XR-2282	115	60	15	180	3250	40	112
125XR-2281	220	60	15	105	3250	40	112

Model numbers shown are for sleeve bearing versions. To order ball bearing fans, omit the first "2" from the last group of digits.



MODEL 126



Low input power, low noise, high performance in this fan package.

- 2.81" mounting centers.
- Very quiet operation—only 8 db (sil) on Model 126LH.
- #20AWG, 12" long, flying leads.
- Three different RPM models.
- Available in either sleeve or ball bearing construction.
- UL recognized CSA certified.

PART NUMBER	VOLT (V)	FREQ (Hz)	POWER INPUT (W)	CURRENT INPUT (ma)	SPEED (RPM)	NOISE LEVEL SIL/dB	FREE AIR DELIVERY (CFM)
126LH-2182	115	60	3	40	1550	9	15
126LJ-2182	115	60	5	60	2400	19	23

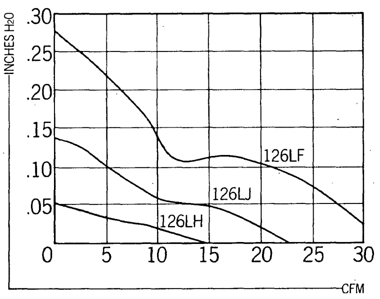
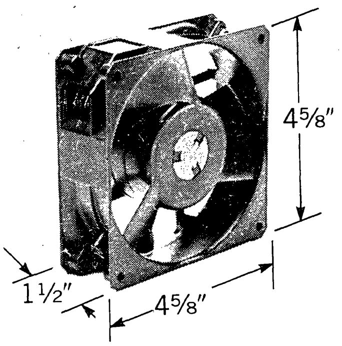
126LF-2181	220	60	8	60	3200	26	32

Model numbers shown are for sleeve bearing versions. To order ball bearing fans, omit the first "2" from the last group of digits.



MODEL 141



105, 75, and 55 CFM versions are available in this most popular size fan.

- 4.125" mounting centers and standard terminal configuration.
- Low power consumption—only 8 watts on 141LV model
- Tight blade-to-venturi fit assures optimum performance.
- Available in either sleeve or ball bearing construction.
- UL recognized/CSA certified
- Reverse flow models available.

PART NUMBER	VOLT (V)	FREQ (Hz)	POWER INPUT (W)	CURRENT INPUT (ma)	SPEED (RPM)	NOISE LEVEL SIL/dB	FREE AIR DELIVERY (CFM)
141LV-2282	115	60	8	100	1700	23	55

ETRI

ETRI / PO Box 5006 / 608 Broome St. / Monroe, NC 28110 / TWX 810-649-1352 (704) 289-5423

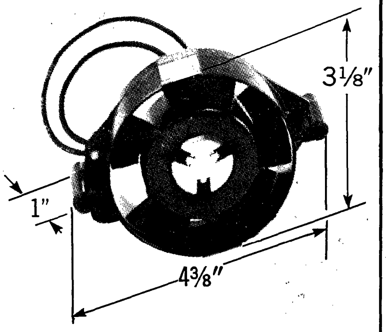
ETRI fans

ETRI's flat tubeaxial fans are quiet, efficient, cost effective components that are ideal for most electronic cooling applications. For complete technical specifications and delivery information call the ETRI factory at (704) 289-5423.

and accessories.

Accessory items assure correct fit on ETRI fans. Finger Guards will retro fit most existing fans.

MODEL 146

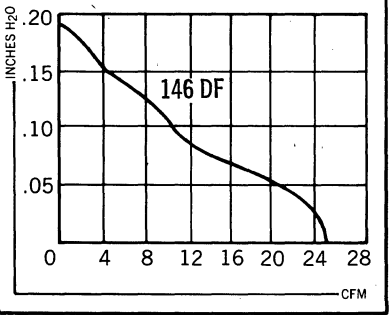


3" x 1" fan specially designed for desk-top electronic applications

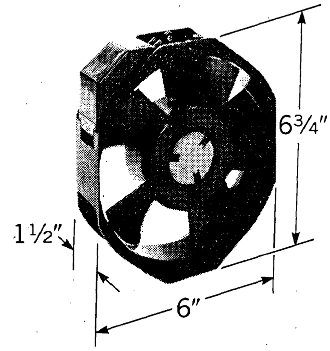
- Low acoustical levels.
- 25 CFM at free air delivery.
- Simplified time saving mounting with bosses and speed nuts provides real economy for high volume installation.
- 115 or 220 volt.
- UL recognized/CSA certified/VDE approved.
- Will fit 3⅛" designs in a 1" profile.

PART NUMBER	VOLT (V)	FREQ (Hz)	POWER INPUT (W)	CURRENT INPUT (ma)	SPEED (RPM)	NOISE LEVEL SIL/dB	FREE AIR DELIVERY (CFM)
146DF-2182	115	60	5	60	3100	24.7	25
146DF-2181	220	60	9	50	3100	24.7	25

Model numbers shown are for sleeve bearing versions. To order ball bearing fans, omit the first "2" from the last group of digits.



MODEL 148



Ideal for high pressure/high flow applications. Develops 180 CFM at .3" H_2O.

- 1½" thick—less than most 6" fans.
- Efficient, permanent split-capacitor motor, thermally protected.
- Pre-loaded ABEC-3, double-shielded, ball bearing system runs quietly in any position.
- UL recognized/CSA certified.
- Reduced speed versions available.
- Provides wide range cooling with low acoustical disturbances.

PART NUMBER	VOLT (V)	FREQ (Hz)	POWER INPUT (W)	CURRENT INPUT (ma)	SPEED (RPM)	NOISE LEVEL SIL/dB	FREE AIR DELIVERY (CFM)
148VE282	115	60	11	90	1650	33	123

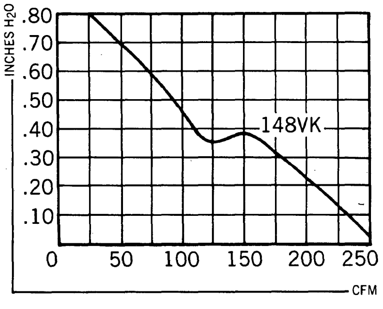
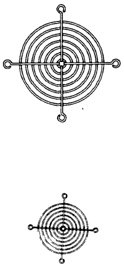
148VK281	220	60	33	170	3200	50.5	255

Model numbers shown are for sleeve bearing versions. To order ball bearing fans, omit the first "2" from the last group of digits.



FINGER GUARDS

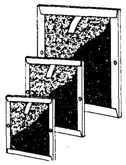
Ensures safe operation in situations that require guarding.



- Standard mounting centers for versatile installation.
- Meets UL Spacing requirements.
- Sturdy .062" steel wire rings welded to .080" ribs.
- Bright zinc-plated finish.

FILTERS

Provides maximum air flow while permitting effective filtering.



- Expanded/slit aluminum foil traps dust particles.
- Minimum pressure loss.
- Complies with UL requirements.

CORDS

All cords are UL recognized #18AWG wire.

- Black SPT-1 type wire in several lengths.

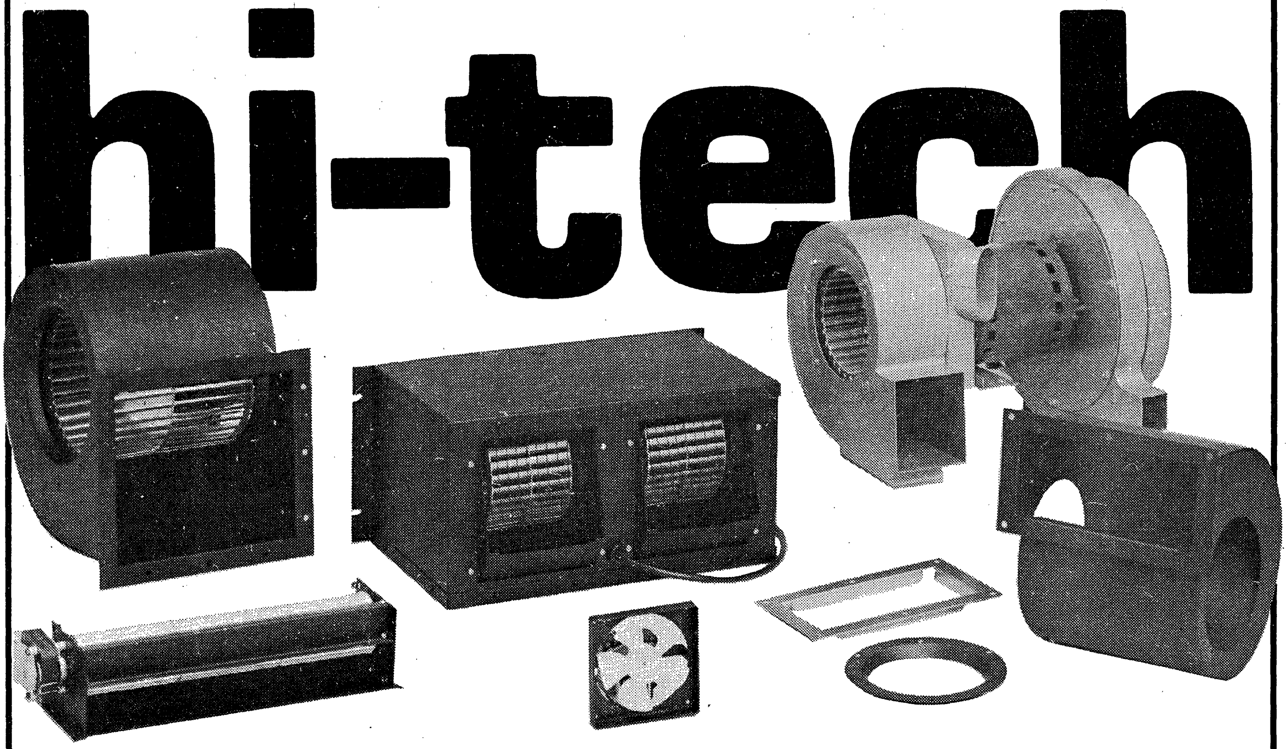
the reliable alternative for fans, blowers and cooling devices



MODULAR CABINET BLOWERS
Applications include heat exchangers, slot blowers, coolers, filter boxes. As a solid state temperature control, unit maintains optimum temperature range.

PACKAGE BLOWERS
Fully assembled high performance blowers feature standard double inlet wheels and automatic reset thermal protection. Housings are heavy-weight steel with a durable flat black finish.

BLOWER HOUSINGS/PARTS
Housings, inlet flanges, cover plates and outlet collars in sizes from 2" to 13" are available for prompt delivery. All parts can be furnished either unpainted or with a hard wearing flat black finish.

AXIAL FLOW FANS
Hi-Tech's axial flow fans are the economical solution for high volume, low static pressure applications; for limited space, spot cooling installations; and where extremely low sound levels are required.

TANGENTIAL BLOWERS
LAMINA-FLO tangential blowers are designed for low profile, wide outlet installations and feature high CFM, even air flow patterns and extremely quiet operation.

SINGLE/DUAL CENTRIFUGAL BLOWERS
Smooth, vibration-free performance assured with balanced wheels and motors. Single and three phase UL approved motors. Static pressures from 0" to 3.0"; outputs to 2000 CFM; wheel diameters from 3" to 12".

When you need a backup source you need them now! When you need assistance with a custom fan or blower you need it now! Hi-Tech will provide that bend-over-backwards service plus first line quality and uncompromising product reliability.

Hi-Tech designs and builds all kinds of cooling components, from axial fans to solid state temperature controllers. Send us your needs. Hi-Tech — The reliable alternative.

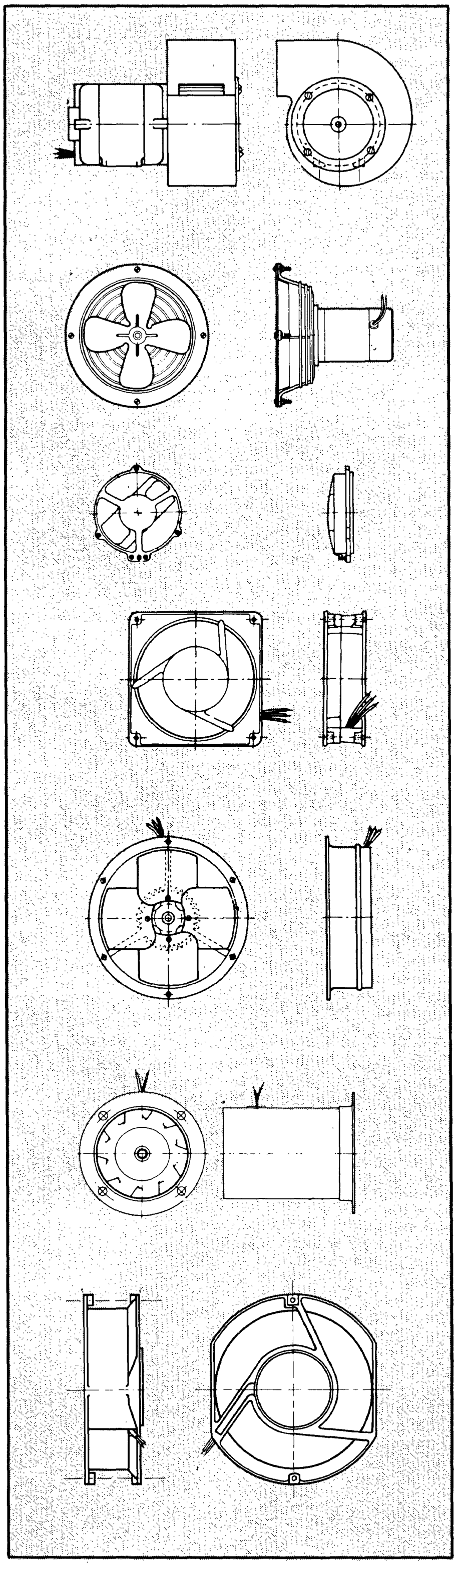
custom airmovers

PRECISION OEM AND MILITARY APPLICATIONS

Select your airmover from the thousand or more catalog designs or let us custom build it.



Centrifugal Blowers

Centrifugal blowers have special housings for attachment to ducts, boots, transition pieces or equipment walls. Air is moved by a wheel (containing multiple cut-outs or blades), which is driven by any of the various types of IMC motors or by an external source of rotating energy. They are most often used in applications requiring air that is transported through ducts or for blast cooling of electronic and control enclosures where high velocity air is required.

Sizes: 16 Frame to 55 Frame
Air Delivery: 6.3 cfm to 3,000 cfm
Frequency: 60 HZ-400 HZ – DC and Brushless DC
Accessories: Outlet Flanges Inlet Rims – Inlet Cones
Inlet Filters. Boot Accommodations and Air Vane Switches.

Propeller and Tubeaxial Fans

Commercial and military propeller and tubeaxial fans are noted for their short axial length. This facilitates mounting in electronic compartments and cabinets where space is at a premium. Molded airfoil designed impellers provide high air flow at low noise levels.

Propeller Fans

Sizes: 3″ to 10.5″ diameter.
Air Delivery: 32 cfm to 1,100 cfm.
Frequency: 60 HZ – 400 HZ – Variable and DC.

Tubeaxial Fans

Sizes: 3.125″ Sq. to 12.25″ diameter round.
From 1.5″ deep to 3.75.″
Frequency: 60 HZ – 400 HZ – Variable.

Vaneaxial Fans

The vaneaxial fan is an axial flow airmover whose impeller hub is relatively large and which employs straightening vanes to recover a substantial portion of the pressure. The entire airmover – its motor, impeller and housing are a single source of responsibility. IMC features the Turbo-Slot® vaneaxial fan which produces high pressure at low speed, Mixed Flow fans which combine the space-saving advantages of the axial type fan with the desirable performance characteristics of the centrifugal fan and standard vaneaxial fans. "Hi-Slip" models for high altitude applications are available as well as many custom models to fit your specific needs.

Sizes: 1″ to 26″ diameter.
Air Delivery: 6.5 cfm to 12,000 cfm.
Frequency: 60 HZ – 400 HZ – DC and Brushless DC.
Motor driven and gear driven.

McLEAN PACKAGED COOLING EQUIPMENT

RACK—MOUNTED BLOWERS

Over 100 models available in any panel width. Heights from 3½" to 12¼". Airflows to 1000 CFM. Pressurize systems with cool, filtered air. Prevent dust from entering systems. Standard EIA notching. Quick, easy mounting. No cutting. No filing. Also Packaged Fans for pressurizing or evacuating. Four sizes. Airflows from 275 to 1200 CFM. All units available to Commercial, Military or EMI Shielded Specifications.

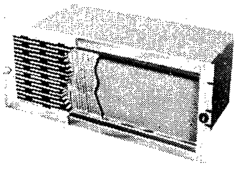
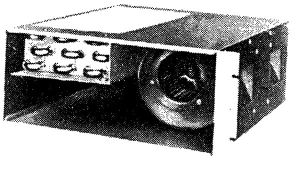
* ALL MODELS ARE 19" WIDTH EXCEPT IDB300 (HALF PANEL) ** ALL MOTORS ARE 115V 50/60 HZ
UL RECOGNIZED AND CSA CERTIFIED † MODELS AVAILABLE IN 24-48VDC
UNITS ALSO AVAILABLE TO OTHER RACK WIDTHS AND FOR RECESSED INSTALLATION



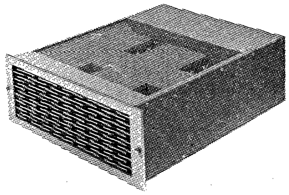
EMI—SHIELDED UNITS

All packaged blowers available with an EMI shield and wave guide media built into the airstream. Cuts signal leakage inward or outward.



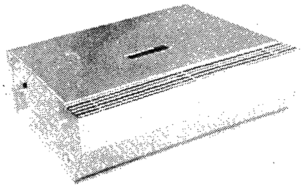
HEAT EXCHANGERS

Maintain cabinet temperature at 80°F maximum with 1 KW heat dissipation. Air recirculates in rack and is cooled by exchanger in blower case.



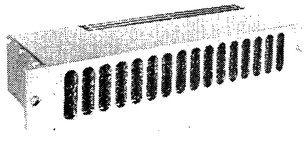
CARD COOLERS

Replaces bulky fan trays. High volume, high pressure filtered air. Low noise, compact, wide cooling discharge. Requires little panel space.



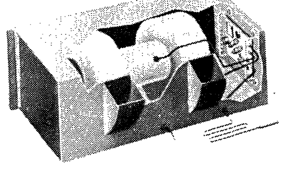
SIDEWINDER BLOWERS

More air. More pressure. Less space. Delivers 180, 350 or 550CFM in a 1/" wide airstream.



SLOT BLOWERS

Ideal for jam-packed circuitry. Delivers 150 CFM from a 3½" panel. Quiet.



SOLID STATE TEMPERATURE CONTROLLERS

Cuts noise level. Modulates blower speed. Keeps operating between 80-90°F. Costs less than air conditioning.

Also a broad line of accessory equipment including grilles, controls, etc.

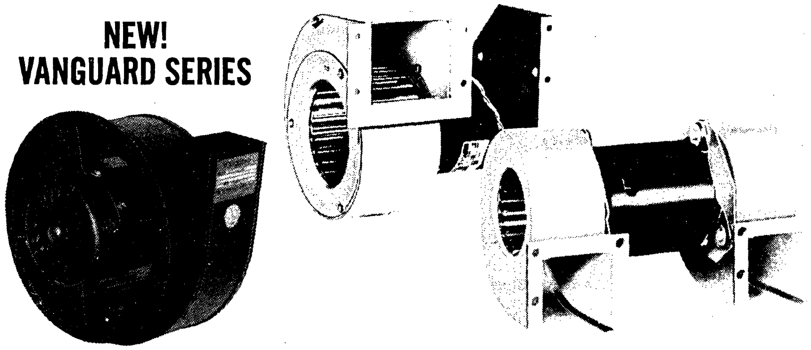
McLEAN SINGLE & DUAL CENTRIFUGAL BLOWERS

Fans—Orifice, Panel, Reversible, Filter Grille Panels

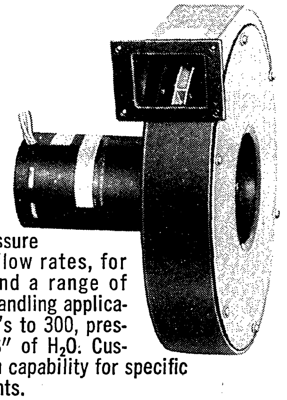
SINGLE & DUAL CENTRIFUGALS

Wide choice of static pressures— 0″ to 3.0″. Outputs range up to 2000 CFM. Wheel diameters range from 3″ to 12″. Motors supplied to any AC frequency or power, single or three-phase. Bearings properly loaded, double-shielded, permanently lubricated. Motors and wheels precision balanced for vibration-free performance. Motors, UL recognized and CSA certified. Units are also available in 24-48VDC.

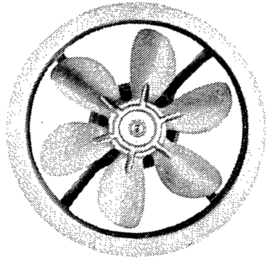
NEW! VANGUARD SERIES



RADIAL WHEEL BLOWERS

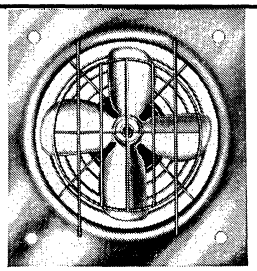


Higher pressure at lower flow rates, for cooling and a range of other air-handling applications. CFM's to 300, pressures to 8″ of H_2O. Custom design capability for specific requirements.



ORIFICE MOUNTED FANS

Push or pull airflow. CFMs 275, 300 or 395. Dim. 4″ x 8½″ or 4¾″ x 10¼″. Quiet, vibrationless 115V/50/60 Hz, 1600 RPM, or 3000 RPM.

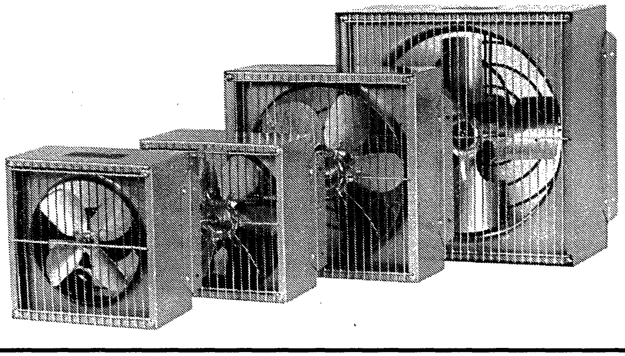


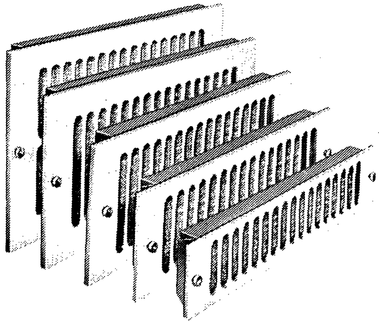
PANEL MOUNTED FANS

Low cost, long life, ready to mount, shaft in any position. 265 CFM, 3100 RPM, 115V/50/60 Hz. Dim. 9″ square panel on 7″ centers, 4²³⁄₃₂″ deep.

REVERSIBLE FILTER BOX PROPELLER FANS

MODEL 1RB65 delivers 275 cfm, 3100 rpm 4½″ deep x 8⅞″ square. MODEL 1RB80 delivers 450 cfm, 1650 rpm 4½″ deep x 8⅞″ square. MODEL 1RB100 delivers 725 cfm, 1600 rpm 4½″ deep x 12⅛″ square. MODEL 1RB120 delivers 1200 cfm, 1450 rpm 7⅜″ deep x 15⅛″ square. MODEL LA120 Back Draft Damper is used in conjunction with Model 1RB120. Louvers automatically open when power is applied and close when power is off. May be used in horizontal or vertical positions.





FILTER GRILLE ASSEMBLIES

For use in cabinets where louvered area is needed for ventilation. Supplied complete with dust filters and in panel heights of 3½″ to 10½″ and widths 9½″, 19″, 24″ and 30″.

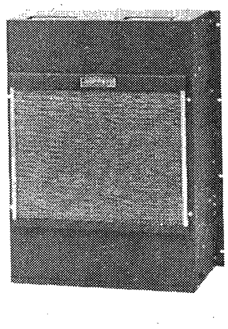
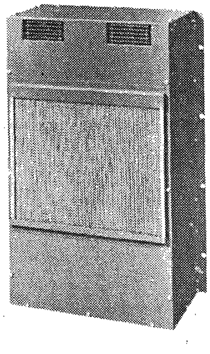
McLEAN MIDWEST AIR CONDITIONERS
For Electronics & Computer-Controlled Machine Tool Systems

SLIMBOY® SERIES 1200 TO 12000 BTU/HR

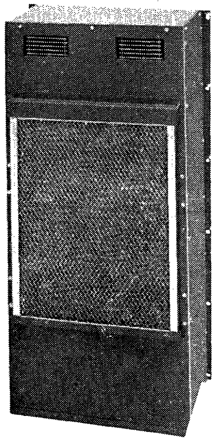
Cool & protect electronic control systems operating in harsh factory settings. "Closed-Loop" design constantly cools and recirculates internal cabinet air locking out heat, moisture & airborne particulates. Components are cooled by clean air only. Continuous duty to 20,000 hours assured at ambients to 125°F. Units mount quickly & easily. Available in 115V/50-60HZ, 115V/60HZ, 230V/50HZ and 230V/60HZ. Send for Condensed Catalog No. 8118 or specific folders indicated below.



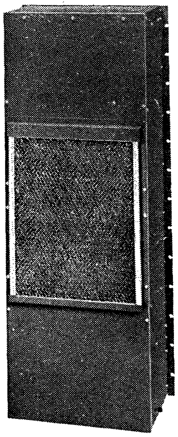
SLIMBOY® 24 SERIES
Capacity: 1400-2000-3000 BTU/HR. Reliable cooling for medium range use. Can be door, side or rack-mounted. 24" high, 9⅛" deep, 19" wide. Specify Catalog Folder 8121.



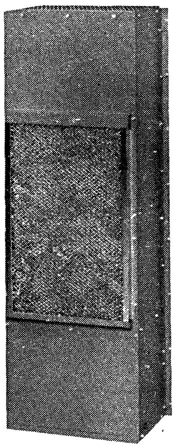
28 SERIES SLIMBOY®
Capacity: 2000-3000-4000 BTU/HR. Effective cooling in a 28½" high package that can be door-mounted, side-mounted or rack-mounted. 28½" high, 9⅛" deep, 19" wide. Specify Catalog Folder 8102.



36 SERIES SLIMBOY®
Capacity: 4000-5000-6000 BTU/HR. Large capacity cooling in a $36\frac{11}{16}$" high package that can be door-mounted, side-mounted or rack-mounted. $36\frac{11}{16}$" high, 10" deep, 19" wide. Specify Catalog Folder 8103.



47 SERIES SLIMBOY®
Capacity: 4000-5000-6000 BTU/HR. Fully interchangeable mounting with competitive models; a 47¼" high package for door-mounting, side-mounting or rack-mounting. 47¼" high, 10" deep, 19" wide. Specify Catalog Folder 8104.

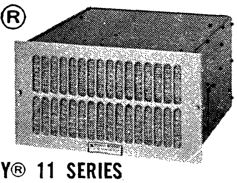


52 SERIES SLIMBOY®
Capacity: 5000-6000-7000-8000-9000-10000-12000 BTU/HR. Maximum range of capacities in a unit for door-mounting, side-mounting or rack-mounting. 52⅝" high, 9½" deep, 19" wide. Specify Catalog Folder 8105.

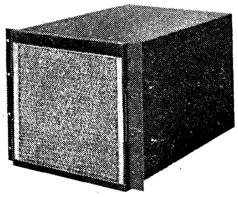
MICRO-MINI SLIMBOY®, HIBOY® & LOBOY® SERIES

MICRO-MINI SLIMBOY® 13 SERIES

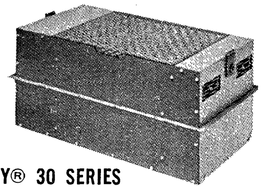
Capacity: 1200 BTU/HR @ 110°F. The 14⅛" width of the MICRO-MINI SLIMBOY® makes it an ideal unit for mounting on enclosures that are only 18" deep. 12⅞" high, 6¼" deep, 14⅛" wide. Specify Catalog Folder 8101.



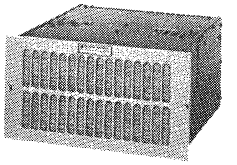
HIBOY® 11 SERIES
Capacity: 2000-3000-4000 BTU/HR. Unit can be rack-mounted inside the enclosure at the top or mounted outside the enclosure on the top surface. $10\frac{15}{32}$" high, 19⅝" deep, 19" wide. Specify Catalog Folder 8106.



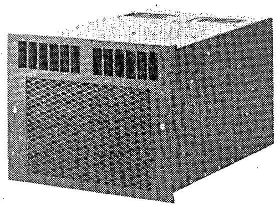
HIBOY® 16 SERIES
Capacity: 5000-6000-7000 BTU/HR. High capacity cooling for enclosures requiring inside or outside top-mounting installation. $15\frac{23}{32}$" high, 24" deep, 19" wide. Specify Catalog Folder 8107.



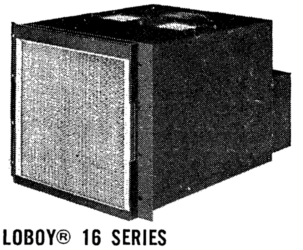
HIBOY® 30 SERIES
Capacity: 4000-5000-6000 BTU/HR. Large capacity package for mounting on top of the enclosure, partially recessed. Special models also available for mounting on the top surface of the cabinet. 14" high, 31⅜" long, 16⅜" wide. Specify Catalog Folder 8108.



LOBOY® 11 SERIES
Capacity: 2000-3000-4000 BTU/HR. Package for rack-mounting inside the enclosure near the bottom. $10\frac{15}{32}$" high, 19⅝" deep, 19" wide. Specify Catalog Folder 8109.



LOBOY® 14 SERIES
Capacity: 4000, 5000, 6000, 7000 BTU/HR. Mounts at or near bottom of enclosure. Cool air blows up. 14¾" high, $24\frac{11}{16}$" deep, 19" wide. Specify Catalog Folder 8120.



LOBOY® 16 SERIES
Capacity: 5000-6000-7000 BTU/HR. High capacity package for mounting inside the enclosure near the bottom. $15\frac{23}{32}$" high, 24" deep, 19" wide. Specify Catalog Folder 8110.

THOMCAT

McLEAN MIDWEST AIR-TO-AIR HEAT EXCHANGERS
For Electronics & Computer-Controlled Machine Tool Systems

McLean Heat Exchangers will remove up to 1000 watts of heat load from a sealed enclosure with only a 30°F temperature differential above the ambient, at a maximum ambient temperature of 125°F.

Heat Exchangers differ from air conditioners in that they can not cool the enclosure below the ambient temperature. But where the ambient air is not excessively hot or moisture-laden, and where the electronic controls can operate in an enclosure temperature slightly above the ambient, it's possible that a McLean Heat Exchanger can be used to transfer heat from inside the electronic enclosure to the outside atmosphere.

McLean Heat Exchangers employ the same closed loop design that's used in the McLean air conditioners. Hostile ambient air is sealed out of the cabinet. Clean air from the enclosure itself is continuously cooled and recirculated.

Full line of package configurations for door-mounting, side-mounting, rack-mounting and top-mounting. Operating temperature range: 0°F to 125°F. Special coating for heat pipe cores available when units are required to operate in corrosive environments.

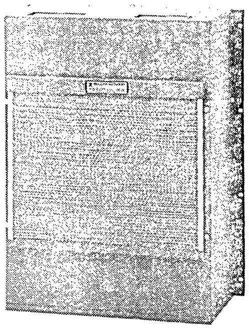
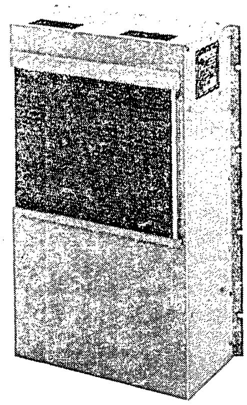
THOMCAT



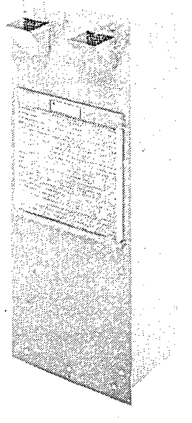
HE-24 SERIES

For door-, side-, or rack-mounting. 24" high, 9⅛" deep, 19" wide. Specify Catalog Folder 8122.



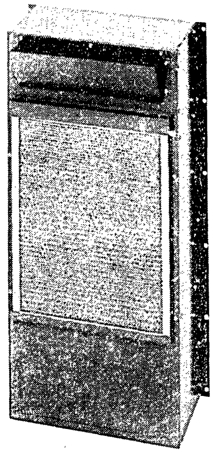
HE-28 SERIES

Unit can be door-mounted, side-mounted or rack-mounted. 28½" high, 8⅝" deep, 19" wide. Specify Catalog Folder 8111.



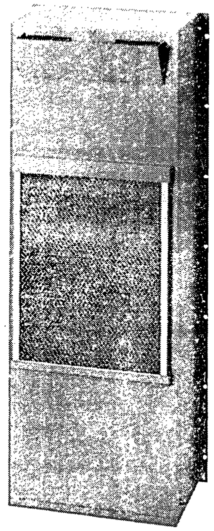
HE-33 SERIES

Narrow width makes it ideal for shallow enclosures. Can be door-, or side-mounted. 34¼" high, 9" deep, 13¾" wide. Specify Catalog Folder 8123.



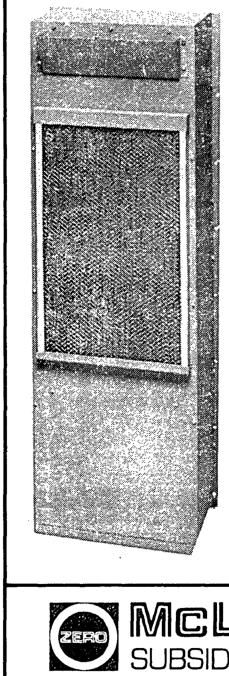
HE-36 SERIES

For door-mounting, side-mounting or rack-mounting. 36 11/16" high, 8⅝" deep, 19" wide. Specify Catalog Folder 8112.



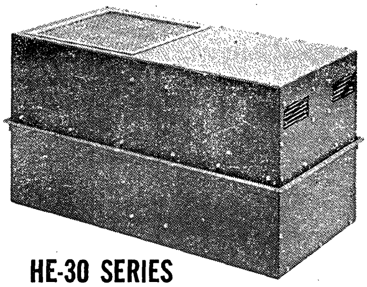
HE-47 SERIES

Package can be door-mounted, side-mounted or rack-mounted. 47⅛" high, 8⅝" deep, 19" wide. Specify Catalog Folder 8113.



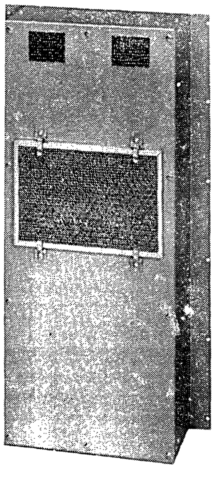
◀HE-52 SERIES

For mounting on door, side or rack. 52 9/16" high, 9½" deep, 19" wide. Specify Catalog Folder 8114.



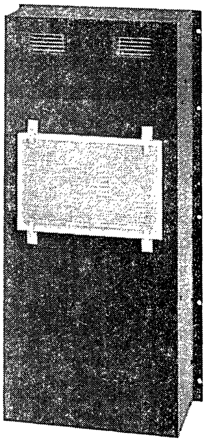
HE-30 SERIES

For mounting on top of the enclosure, partially recessed. Special models also available for mounting on the top surface of the cabinet. 16¾" high, 31⅜" deep, 16⅜" wide. Specify Catalog Folder 8115.



◀HP-3600 SERIES

For mounting on door, side or rack. 36¾" high, 7" deep, 19" wide. Specify Catalog Folder 8116.



HP-3800 ▶ SERIES

For mounting on door, side or rack. 38⅛" high, 8" deep, 19" wide. Specify Catalog Folder 8117.

SOLID STATE COOLING WITH THERMOELECTRICS

Thermoelectric (Peltier) Heat Pump Module Specifications

Thermocouples constructed of N & P elements of highest grade bismuth telluride in form of oriented polycrystalline ingots. Ingot ends soldered to copper bus bars interfaced with ceramic plates, affording good mechanical integrity, high dielectric strength and thermal conduction. Temperature range, −150°C to +110°C. Solid state construction. Both hot and cold faces lapped flat, TYPE L. Both faces metallized and tinned, TYPE TT. Hybrid, hot face tinned, cold face lapped, TYPE TL.

SOLID STATE COOLING WITH THERMOELECTRICS

How To Use Universal Performance Graphs:

APPROACH #1: Convert universal scale values to those of specific module selected:

1. Convert Q_c/GxN (scale values) to Q_c (watts heat pumped): Multiply Q_c/GxN values by module GxN (from table in module specifications chart).

2. Convert V/N values to V (volts input): Multiply V/N values by module N from table.

3. Convert 50 G, 40 G, etc. to I (amps input) values: Multiply 50 by module G, etc.

APPROACH #2: From application, knowing required Q_c, T_c and T_h, select appropriate module:

1. Calculate $\triangle T = T_h\text{-}T_c$; select operating current I (I max = 50 G).

2. From universals, obtain Q_c/GxN. Calculate GxN.

3. Select appropriate module from GxN table in module specifications chart.

EXAMPLE: Required Q_c = 31 Watts, T_c = +5°C, T_h = +35°C

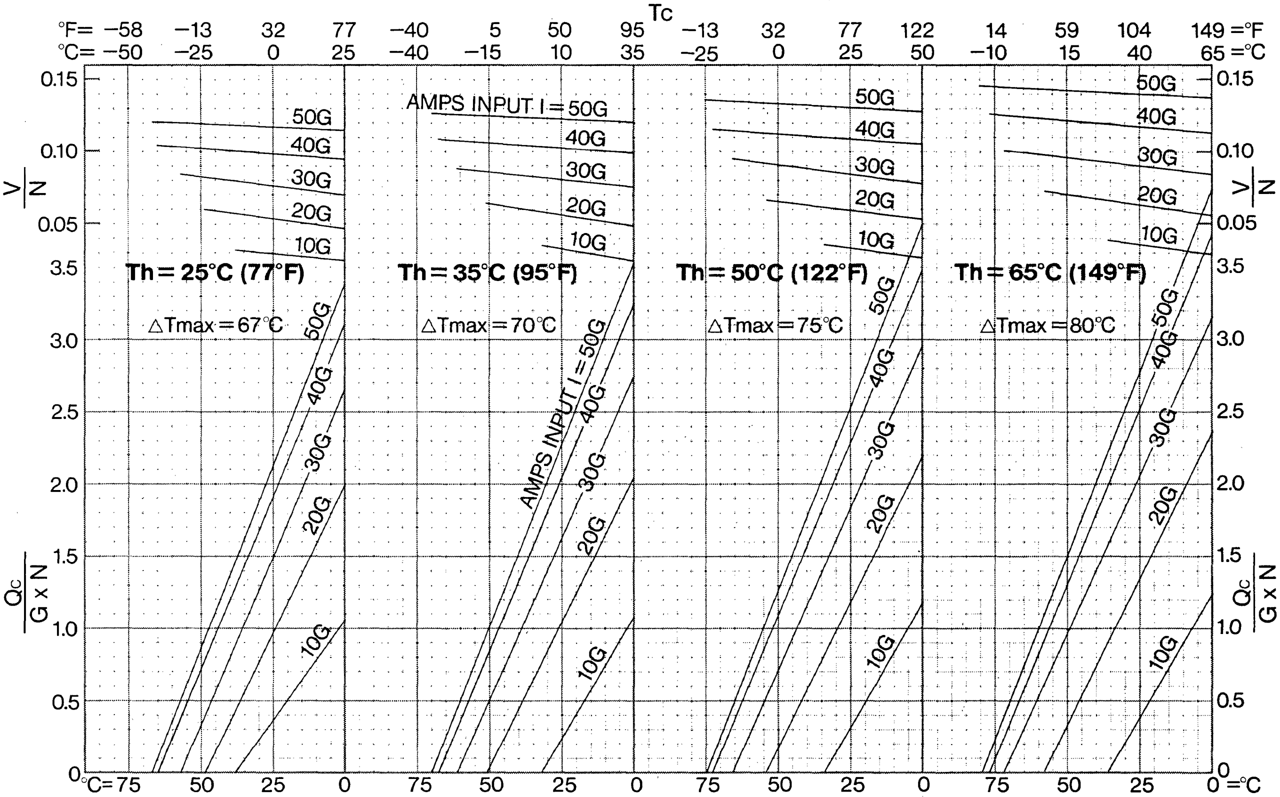
1. $\triangle T = 35° - 5° = 30°C$. Choose operating current (typically from 30 G to 40 G) at 35 G (equals 35/50 = 70% of I max.)

2. From T_h = 35°C graph ($\triangle T$ = 30°, I = 35 G), obtain Q_c/GxN = 1.65; Then GxN = Q_c/1.65 = 31/1.65 = 18.8.

3. Choose module with GxN ≥ 18.8; choose CP1.4-127-045 (GxN = 21.6) or CP2-71-06 (GxN = 19.9).

If desired, approach #1 may now be followed for module selected.

Model CP1.4 - 127 - 06L
CP Series, Type L
1.4 x 1.4mm Thermoelement Cross Section
127 Thermocouples
.06″ Thermoelement Height



UNIVERSAL PERFORMANCE GRAPHS

Tc = Cold Face Temperature; Th = Hot Face Temperature; I = Module Current, Amps; V = Module Voltage, Volts; Qc = Watts Heat Pumped; N = Number of Thermocouples; G = Thermoelement Geometry Factor

Special Heat Pump Assemblies

Special assemblies are available in O.E.M. quantities, designed to customer requirements using heat exchangers furnished by customer or by Melcor. Multistage cascades also available in standard and custom configuration, with temperatures to −95°C (6 stage). Ceramic construction with solder interfacing between stages.

...THE NAME FOR MINIATURE FANS, AC AND DC
...THE NAME FOR THE ULTIMATE IN QUALITY AND RELIABILITY

MICRONEL miniature fans are in service all over the world. MICRONEL miniature fans are demonstrating their dependability in equipment used in space, installed in precision miniature equipment and in medical and optical apparatus. High air delivery with minimum bulk is the result of optimized designs.

MICRONEL is the only manufacturer in the world with a complete range of miniature fans (from 1 inch diameter and up). After 20 years of experience, we now manufacture more than 200 different types: one of them is the solution to your problem.

DC FANS

DC fans are supplied in diameters from 1 inch to 3 inches and in square form 1 × 1 inches to 3 × 3 inches. With nominal voltages of 6, 12, and 24 V available, the speed range lies between 1,000 and 13,000 rpm. By varying the voltage the speed can be optimally matched to requirements. High efficiency motors of the V-series have ironless basket armatures with permanent magnet stators. Commutation is by metal or graphite brushes and a cylindrical commutator of precious metal alloy.

The **electronically commutated disc-motor** of the **F-series** is especially suited for ultra-slim fans. Patent applications for these fans have been filed world wide.

AC FANS

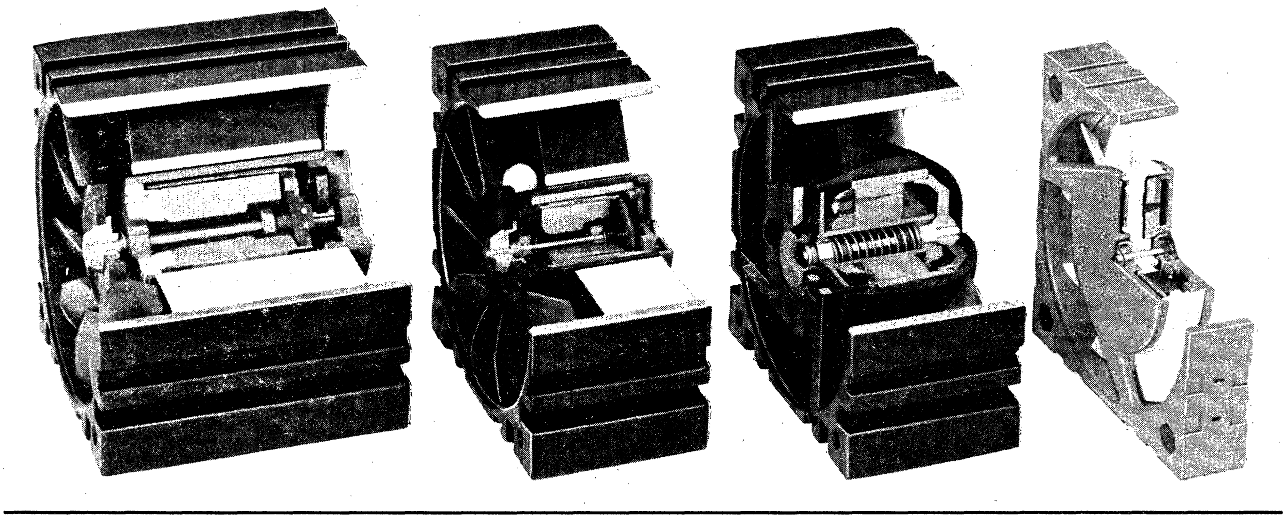
AC fans are supplied in diameters from 1.42 inches to 3.1 inches and in square sizes of 1.5 × 1.5 to 3.1 × 3.1 inches, with voltage ratings of 12, 24, 115 and 220 V, 50/60 Hz. Speed is 3,000 or 3,600 rpm at nominal voltage according to frequency. The hysteresis motors have quadrature windings. With some models the necessary capacitors are built in. The aerodynamically designed blades are mounted on a ferromagnetic rotor. Speed control is possible within a certain range by varying the frequency. Salient features of this motor type are very quiet running and long life.

QUALITY CONTROL

With the proven designs, production facilities reflecting the latest state of the art, and high-grade materials, MICRONEL provides the basis for an unvarying quality standard, which is assured by:

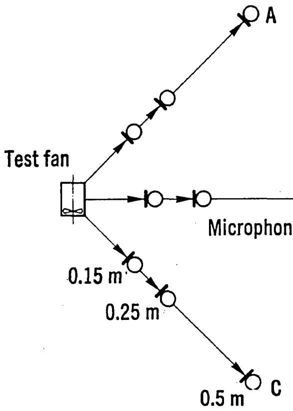
1. INCOMING INSPECTION
   Random tests on individual parts or 100% inspection, depending on complexity.
2. IN PROCESS INSPECTION
   Random checks and in some cases 100% inspection on sub-assemblies at various production stages.
3. FINAL INSPECTION
   No fan leaves our plant without thorough testing of the following:
   — current input
   — revs per minute
   — noise and vibration
   — visual inspection
   — brush pattern (by oscilloscope) on DC fans
   — high voltage tests (with 115/220 VAC)
   — periodic testing of flow rate
   — pressure/suction and acoustic emission
4. PROTECTION
   All fans built by MICRONEL satisfy protection class IP40. Special tests can be carried out on request.
   UL and CSA recognized fans are marked with the respective symbol.
5. LONG-TERM TESTS
   Intensive test runs are performed under various temperature conditions (20°C/45°C/60°C). Great importance is attached to these tests, for they indicate any shortcomings in design, production or materials. Individual tests often take years, yielding information on the life expectations of the different types. The expected life specified in the technical data is based on the Weibull distribution method, which means that 90% of the fans will exceed the value stated (Weibull B10).

MICRONEL'S broad experience and technical expertise in development and design of high performance precision motors and assemblies has been utilized to develop the product shown herein. Our appreciation of the customer's system performance requirements, thermal constraints, mechanical interfaces, and cost factors allows MICRONEL U.S. to offer unique solutions to your problems. TRY US!



NOISE TEST SET-UP

ACOUSTIC EMISSION LEVEL



Noise measurements in accordance with DIN 45635 are carried out in an anechoic chamber with a basic noise level not exceeding 13 dB(A). The fans are mounted with free discharge in a soft suspension. Minimum distance from floor and walls is 1 m.

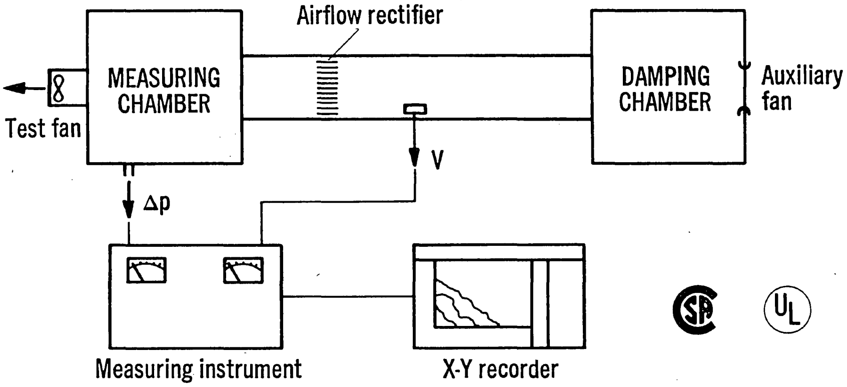
All acoustic emission graphs show mean values.

Evaluation was by the use of three measuring points A, B, C and related to a distance of 1 m.

The acoustic emission graphs also show the corresponding dB(A) values at nominal speed, at 30% below nominal speed and 30% above nominal speed.

AIR DELIVERY

AIRFLOW PERFORMANCE



For measuring the air delivery, a test station was constructed based on the latest available knowledge. It meets the demand for reproducibility of Δp/V values and accommodates all fan sizes. The The measuring principle corresponds with DIN 24163.

The fan to be measured is mounted free-blowing and free-sucking in the cubical chamber in a manner to allow recording on the suction side. The difference in pressure, Δp, is measured in the measuring chamber and the air flow in the measuring tube. Data of the flow rates obtained are transformed into electrical values which are recorded on an X-Y recorder. The graph is plotted using a damping device and an auxiliary fan.

NOISE MEASUREMENTS

CONVERSION OF MEASURING UNITS:

1 l/min = 0,0353 CFM
1 CFM = 28,31 l/min
1 mbar = 10,197 mm H_2O = 0.4 inches H_2O
1 Pa = 10^{-2} bar = 0,10197 mm H_2O = .04 inches H_2O

UL RECOGNIZED

The following models have been tested by Underwriters Laboratories Inc. and bear their symbol:
V621L, V623L, V624L, V631L, V72JM, V72PM, V72TL, V72AB
Nominl voltages 6, 12, 15, 24, 30, 36, 48, 115 and 220 Volts.

CSA RECOGNIZED

MICRONEL has applied for Canadian Standards Authority approval for the following fans:
V621L, V623L, V624L, V631L, V72JM, V72PM, V72CL and V72TL with nominal voltages from 12 to 48 Volts.

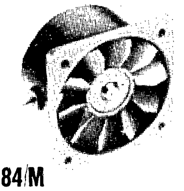
V581L



V584M

- ☐ Housing and motor support of black anodized aluminum. Types V571 and V579 alternatively available also in black glass-fiber-reinforced plastic
- ☐ Black polyphenylene oxide, UL 94 V-1 20% glass fiber
- ☐ Flange types for simple mounting with M3 screws
- ☐ V571 and V579 mounting with M3 screws on front, rear or side of fan
- ☐ Electrical connection with red and black stranded wires

TECHNICAL DATA

Nominal voltage	U_N	6	12	V
Nominal current max.	I_N	60	35	mA

ACCESSORIES

GENERAL

These grids of appealing design are provided to protect the fan aperture. They are also serving as finger protection and thus satisfy the safety class IP 20 according to DIN 40050.

The protection grids are made of aluminium of .08 inches thickness in black finish.

Air delivery will be slightly reduced with the use of grids.

CAPACITOR MODULES

GENERAL

Capacitor modules are available to adapt the fan to the supply voltage. The modules also contain the auxiliary starter capacitors.

The box and lid are of glass-fiber-reinforced black plastic. Mounting by use of two M3 screws. Electrical connection as per diagram.

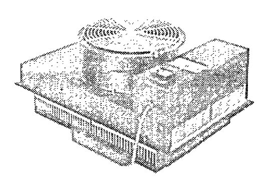
AIR CONDITIONERS

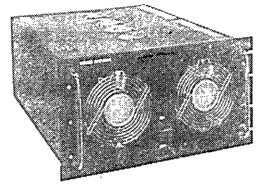
Temperature Control...

Solid State Cooling & Heating From One Product.

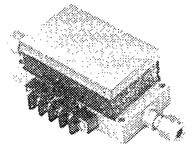
Thermoelectric Air Conditioners are a solid state method of refrigeration, which eliminates the need for a compressor, refrigerant fluids or piping. The only moving parts are highly reliable fans used to dissipate output heat to the ambient air. These air conditioners can be applied in computers, machine tool controls, instrumentation & electronics for hostile environment protection. They offer design flexibility in a wide range of industrial and consumer applications where compactness and reliability are key.



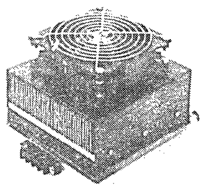
AHP-1700



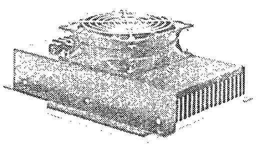
AHP-3000



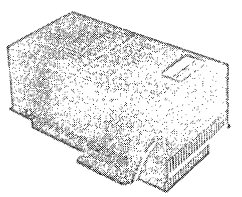
LHP-150



LHP-800



AHP-300



AHP-1000

Features:

- *No load cooling to −5°F (−20°C) at room temperature*
- *Lightweight, compact designs*
- *No compressor, no fluids, no coils*
- *Closed system protection from dust, chips, & moisture*
- *No moving parts except fans, means high reliability*
- *Low vibration, noise & maintenance*
- *Metal finishes resist corrosion*
- *Operates in any orientation - horizontal, vertical, etc.*
- *All models available from stock*

Other Products:

- Liquid cooled air conditioners rated to 1500 BTU/HR
- Thermoelectric cooling modules
- Temperature controllers
- Standard DC power supplies

AHP-3000
Rating: 2100 BTU/hr.
Overall Dimensions: 19.0W x 23.75L x 10.50T

AIR CONDITIONERS (LIQUID COOLED)

LHP-150, with Cold Plate
Rating: 135 BTU/hr.
Overall Dimensions: 2.7W x 5.2L x 1.65T
LHP-300, with Cold Plate
Rating: 205 BTU/hr.
Overall Dimensions: 6.0W x 4.5L x 1.65T
LHP-300, with Cold Sink and Fan
Rating: 305 BTU/hr.
Overall Dimensions: 6.0W x 4.5L x 4.75T
LHP-800, with Cold Plate
Rating: 740 BTU/hr.
Overall Dimensions: 6.225W x 7.93L x 1.78T
LHP-800, with Cold Sink and Fan
Rating: 740 BTU/hr.
Overall Dimensions: 6.225W x 7.93L x 5.73T
LHP-1700, with Cold Side Fin and Fan
Rating: 1500 BTU/hr.
Overall Dimensions: 7.0W x 19.0L x 8.67T

TEMPERATURE CONTROLLERS

TC-2, Cool Mode
Range: +20°C to 50°C
TC-106, Cool Mode
Range: −39.9°C to +39.9°C
Overall Dimensions: 3.25H x 6.0W x 6.18D
TC-107, Heat Mode
Range: −55°C to +150°C
Overall Dimensions: 3.25H x 6.0W x 6.18D
TC-108, Heat-Cool Mode
Range: −55°C to +150°C
Overall Dimensions: 3.25H x 6.0W x 6.18D

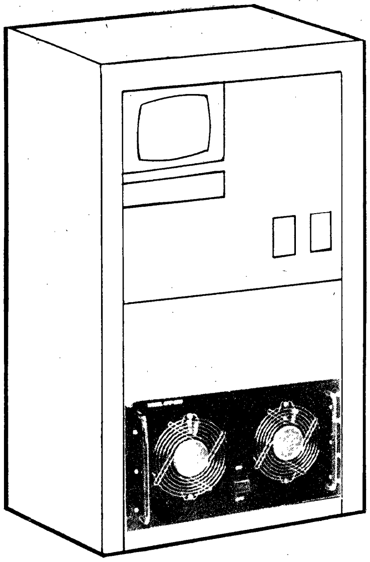
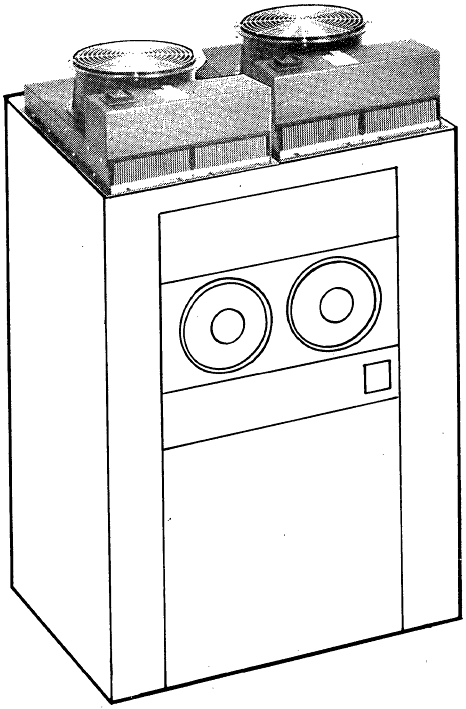
Air Conditioners for Enclosure Cooling

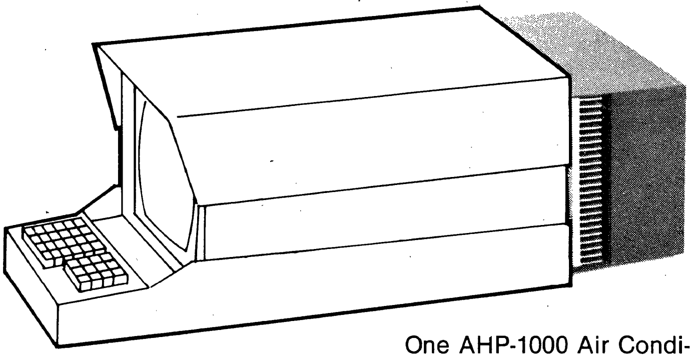
Typical Applications include: Computers, machine tools, instrumentation and electronic component or package cooling.



An AHP-3000 Air Conditioner utilized on a CNC Machine. Where ultimate efficiency requires precise temperature control. The most powerful solid state air conditioner available. Weighs under 100 lbs. and mounts in standard 19" cabinet rack.



Two AHP-1700 Air Conditioners are attached to this enclosure that houses disk drives and microprocessor controls, in a NEMA 12 environment. Standard 19" rack and integral power supply allow for ease of mounting and direct operation from 115 Volt A.C. Weighs under 50 lbs.



One AHP-1000 Air Conditioner, TECA's most versatile unit, mounted to the rear of a programmable controller with CRT display. It's applications range from the factory to the laboratory. A very compact size and weighs under 26 lbs.

AS EASY AS 1,2,3...

AIR CONDITIONERS

Specified To Your Applications

It's as easy as 1,2,3. Just a telephone call, and you're in direct contact with one of our application engineers who can answer and solve your enclosure cooling requirements.

1

Just provide the necessary information below, and we will determine the correct air conditioner.

- **Total exposed exterior enclosure surface area of cabinet.**
- **Electrical heat load inside the cabinet.**
- **The outside ambient temperature and desired inside temperature (maximum and minimum).**

2

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire gauge

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct current
DIAC bidirectional trigger diode
DIL dual in-line
DIN Deutsche Industrie Normenausschuss
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EMP electromagnetic pulse
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IDC insulation displacement contact
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LIF low insertion force
LNA low noise amplifier
LNB low noise band
LSI large scale integration
LVDT linear velocity displacement transformer

M

MASER microwave amplification by stimulated emission of radiation
MATV master antenna television
μF microforad
MHz megahertz
MIPS million instructions per second
MIB microcomputer interface board
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOSIGT metal-oxide semiconductor insulated-gate transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NEMP nuclear electromagnetic pulse
NIM nuclear instrumentation module
NOR not OR
NTC negative temperature coefficient

O

OCR optical character reader
OEM original equipment manufacturer
OR a logical operator

P

PC printed circuit
PCB printed circuit board
pF picofarad
PGA pin grid array
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PLL phased lock loop
PPI plan position indicator
PROM programmable read only memory
PTC positive temperature coefficient
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SCS silicon controlled switch
SDA source & detector assemblies
SIDAC bidirectional voltage-triggered switch
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic
SUS silicon unilateral switch

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TRIAC bidirectional AC switch
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UJT silicon unijunction transistor
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VME virtual machine environment
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

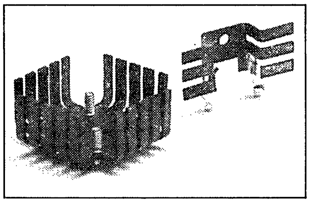
YIG yttrium iron garnet

Z

ZIF zero insertion force

Thermalloy Inc.

The Innovator in semiconductor accessories.

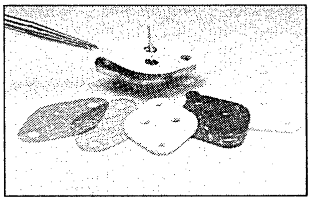


Heat Sinks

- Labor saving.
- Wave solderable using solderable studs, solderable nuts or solderable mounting tabs.
- Vertical and horizontal mount.
- Wide variety of shapes and sizes.

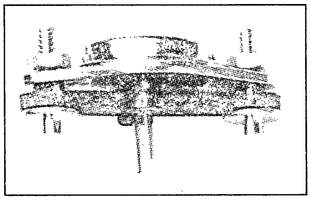
Card Guides, Ejectors and Pullers

- Variety of sizes and shapes.
- A choice of labor saving press-fit card guides or hardware mounted for secure mounting.
- Ejectors and pullers available in one piece snap-on or conventional with roll pin.



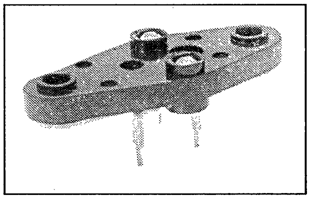
Insulators

- Mica
- Thermalfilm™ (polyimide plastic film)
- Thermalsil™ (silicone rubber)
- Hard Anodized Aluminum
- Aluminum Oxide
- Beryllium Oxide
- Insul-Cote™ — packaged, pre-coated insulators for easy installation.



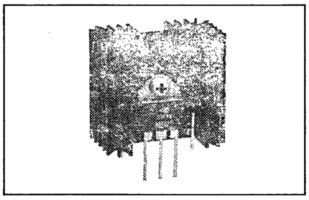
Solderable Transistor Mounts

- Cuts assembly steps by 50%.
- Eliminates hand soldering.
- Tin plated posts offer excellent solderability for mechanical and electrical integrity.
- All work is done from one side of board.
- Reduces hardware requirements.
- Elevates device for cleaning.



Power Sockets

- Tin plated.
- For TO-3 case styles.
- Inexpensive laminated power sockets also available.
- Metric and English mounting plate threads.
- Available with complete mounting kits.



Extruded Heat Sinks

- Over 250 standard, tooled shapes immediately available.
- Custom design — call on our engineers for your custom design needs.

Offering the widest variety of semiconductor accessories in the industry. For a free catalog, contact your nearest Thermalloy representative or distributor.

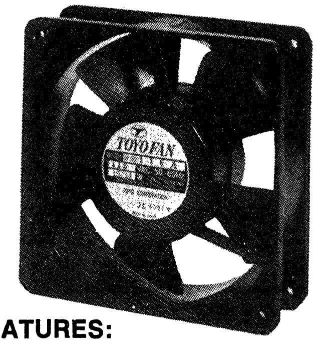
U.S. TOYO FAN CORPORATION

4915 Walnut Grove Avenue
San Gabriel, California 91776
(818) 287-5297
TWX (910) 589-1540

TF120 Series

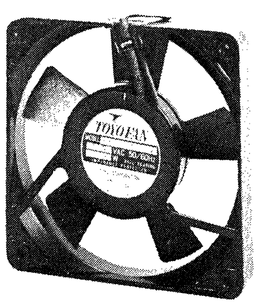


FEATURES:

- 4.70″ sq. x 1.50″ deep (119.5mm x 38mm)
- 104 to 76 CFM free air delivery
- Choice of three speeds for various applications
- Noise rating as low as 38 dB(A) at 1.5m
- Precision ball bearings provide long service life
- Rugged die cast aluminum frame
- Choice of 115VAC or 230VAC
- Choice of terminals or wire leads
- Impedance protected
- U.L. recognized — File No. E75082
- CSA certified — File No. LR48371
- Also available in dual voltage fan Model TF120345 Series

ULTRA THIN FAN

TF120RX Series

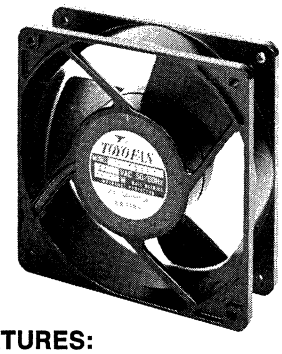


FEATURES:

- The thinnest axial fan available — .787″ (20mm) thick
- High performance
- Low noise level
- Precision ball bearings provide long service life
- Durable die cast aluminum frame
- Choice of 115VAC or 230VAC
- Impedance protected
- U.L. recognized — File No. E75082
- CSA certified — File No. LR48371

QUIET FAN

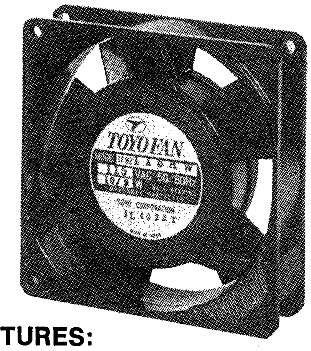
TF120U Series



FEATURES:

- Designed for low noise level applications
- Precision ball bearings provide long service life
- Durable die cast aluminum frame
- Choice of 115VAC or 230VAC
- Impedance protected
- U.L. recognized — File No. E75082
- CSA certified — File No. LR48371

TF92 Series

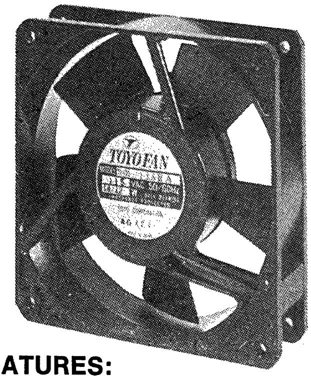


FEATURES:

- Less than 1 inch deep
- 3.62″ sq. x .98″ deep (92mm x 25mm)
- 34 to 27 CFM free air delivery
- Choice of three speeds for various applications
- Noise rating as low as 32 dB(A) at 1.5m
- Precision ball bearings provide long service life
- Rugged die cast aluminum frame
- Choice of 115VAC or 230VAC
- Choice of terminals or wire leads
- Impedance protected
- U.L. recognized — File No. E75082
- CSA certified — File No. LR48371
- Also available in dual voltage fan Model TF92345 Series

THE THIN FAN

TF120R Series

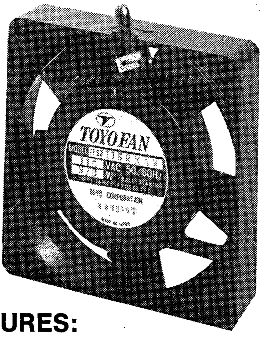


FEATURES:

- Less than 1 inch deep
- 4.70″ x .98″ deep (119.5mm x 25mm)
- 92 to 76 CFM free air delivery
- Choice of two speeds for various applications
- Noise rating as low as 34 dB(A) at 1.5m
- Precision ball bearings provide long service life
- Rugged die cast aluminum frame.
- Choice of 115VAC or 230VAC
- Impedance protected
- U.L. recognized — File No. E75082
- CSA certified — File No. LR48371

ULTRA THIN FAN

TF92RX Series



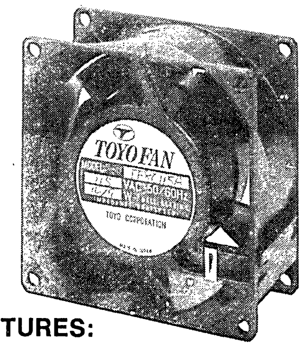
FEATURES:

- The thinnest axial fan available — .787″ (20mm) thick
- High performance
- Low noise level
- Precision ball bearings provide long service life
- Durable die cast aluminum frame
- Impedance protected
- U.L. recognized — File No. E75082
- CSA certified — File No. LR48371

U.S. TOYO FAN CORPORATION

4915 Walnut Grove Avenue
San Gabriel, California 91776
(818) 287-5297
TWX (910) 589-1540

TF80 Series

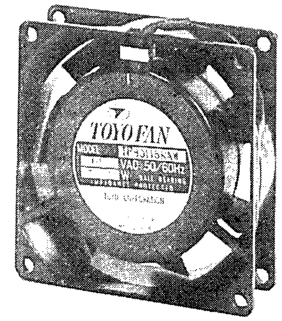


FEATURES:

- Low profile design — 3.15″ sq. x 1.50″ (80mm x 38mm)
- High performance airflow
- Low noise level
- Precision ball bearings provide long service life
- Rugged die cast aluminum frame
- Choice of 115VAC or 230VAC
- Choice of terminals or lead wires
- Impedance protected
- U.L. recognized — File No. E75082
- CSA certified — File No. LR48371
- Also available in dual voltage fan Model TF80345 Series

SMALL-THIN FAN

TF80R Series

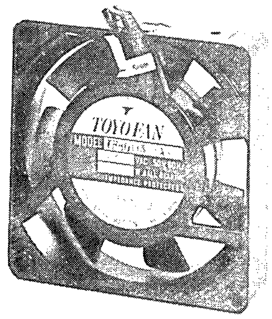


FEATURES:

- Low profile design — 3$^1/_8$″ square
- Less than 1 inch thick — .984″ (25mm)
- Precision ball bearings provide long service life
- Durable die cast aluminum frame
- Choice of 115VAC or 230VAC
- Impedance protected
- U.L. recognition and CSA certification pending

SMALL-ULTRA THIN FAN

TF80RX Series

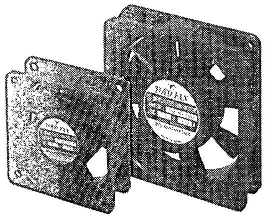


FEATURES:

- The thinnest axial fan available — .787″ (20mm thick)
- Low profile design — 3$^1/_8$″ square
- High performance
- Low noise level
- Precision ball bearings provide long service life
- Durable die cast aluminum frame
- Choice of 115VAC or 230VAC
- Impedance protected
- U.L. recognition and CSA certification pending

DC BRUSHLESS

TFDD60RX Series & TFDD80RX Series

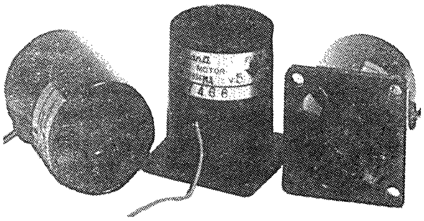


FEATURES:

- Minimum EMI/RFI emission
- High efficiency solid state design
- High performance airflow
- Precision ball bearings provide long service life
- 2.36″ square x .90″ thick—TFDD60RX
- 3.15″ square x .90″ thick—TFDD80RX
- Low acoustical noise
- Available in 12 and 24 Volts
- Polarity protected
- Impedance protected

DC MICRO FAN

SMF1836 Series

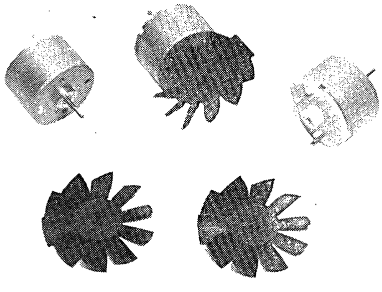


FEATURES:

- Provides cooling in extremely confined areas
- Compact-miniature size — 1.42″ diameter x 1.77″ long
- High performance
- Choice of 5, 10, 12, and 24VDC
- Choice of optional mounting flanges

DC MINI FAN

SL510 Series



FEATURES:

- Low cost
- Miniature size — 1.50″ long x 1.72″ diameter including impeller
- Low acoustical noise
- Dependable performance

WARRANTY — All U.S. Toyo fans are warranted to be free of defects in materials and workmanship for a period of one year from date of delivery.

AIRFLOW PERFORMANCE DATA — Performance data obtained with test chamber and methods in accordance with AMCA Standard 210-74.

ACOUSTICAL NOISE DATA — Acoustical measurements made at distances of 1.0 and 1.5 meters from fan intake. All measurements made on dB (A) scale. Fans operating at 60Hz line frequency.

OPERATING TEMPERATURE — Recommended ambient operating temperature is −30°C to +70°C.

IMPEDANCE PROTECTION — All fans are designed and manufactured to prevent "burn-out" failure caused by restriction of rotating parts.

LIFE EXPECTANCY — Life test data available on request.

SAFETY — All fans are designed and manufactured to meet UL and CSA standards. Approved fans are listed as follows: UL File No. E75082 and CSA File No. 48371M2.

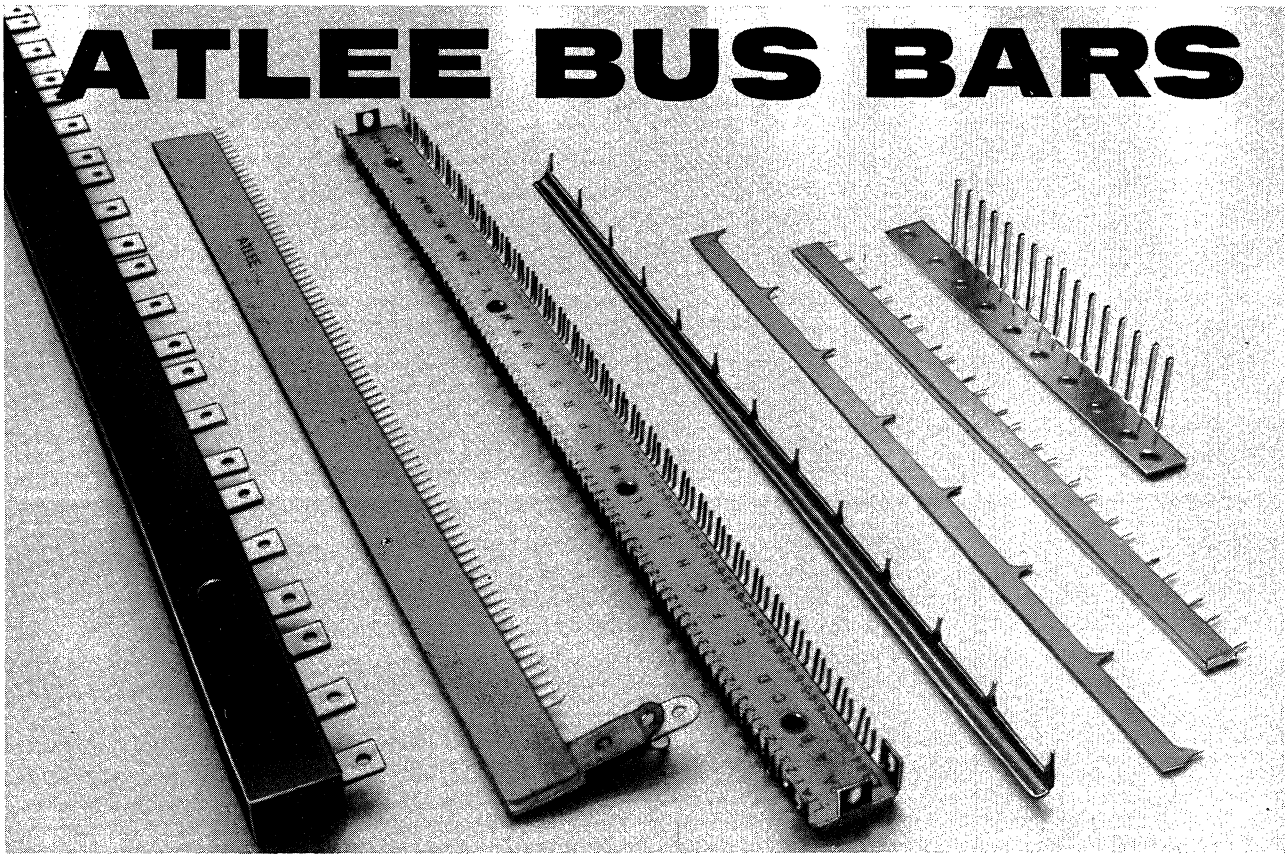
ATLEE BUS BARS



Atlee is a full line manufacturer of bus bars, serving the computer industry, avionics, military contractors and various high tech manufacturers. We have available design and engineering services as well as prototype department. In addition, Atlee has sales representatives nationwide to service our customers. Please contact Atlee to service your bus bar requirements.

TO SPECIFY AN ATLEE BUS BAR

Please contact the factory for a bus bar catalog and any questions you may have.

TO SPECIFY A CUSTOM BUS BAR

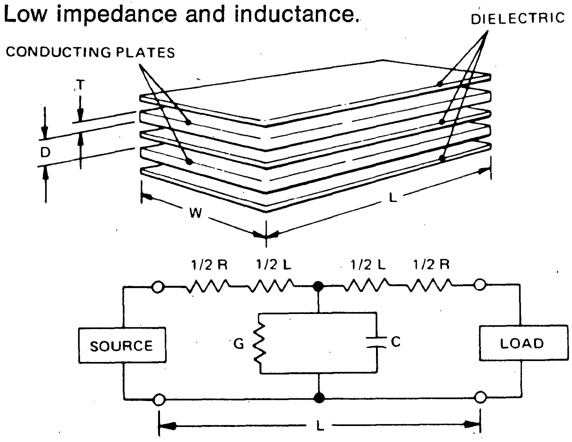
If your requirements do not permit the use of an Atlee Standard Bus Bar, send a drawing print or even a rough sketch of the Bus Bar that would meet your specifications and let Atlee's Sales Engineering Department work out the details and give you a quotation. Atlee will manufacture any type bus bar to your specifications. In general the information required includes:

1. Application and quantity
2. Space available
3. Current paths required
4. Type of terminations
5. Number and location of terminations
6. Current requirements
7. Voltage drop requirements
8. Tab to tab spacing on each conductor
9. Type of mounting
10. Capacitance desired
11. Dielectric strength
12. Environmental requirements
13. Type finish on conductors
14. Marking
15. Quantity

DESIGNER'S NOTES

Atlee laminated bus bars consist of flat conductor layers stacked on one another and separated by appropriate dielectrics. Typically such an assembly is laminated and edge-sealed or encapsulated so that the final product becomes a rigid unit with high reliability and stable electrical and mechanical properties. These properties provide uniform capacity, low impedance, and high-speed transmissions of signal and current. Atlee bus bars are an economical alternative to multi-layer printed circuit boards and wire harnesses. They offer:

- Lowered production costs, because assembly is simple and fast.
- Reduced volume which permits higher density packaging than possible with wire harnesses.
- Reduced noise with ideally distributed capacitance and isolation of conductors.
- High current-carrying capacity.
- Low impedance and inductance.

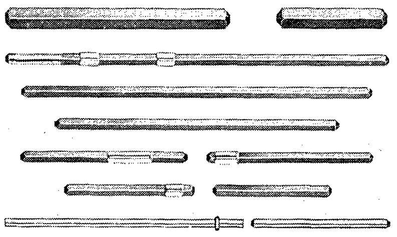


ATLEE

1 GILL STREET, WOBURN, MA 01801 • (617) 933-3510 • TELEX 949407

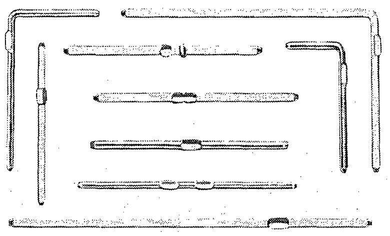
Precision formed and plated metal parts for electronic and electrical applications.

WRAPOST® TERMINALS



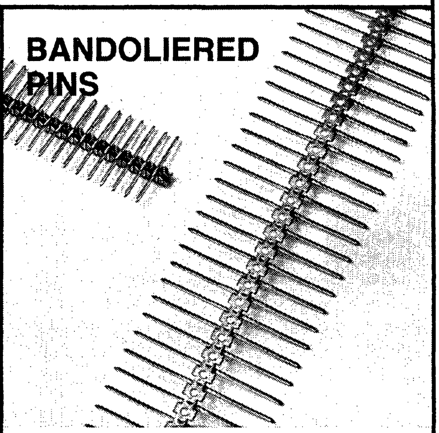
Industry's finest. Square and/or round, .025" or .045", up to 3" lengths, single or double locking stars. Standard and custom sizes.

FLAT CABLE HEADER PINS



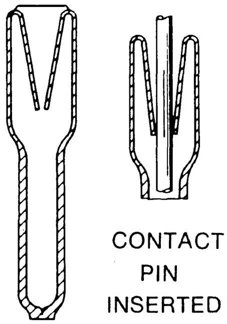
Provides smooth mating in female connectors. Straight or 90°, with or without locking stars. Lead-in angles perfectly blended for low insertion force.

BANDOLIERED PINS



Standard and custom bandolier styles. In-house selection plating allows zone or striped plating to cut precious metal plating costs.

SPRING SOCKET PINS

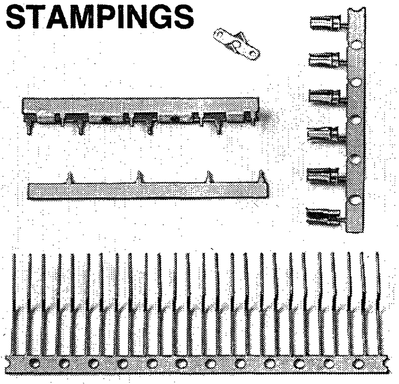


Low cost, low profile spring socket pins. Accepts .185" lead length . . . used in .075" and up grids. Takes round or square pins without orientation.

DIE SWAGED PARTS

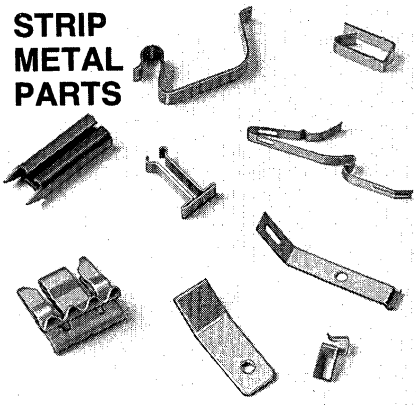
Cut cost of screw machine parts by 50–70%. High speed, scrapless forming to precision tolerances.

STAMPINGS



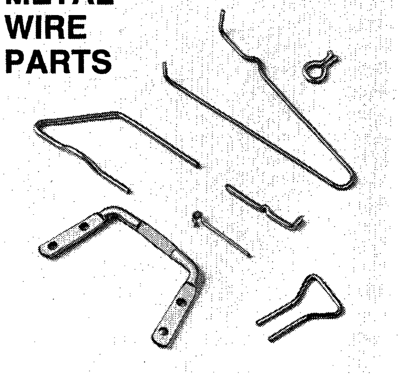
Simple blanking to complex forming with progressive dies.

STRIP METAL PARTS



Tubular parts or complex stampings. Our fourslide expertise can help cut your part costs.

METAL WIRE PARTS



Intricate forming even in difficult materials. Capability includes combination wire and strip metal parts.

Auto-Swage specializes in high speed, precision forming of terminals, pins, contacts, leads, spacers, clips, sockets, etc. Die swaging, pin rolling, fourslide forming and stamping operations allows selection of lowest cost forming method. In-house plating (both barrel and selective zone) assures single source responsibility on all your orders. Send parts today for our quotation.

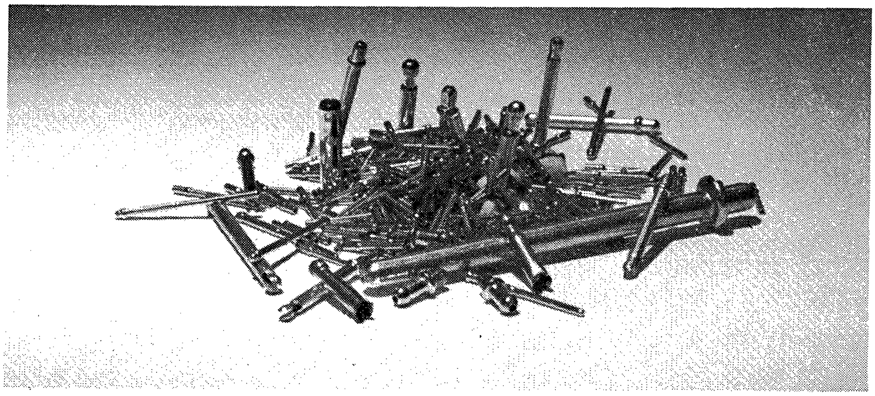
Bead Electronics

110 Mountain Grove St. • P.O. Box K • Bridgeport, CT 06605 • Tel. (203) 334-4124

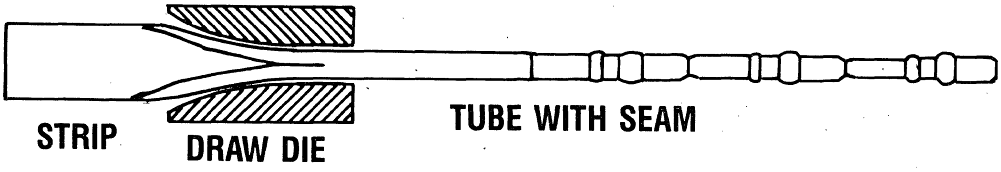
TUBULAR PINS



Bead's multi-swaged pins are widely used as electrical and electronic contacts and as hinge pins, fasteners and spacers. The method allows both round and non-round cross-sections of varying sizes to be incorporated into the same part, and is used to manufacture both hollow and solid pins. The process is fast, accurate and produces parts of high finish quality.

FEATURES

- Low cost
- High accuracy
- Shape flexibility
- High quality finish
- Variety of materials
- Mating parts
- Spherical or tapered ends



In Multi-Swaging, Metal is Moved, Not Removed.

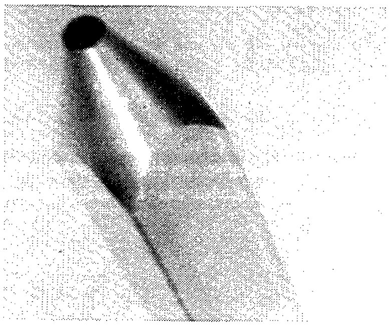
Pressures of a swaging die rearrange the molecular structure of the entering material into a shape different from that of the original.

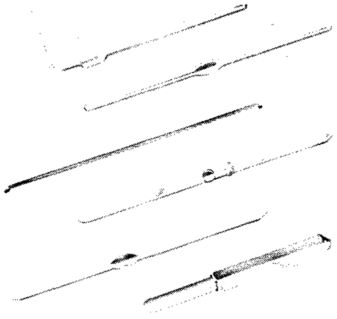
TUBE: Flat strip, slit to the width required by the largest diameter on the pin, is drawn through a round die, changing the strip to a tube having a longitudinal seam.

Bead Electronics

110 Mountain Grove St. • P.O. Box K • Bridgeport, CT 06605 • Tel. (203) 334-4124

SQUARE WIRE WRAP PINS





Bead square wire wrap pins are precisely made. They are straight to within .003″ up to 1.000″ in. length and .004″ over 1.000″ in length, and burr free, reducing production problems. They feature the finest conical ends in the industry for insertion into preplated holes.

Available Material

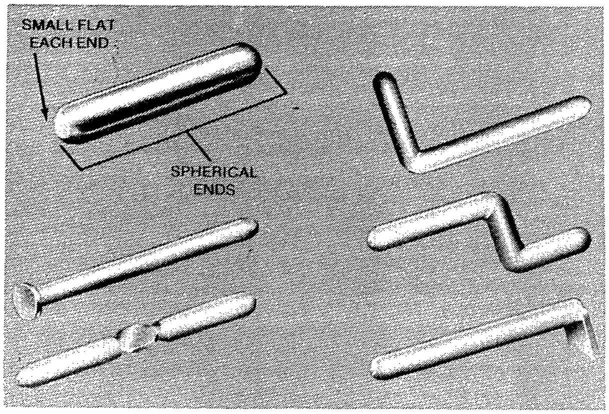
Base Metal

- Phosphor Bronze Alloy #510
- Brass Alloy #260
- Copper/Nickel/Tin Alloy #725
- Other Workable Metals Up to Full Hard Temper

Plating

- Bright Acid Tin
- Tin/Lead
- Gold
- Other

SOLID WIRE PINS



- Have rounded or conical ends
- Can be upset, flattened, headed
- Can have notches, barbs, ears, grooves
- Size range
  Diameter: .012″-.125″
  Length: Up to 2.0″

Bead Electronics

110 Mountain Grove St. • P.O. Box K • Bridgeport, CT 06605 • Tel. (203) 334-4124

Now you can take advantage of the increased efficiency and economic benefits of bandoliering without concern about such factors as incomplete plating or pin 'fallout.' Bead's new .100 center bandoliers have been uniquely designed to ensure 100 percent plating coverage and to keep the pins they carry in place before, during and after plating. They're also available with or without center fingers, allowing them to be specifically geared to whatever degree of pin push-out force your operation may entail.

FEATURES

- Reel mounted
- .100 centers
- .025 square wire-wrap pins
- Ultra-precision process eliminates burrs, stress and waste
- Ideal for insertion in pre-plated PCB holes
- Conical ends, with a smooth blend radius
- A variety of lengths available
- Variety of plating options available
- Standard and custom designs available
- Ideal for single or multiple-pin insertion applications

MARKEL CORPORATION

High Temperature Wire and Cable and Heat Shrinkable Tubing

SILICONE RUBBER WIRE AND CABLE

FLEXLEAD

Flexlead Silicone Rubber Leadwire and Cable are recommended for high temperature applications in motors, heaters, high voltage power supplies, switches, consumer appliances, medical equipment, nuclear plant wiring, and fire resistant control cables. Markel Flexlead Silicone Rubber Leadwire and Cable styles offer economy, reliability, compliance with UL, CSA, and Military requirements, ultra flexibility and a wide range of operating temperatures. ASK ABOUT OUR NEW 250°C UL APPROVED WIRE FOR GAS IGNITION SYSTEMS AND OTHER APPLICATIONS. **Write for a free copy of our brochure.**

FLUOROCARBON WIRE AND CABLE

FLEXLEAD

Flexlead Fluorocarbons (PFA, TFE, FEP, ETFE) are recommended for personal care and home appliances, aircraft, commercial and private communication systems, computers, business machines, electrical motors and traction equipment — Anywhere the ultimate in performance is required.

HYGRADE ELECTRICAL AND THERMAL INSULATING SLEEVINGS

HYGRADE

Constructed of carefully braided fiberglass yarn, impregnated and coated with specially formulated varnishes, vinyls, resins or silicone rubber compounds. A wide range of types, grades and sizes meet virtually every requirement for dielectric and mechanical strength under all kinds of operating conditions. Write for a free copy of our brochure.

FLEXITE

SHRINKDOWN

Flexite Shrinkdown Tubings are available in eleven different products to meet the requirements of a wide range of applications. These tubings recover 50% in diameter upon application of moderate heat and can be used at operating temperatures ranging from −67°C to 250°C. Flexite Shrinkdown Tubings have good dielectric properties and possess excellent resistance to oils and chemicals. **Write for a free copy of our brochure.**

PERMA POWER®

Sockets Plus™

Multiple Outlet Strips

A safe and convenient way to distribute power where it's needed

- Acts as power control center; most units have on/off switch and indicator light.
- Overload protected, built-in 15 amp circuit breaker shuts off power *here*—not down the line.
- Rated 1875 watts, 125 V., 15A.
- Double insulated #14/3 "SJT" line cord.
- U-ground outlets with electrically-wired ground; phosphor bronze, dual wiping contacts.
- Heavy duty, 22 gauge metal construction.
- Tough silver and black industrial finish, corrosion resistant zinc phosphate undercoat.

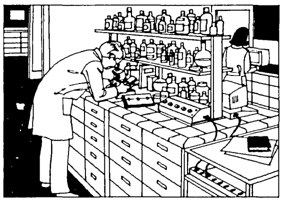
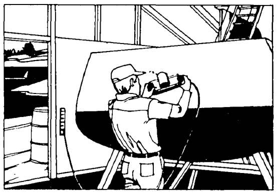
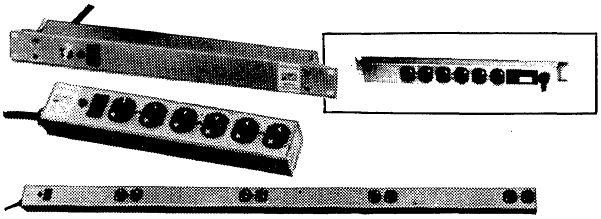
Multiple Outlet Strips

Sockets Plus™

INDUSTRIAL/SCIENTIFIC/MEDICAL "HIGH ABUSE" MODELS with Hospital Grade components







SPECIFICATIONS FOR PLUGS AND RECEPTACLES

Designated by a green dot—your assurance the components are U.L. Hospital Grade

- UL Hospital Grade Standards #498 and #544
- Federal Specification WC 596E (8200, 8210, 8300, 8310)
- NEMA Standard WD1
- NEMA 5-15R and 5-20R
- CSA Certified (8200-8210 series only)
- Corrosion-resistant per ASTM B-117-73

This industrial/scientific/medical series of Multiple Outlet Strips is specifically designed for high-abuse applications, for special safety requirements, or where equipment is exposed to fumes from corrosive chemicals or liquids.

When conditions require an outlet strip that "measures up," you need components that measure up. The plugs and receptacles in these strips are "Hospital Grade"—verified by Underwriters' Laboratories to have passed a series of torturous tests assuring the user of continuous, safe operation, even in the face of human negligence and corrosive environments.

Plugs and receptacles meet or exceed these "Hospital Grade" UL tests: ■ Abrupt removal of plug ■ Ground pin retention ■ Terminal strength ■ Assembly security ■ Face impact ■ Ground contact temperature ■ Ground contact resistance ■ Fault current test ■ Mold stress relief

All units have 6-foot double-insulated #14/3 "SJT" line cord. All are overload-protected by a built-in 15-amp circuit breaker that shuts off the power *here*, not down the line.

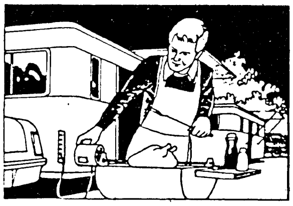
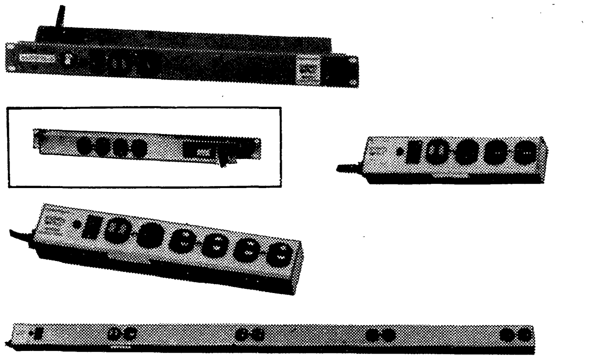
GROUND FAULT CIRCUIT INTERRUPTER MODELS





Moisture or dampness, improper or faulty wiring, or worn insulation can all contribute to a condition where the electric current in an appliance takes an unexpected path "to ground." If a person using such an appliance is in this current path, the resultant electric shock can cause injury or even death.

Perma Power GFCI Multiple Outlet Strip Models provide protection from these potentially hazardous ground fault currents. These models detect ground fault leakage current before it reaches hazardous levels, and instantly shut off all power to tools, appliances or equipment, thus guarding the user and providing assurance of maximum personal safety. When properly used and maintained, the GFCI Fault Finder device interrupts the circuit upon detecting any leakage greater than 0.006 amperes. Built-in "Test" and "Reset" buttons provide maximum user confidence.

The Perma Power GFCI outlet strips also have a built-in 15-amp circuit breaker to guard *the line* from overload conditions, but it's the GFCI device that guards individuals. Each strip has a double-insulated, #14/3 "SJT" line cord, and is rated at 1875 watts, 125 volts, 15 amps. To act as a power control center, each unit has an on/off switch and indicator light.

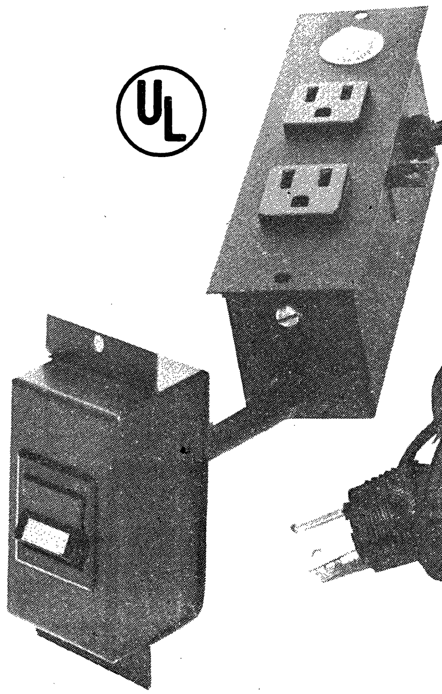
Free Customizing.

Let our Engineering and R&D Depts. design a product for your specific needs.



If you need 50 or more multiple outlet strips, SL WABER® has the expertise to help you develop a product with one or all of the following variations:

- Case size and shape (longer, shorter, deeper, wider, etc.)
- Relocation of components
- Increased or decreased number of outlets, switches, pilot lights, fuses, circuit breakers
- Special grade outlets, timers, motors, switches, pilot lights (e.g., hospital grade)
- More circuits or different capacity circuits
- 1 amp to 20 amps; 1 volt to 250 volts AC
- Length, type, and size of power supply cord
- Special configurations to meet local code requirements
- Over 480 UL Listed and 310 CSA Certified non-stocking designs are available to meet your specific need
- Other unusual characteristics

We are pleased that our customers keep coming back to SL WABER to use our experience and capability to create those special quality electrical interconnections to fit their most exacting applications.

Let us be of service to you. Call or write us today!
THERE IS NO OBLIGATION ON YOUR PART.

**HIGH PERFORMANCE CONTROL OF AIRBORNE AND STRUCTUREBORNE NOISE OVER WIDEST FREQUENCY RANGE.
HIGHEST RATIO OF PERFORMANCE TO THICKNESS OF CURRENTLY AVAILABLE MATERIALS.**

PROTECT

precision electronics from damage due to handling and shock.

STOP

sensitive, high speed parts safely . . . within controlled parameters.

QUIET

vibrating sheet metal parts or housings.

TYPICAL APPLICATIONS

DISK DRIVES

- Shock, Vibration Isolation Grommets
- Crash Stops
- Stepper Motor Inertial Dampers
- Grounding Strap Dampers

PRINTERS

- Print Head Bumper Stops
- Cabinet Damping/Sound Absorbing Composites
- Metal Parts Damping
- Striker Bar Damping

ELECTRONICS CABINETRY

- Shock, Vibration Isolation Mounts
- Damping/Sound Absorbing Composites

PRECISION EQUIPMENT

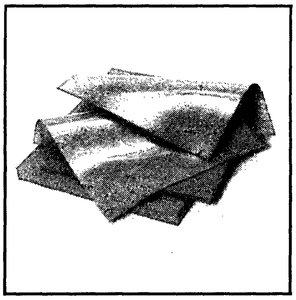
- Structural Damping
- Lab-Type Isolation Mounts

PRINTED CIRCUIT BOARD DAMPING

MOTOR, FAN

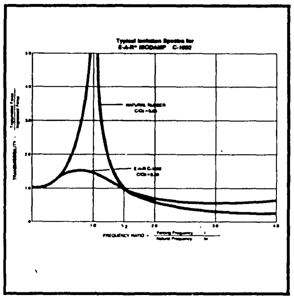
- Isolation Mounting Grommets
- Plenum Sound Absorbers

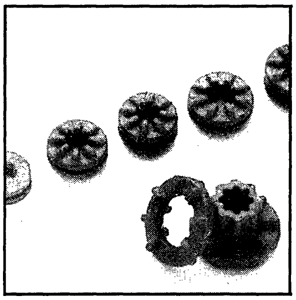
ACOUSTIC GASKETS AND SEALS



C-1002 "SOFT BLUE" ISOLATION

- Highly damped vibration isolation material
- Uniquely effective for shock or vibration over a broad frequency range
- Excellent wear and physical properties
- Available in sheets, die cut or custom injection molded parts
- Ideal for:
  - — Disk drive shock protection grommets
  - — Crash stops
  - — Stepper motor inertial dampers
  - — Isolation grommets for fractional HP motors and small fans
  - — Precision equipment mounts
  - — Acoustic gaskets and seals



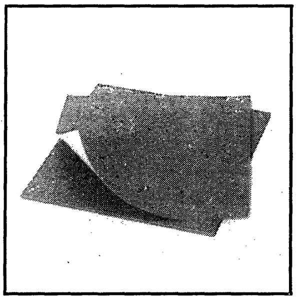


C-1002 GROMMETS

- Available in standard sizes for common metal thicknesses, bolt dimensions and loading parameters

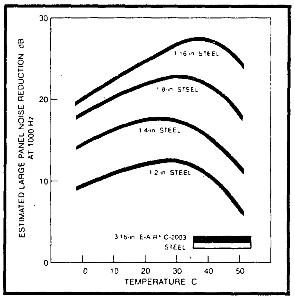
ISODAMP® GROMMETS

PRODUCT NUMBER	BOLT SIZE	PLATE THICKNESS	UNITS/BOX
Grommet 1	3/16″	1/16″	500
Grommet 2	3/16″	1/8″	500
Grommet 3	1/4″	1/16″	500
Grommet 4	1/4″	1/8″	500
Grommet 5	3/16″	1/16″	500
Star Grommet	1/4″	varies	500



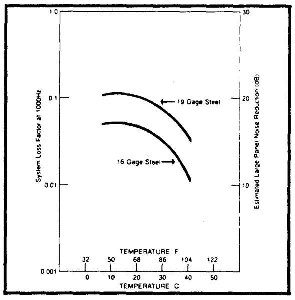
C-2003 "HARD BLUE" DAMPING

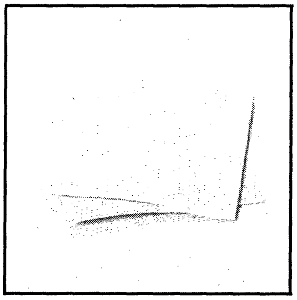
- Uniquely efficient damping material
- Easily applied with strong pressure sensitive adhesive backing
- Available in sheets or custom die-cut parts
- Ideal for:
  - — Disk drive grounding strap damping
  - — Metal parts damping
  - — Electronics cabinetry damping



C-2200 DAMPING MATERIAL

- Cost effective vibration damping for metal, plastic and structural foam
- Available in composite with plain and embossed sound absorbing foams for easy installation
- Available in sheets or die-cut parts; Also may be injection molded or vacuum formed for special applications
- Ideal for:
  - — Printer housings
  - — Electronics cabinetry
  - — Metal parts damping





C-3001, 3002 DAMPING FOAMS

- Energy absorbing, PVC alloy, closed cell foam
- Superior damping; light weight
- Available in sheets, rolls, or die-cut parts
- Ideal for:
  - — Printed circuit board damping
  - — Acoustic gaskets and seals
  - — Low load crash stops
  - — Protective packaging for shipment of delicate instruments

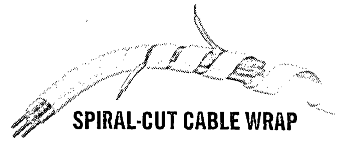
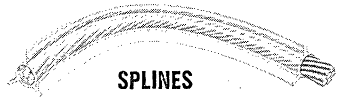
SOLVES TRICKY HIGH PERFORMANCE PROBLEMS

Withstands heat extremes to 500°F. Absolutely uniform. Superior lubricity. Zero water absorption. Inert to virtually all corrosives. High dielectric strength. Flexing unlimited. Shock, high pressure, and abrasion resistant. Non-toxic. Non-contaminating. Easily sterilized. Compatible with human tissues and fluids.



SPIRAL-CUT CABLE WRAP



SPLINES

SUB-LITE-WALL™ — World's smallest tubing! Walls as thin as 0.0015″ in I.D.s of 0.022″+. Also walls of 0.007″ with I.D.s less than 0.002″. (Note: The average human hair is 0.003″.)

HEAT-SHRINK — Provided in expanded state with shrink ratios up to 4 to 1. A brief application of heat produces a skin tight jacket that overpowers hell, high water, and the acid test.

DUAL-SHRINK — Outer tubing of TFE and an inner tubing of FEP. Outer tubing shrinks for tight fit when heat is applied. FEP melts and flows to form a fit so tight it can withstand severe stresses and resists moisture, acids, etc.

HEAVY CONSTRUCTION — For extra strength and durability. Ideal for automotive, chemical, electrical, and mechanical applications.

SPAGHETTI — Unmatched concentricity and tolerances. Wide range of AWG sizes, fractional inch and industrial grades.

SNAPTUBE® — For the restoration and reutilization of conductors with damaged cables. Snaps into place quickly. Available in long lengths and sizes to accommodate wire bundles.

FEP TUBING — Chemically inert, excellent dielectric properties. Continuous use at 400°F. Non-aging, anti-stick. Great tensile strength.

PFA TUBING — Tough, flexible. Continuous use near 500°F. Features clarity, chemical inertness, excellent flex-life, and chemical flow. Exceptional stress/crack resistance and great dielectric properties.

"C" SHAPE GUIDE RAIL COVERS — Slick surface increases conveyor-line speed. Doubles system life for beer, soda and food packagers and manufacturers of cans and containers.

APPLICATIONS

WATER & AIR SAMPLING • CHROMATOGRAPHY
• MEDICAL • ROUND BEADING • MINIATURE ROD
• SPECIALTY WIRES • CABLES • COAXIAL CORES • ETCHING
• UNIQUE WIRE INSULATIONS

Write for data sheets on any of the above items.

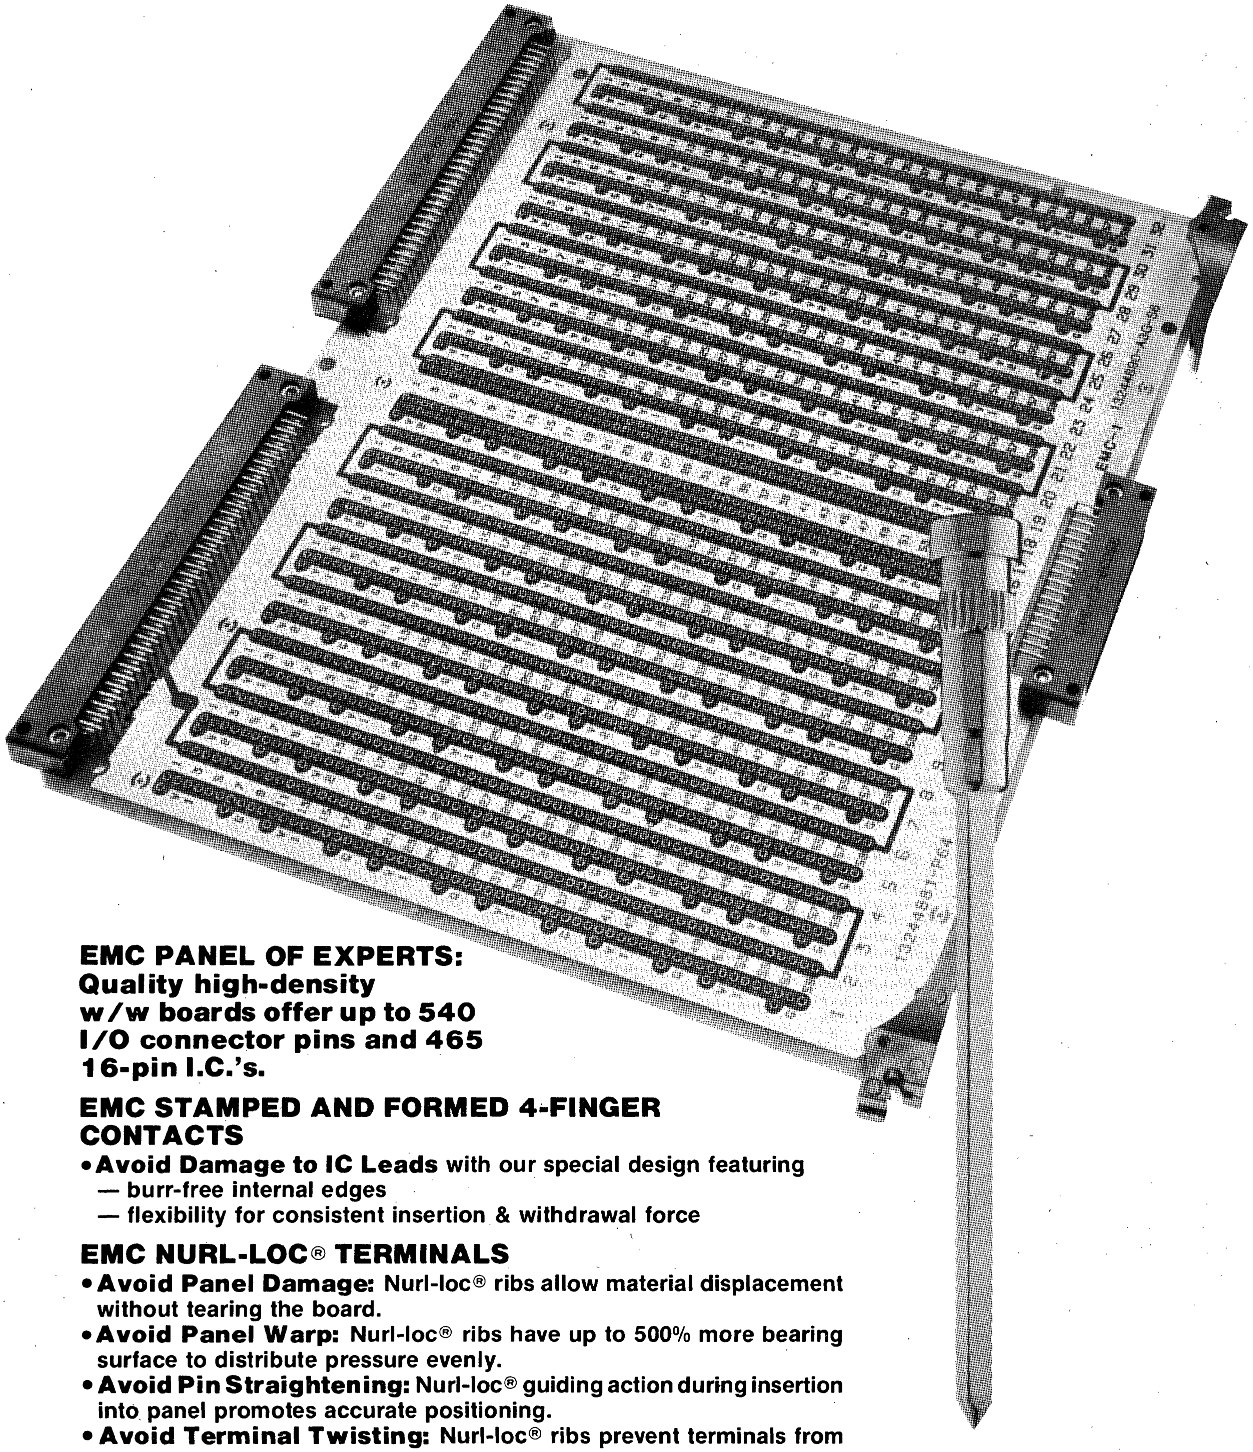
A PANEL OF EXPERTS

EMC NOW OFFERS COMPATIBLE WIRE WRAPPABLE BOARDS FEATURING 108-PIN CONNECTOR!



EMC PANEL OF EXPERTS:
Quality high-density w/w boards offer up to 540 I/O connector pins and 465 16-pin I.C.'s.

EMC STAMPED AND FORMED 4-FINGER CONTACTS

- **Avoid Damage to IC Leads** with our special design featuring
  - — burr-free internal edges
  - — flexibility for consistent insertion & withdrawal force

EMC NURL-LOC® TERMINALS

- **Avoid Panel Damage:** Nurl-loc® ribs allow material displacement without tearing the board.
- **Avoid Panel Warp:** Nurl-loc® ribs have up to 500% more bearing surface to distribute pressure evenly.
- **Avoid Pin Straightening:** Nurl-loc® guiding action during insertion into panel promotes accurate positioning.
- **Avoid Terminal Twisting:** Nurl-loc® ribs prevent terminals from spinning during wire-wrapping.

EMC®

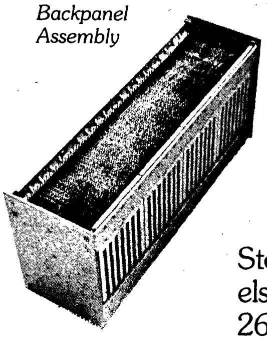
WIRE WRAPPING AND ASSEMBLY SERVICES

THE PIONEER IN WIRE WRAPPING

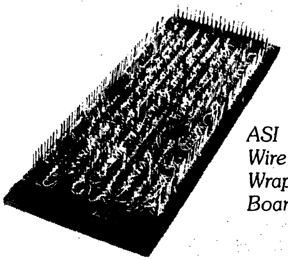
All you have to provide us with is a board, schematic diagram, and chip layout. We will take care of the rest. If you prefer, we can even supply you with the boards. We have a large supply of Augat or Mupac compatible, and ASI custom boards in stock.

3 TO 5 DAYS TURNAROUND TIME



Backpanel Assembly

With 21 machine wire wrapping stations we can handle single prototypes to large production runs.



ASI Wire Wrappable Boards

Additionally

Stock and custom manufactured wire wrappable panels. Pre-cut and stripped Kynar wire in 30 AWG and 26 AWG.

ASSEMBLY SERVICES

Large production and equipment facilities versatile enough to be able to handle small, medium and large production orders.

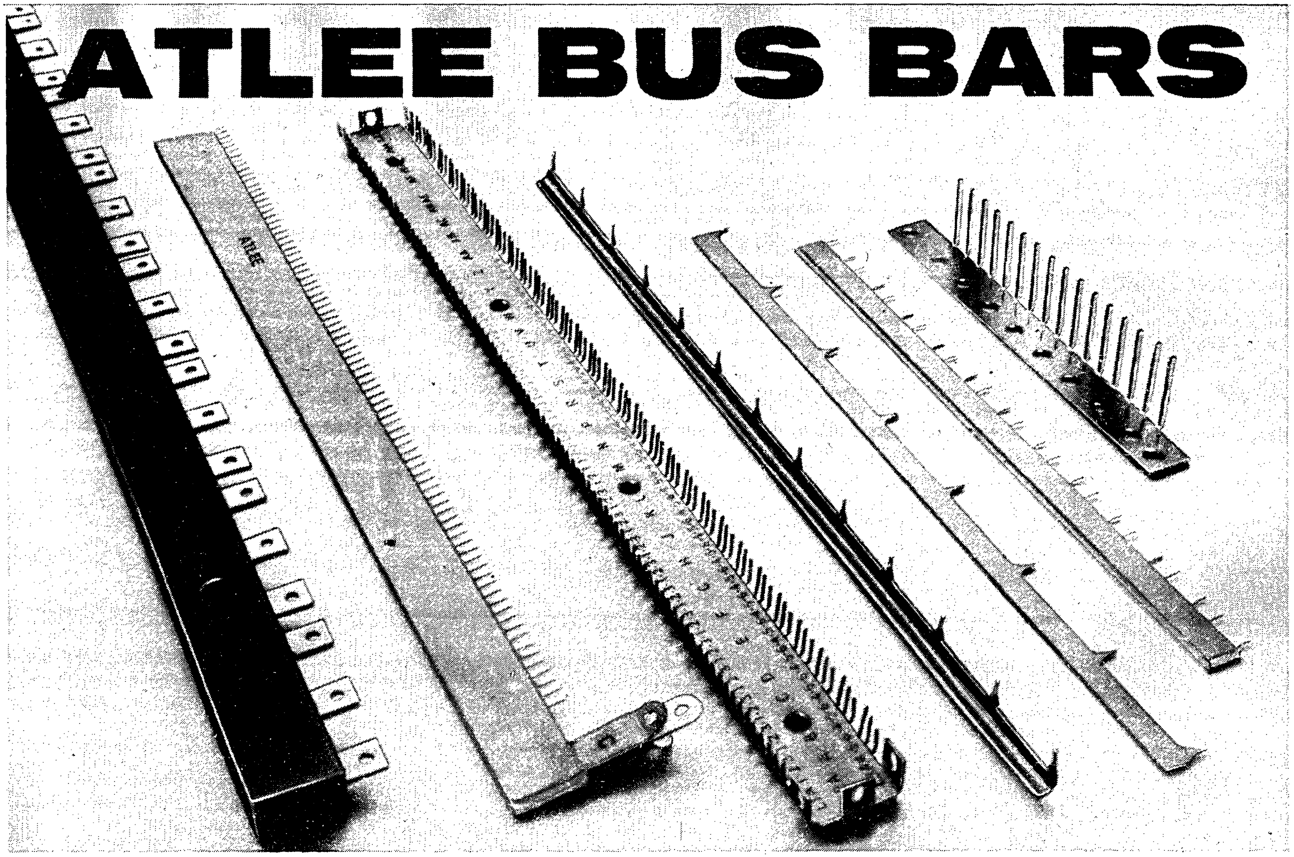
ATLEE BUS BARS



Atlee is a full line manufacturer of bus bars, serving the computer industry, avionics, military contractors and various high tech manufacturers. We have available design and engineering services as well as prototype department. In addition, Atlee has sales representatives nationwide to service our customers. Please contact Atlee to service your bus bar requirements.

TO SPECIFY AN ATLEE BUS BAR

Please contact the factory for a bus bar catalog and any questions you may have.

TO SPECIFY A CUSTOM BUS BAR

If your requirements do not permit the use of an Atlee Standard Bus Bar, send a drawing print or even a rough sketch of the Bus Bar that would meet your specifications and let Atlee's Sales Engineering Department work out the details and give you a quotation. Atlee will manufacture any type bus bar to your specifications. In general the information required includes:

1. Application and quantity
2. Space available
3. Current paths required
4. Type of terminations
5. Number and location of terminations
6. Current requirements
7. Voltage drop requirements
8. Tab to tab spacing on each conductor
9. Type of mounting
10. Capacitance desired
11. Dielectric strength
12. Environmental requirements
13. Type finish on conductors
14. Marking
15. Quantity

DESIGNER'S NOTES

Atlee laminated bus bars consist of flat conductor layers stacked on one another and separated by appropriate dielectrics. Typically such an assembly is laminated and edge-sealed or encapsulated so that the final product becomes a rigid unit with high reliability and stable electrical and mechanical properties. These properties provide uniform capacity, low impedance, and high-speed transmissions of signal and current. Atlee bus bars are an economical alternative to multi-layer printed circuit boards and wire harnesses. They offer:

- Lowered production costs, because assembly is simple and fast.
- Reduced volume which permits higher density packaging than possible with wire harnesses.
- Reduced noise with ideally distributed capacitance and isolation of conductors.
- High current-carrying capacity.
- Low impedance and inductance.

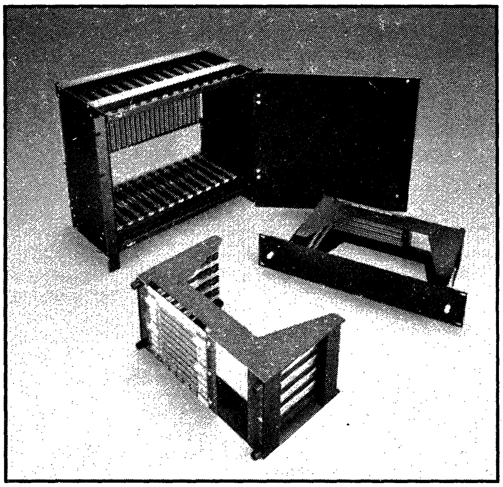
Multibus Card Cages



Multibus card cages/backplanes are available in a wide variety of card spacing, card slots, and P2 backplane options. The parallel priority option is field installable in all chassis with 8 or more slots.

Connector spacing	Range of slots	Options	P2 backplane	
			with power	w/o power
.6"	4-26	Parallel Priority, −5V Reg.	yes	yes
.75"	5-21	Parallel Priority, −5V Reg.	yes	yes

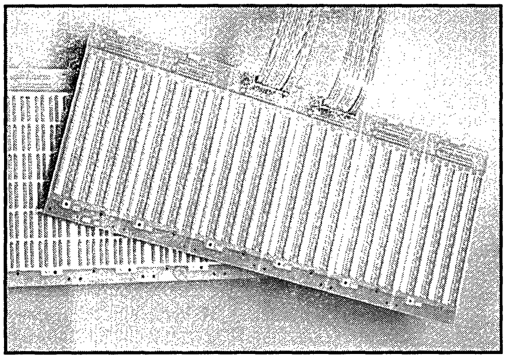
Modular Series

The Modular Series panels fit into a 16.35" x 7.30" frame that is held in a rack-mountable card cage. Up to six panels (each 2.675" x 6.875") can be placed in the frame. 7.475 panels with widths on 2.675" increments are also available. Each panel may have a unique hole pattern (TTL, ECL, etc.) and a unique I/O pattern.



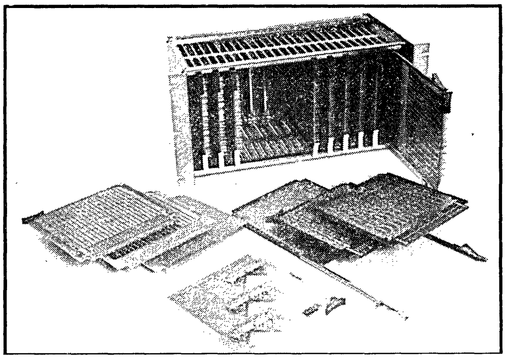
IC Patterns

- TTL Universal
- 16 and 20 pin committed TTL
- Schottky
- ECL (10K, 100K, TTL/ECL translators)

I/O Styles

- .3" DIP Header
- 26 pin Ribbon Cable Header
- 28 pin High Density Plug (Augat 9P28 Series)
- 40 pin Ribbon Cable Header

R Series



IC Patterns

- TTL Universal
- 16 and 20 pin committed TTL
- TTL Hi-Pak
- Schottky
- ECL (10K, translators)

Accessory Cards

- Extender Cards (TTL and ECL)
- TO-3 and DIP
- Blank Cards
- Pre-Drilled only

Card Cages

- 1.2" centers with 3, 6, 9 or 13 slots
- TTL or ECL (controlled impedance) backplanes

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

EEM FILE SYSTEM,

DATACON

EVERYTHING YOU NEED FOR WIRE WRAPPING SERVICE.

☐ You provide the panel and wiring information, and dataCon can do everything else. If you prefer, dataCon can even furnish the panel of your choice.

☐ Schematic to machine-wired panel in one week.

☐ Prototype or production capacity.

☐ Automatic and semi-automatic wrapping.

☐ Wide-ranging assembly capabilities.

☐ Computerized testing for wired panels and PCB's.

☐ Round-the-clock operations for on-time deliveries.

Wire wrapping is our only business. And we've become so good at it we're the largest contract wire wrapping company in the world. We've shown many of the biggest companies in electronics that we can do their wire wrapping better and at less cost than their own departments. Let us show you.

All Metric Series boards contain high density 96 pin inverse DIN connectors.

24 Extender Cards

Ruggedly framed and supported extender card with 96 pin Reverse DIN connectors, 5-layers, 96 patched test points for each board size and logic option.

12 Backplanes

For .800″ or 1.200″ card centers. 96 pin Reverse DIN connectors, press-fit V&G wrap-pins. Massive power and ground planes. Wire wrap interconnections. TTL, Schottky, ECL and High-Speed Universal.

16 Card Racks

6 free standing and 6 Retma mount vertical racks for each size board .800″ and 1.200″ card spacing. 2 horizontal (free standing or Retma mount) racks for Model 32 boards, and mixer racks for different board sizes.

Three Pin Technologies

Stitch-Wire

MIL-approved wiring technique providing optimum performance for ECL and fast Schottky devices. Fast, easy and low cost changeability with the highest reliability of difussion bonding.

Wire-Wrap

Tin or gold plated 1 to 3 level wrap pins. Suitable for TTL and some Schottky applications.

Insulation Displacement. Fast, convenient breadboarding for a test circuit. Available only in TTL boards in the Metric Series. Easy conversion to Stitch-Wire.

Design, Wiring Services and Equipment.

Logic conversion, Stitch-wiring, Insulation Displacement wiring. Numerically controlled and manually operated Stitch-Wire machine. Custom Board Design.

All ITI Metric Series Boards are available in four configurations:

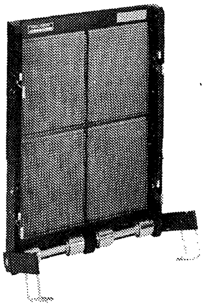
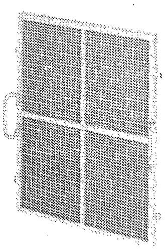
MAC PANEL

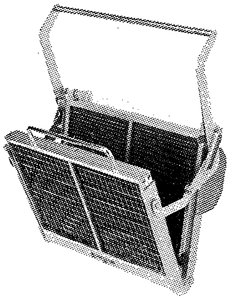
1958-1986 Our 28th Year
PLUGBOARD PROGRAMMING SYSTEMS

SERIES 157 PLUGBOARD SYSTEMS

Reliable economical program control with Spring-Lock, Lever-Arm or Cam-Arm mechanism. Removable plugboard, patched with Series 157 Plugwires.







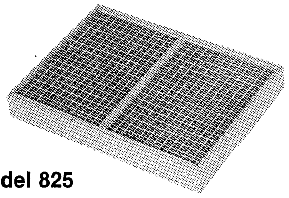
Model 927
(3264 Positions)

Model 921
(1600 Positions)

Series 157 Plugwire Tip

SERIES 157 FIXED SYSTEMS

Used where program change requirements do not dictate the use of removable plugboards. Patched with Series 157 Plugwires.



Model 825
(1632 Positions)

IN-STOCK CONNECTORS & TOOLS

We maintain shelf stock on connectors, and crimping, insertion and extracting hand tools. Used for interconnecting the plugboard system to external equipment.

SERIES 157

REMOVABLE PLUGBOARD SYSTEMS

(Accepts Series 157 Plugwire Tips)

CONTACT POSITIONS	MODEL NUMBER	HOLE PATTERN HOR. - VERT.	LOCKING MECHANISM	RECEIVER DIMENSIONS W	H	D

7200	989	80 x 90	CAM-ARM	16.9	20.5	4.0

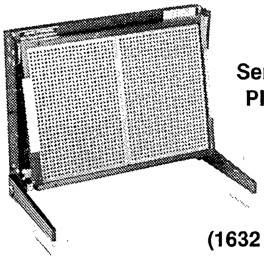
Series 96 Systems: Feature twice the contact density of our series 140 and 157 systems. Also available in Hybrid version having combination signal, power and coax capabilities.

MAC PANEL CO. • 216 Pine St., P. O. Box 5027 • High Point, NC 27262, U.S.A • Phone: (919) 884-8111 TWX: 510-926-1542

1958-1986 Our 28th Year
PLUGBOARD PROGRAMMING SYSTEMS

MAC PANEL

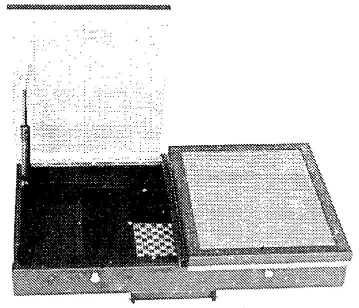
SERIES 140 PLUGBOARD SYSTEMS
Extremely strong and compact systems with removable plugboards. Features cam-closing mechanism. Choice of taper pin or wrap terminations for connecting to external equipment. A complete line of SERIES 140 plugwires is offered.



Model 935
(1632 Positions)

Series 140 Plugwire Tip

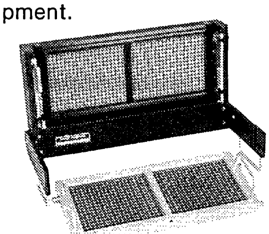
VACUUM FIXTURE KITS
Single and Duel Fixture Kits for use with HEWLETT PACKARD (3060/61/62 & 65) and DIGALOG SYSTEMS printed circuit board testers.



Duel Fixture Kit

SERIES 96 DOUBLE DENSITY SYSTEM
Introduced in 1983, offers twice the contacts per total space required when compared with SERIES 157 & 140 Removable Plugboard SYSTEMS. A choice of Modular Plug or wrap termination for connecting to external equipment.

Series 96 Plugwire Tip



Model 983
(2400 Positions)

APPLICATIONS OF REMOVABLE PLUGBOARD SYSTEMS

MAC PANEL Plugboard Programming Systems are used whenever there is a need for frequent or fast changes in the functions performed by electrical equipment and circuits or in the interconnection of two or more machines and/or circuits. Removable Plugboards are prewired with plugwire assemblies to provide a given pattern of interconnection. Changes can be made either by changing the program wired in the removable Plugboard or by simply replacing the Plugboard in the Receiver with another pre-programmed Plugboard in a matter of seconds. **MAC PANEL** Plugboard Programming Systems are used as large connectors with up to 7200 contact positions on standard models. Thousands of **MAC PANEL** systems have been installed in the United States and in over forty foreign countries since 1958.

GENERAL PRODUCT DESCRIPTION

Each system consists of a Receiver and one or more removable Plugboards. The Receiver is the frame and the engaging mechanism that accepts the removable Plugboard. Depending on the system there are from one to six molded black phenolic or blue diallyl phthalate panels in the Receiver and Plugboard frames. A molded panel will contain up to 1280 holes or contact positions. These panels are silk screened with a grid pattern that provides a unique alphanumeric address for each contact position in the system. Special customized printing in any number of colors can be provided on either the Plugboard or Receiver.

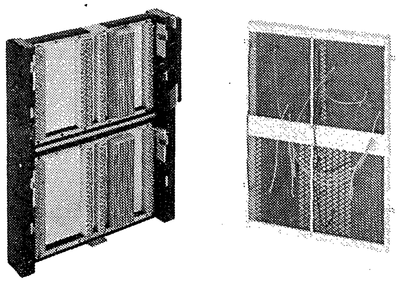
A contact spring is factory installed in each Receiver contact position. The front portion of these nickel or gold plated contact springs mates with nickel or gold plated plugwire tips inserted in the appropriate contact position of the Plugboard when the Plugboard is inserted in the Receiver. All Receivers are equipped with a mechanical interlock that assures proper mating of contact springs and plugwire tips. Each contact position can also be directly connected to the equipment from the rear of the Receiver by soldering, insertion of taper pins, or wire-wrapping. The desired method of connection must be determined prior to ordering so that the appropriate type of contact springs will be provided in the Receiver.

SERIES 96
The more sophisticated mechanism of the SERIES 96 allows for precise alignment of a more dense array of mating contacts. The system consists of up to 6 precisely drilled sections. The removable plugboard has alphanumeric silk screening of each of the nylatron sections. Systems are in multiples of 1200 contact points ranging from 1200 to 7200 points. The receiver sections made of G-10, hold 1200 female sockets with gold plated BE-CU contacts. Termination for wiring to external equipment can be done through wire-wrap, ribbon cable or using single conductor wire. Each cable assembly may contain up to 60 conductors for mass termination through a 2 x 30 modular connector.

The SERIES 96 is also designed for hybrid applications incorporating Signal, Power and Coax capabilities in one compact mechanism.

MAC PANEL maintains shelf stock on over 500 types of plugwire assemblies. These include single conductor and multi-conductor unshielded and shielded plugwires as well as crimpable and wire-wrappable plugwire tips.

MAC PANEL customer service personnel and design engineers invite your inquiries. We can promptly and economically design, build, and install a special custom system or plugwire if our standard product will not meet your requirements.



MODULAR AUTOMATIC TEST EQUIPMENT (MATE) INTERFACE SYSTEMS:

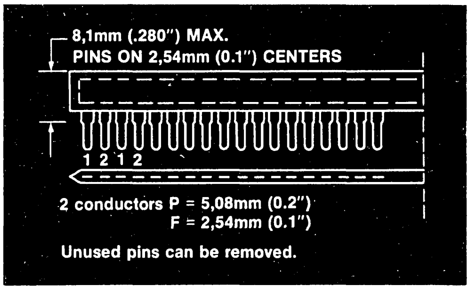
Mini/Bus® PRINTED CIRCUIT BOARD BUS BARS

M833 2-LAYER VERTICALLY MOUNTED



Unused pins can be removed.

PITCH (P)

Pin-to-pin spacing on the same conductor layer.

OFFSET (F)

Dimension from the first pin of layer 1 to the first pin of layer 2.

SPACES (X)

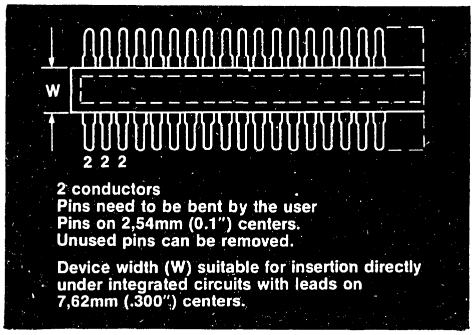
Number of spaces on the same conductor layer.

Mini/Bus Standard Parts — M833

Part Number L.P.F.	X	L
M833 20.2.1	20	107,95mm (4.25")
M833 25.2.1	25	133,35mm (5.25")
M833 30.2.1	30	158,75mm (6.25")
M833 35.2.1	35	184,15mm (7.25")
M833 40.2.1	40	209,55mm (8.25")
M833 50.2.1	50	260,35mm (10.25")
M833 60.2.1	60	311,15mm (12.25")

WORKING VOLTAGE: Maximum working voltage is 50 VDC
TEMPERATURE RANGE: Mini/bus bus bars are suitable for the commercial temperature operating range of -10°C to +85°C
STORAGE TEMPERATURE: -55°C to +105°C

M832 2-LAYER HORIZONTALLY MOUNTED



2 conductors
Pins need to be bent by the user
Pins on 2,54mm (0.1") centers.
Unused pins can be removed.

Device width (W) suitable for insertion directly under integrated circuits with leads on 7,62mm (.300") centers.

P = 2,54mm (0.1")
F = 0.0mm (0.0")

PITCH (P)

Pin-to-pin spacing on the same conductor layer.

OFFSET (F)

Dimension from the first pin of layer 1 to the first pin of layer 2.

SPACES (X)

Number of spaces on the same conductor layer.

Mini/Bus Standard Parts — M833

Part Number X.P.F.	X	L
M832 40.1.0	40	105,4mm (4.15")
M832 50.1.0	50	130,3mm (5.15")
M832 60.1.0	60	156,2mm (6.15")
M832 80.1.0	80	207mm (8.15")
M832 100.1.0	100	257,8mm (10.15")

WORKING VOLTAGE: Maximum working voltage is 50 VDC

TEMPERATURE RANGE: Mini/bus bus bars are suitable for the commercial temperature operating range of -10°C to +85°C

STORAGE TEMPERATURE: -55°C to +105°C

Quik/Bus® CONDUCTORS FOR MULTILAYER BUS BARS

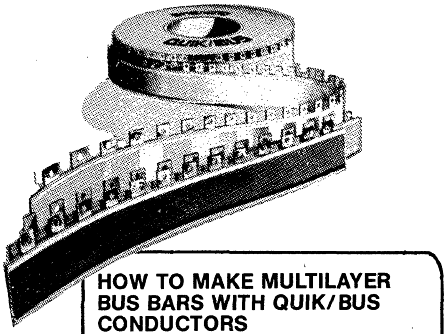
1.00 TYP.
.19
.25
.19 Dia. thru
.50
.020 thk. Alloy 110 Copper, HH. Tin Precoated .00001 thk.



SPECIFICATIONS/AVAILABILITY

Quik/Bus conductors are available in reels of 50 conductor feet, standard. Conductor is .020" thick copper, HH, tin precoated. Current carrying capacity is 74 AMPS @ 30°C temperature rise.

QUIK/BUS APPLICATIONS

Quik/Bus was developed by Rogers to provide a fast, economical way to make multi-layer bus bars with no tooling cost, no waiting for custom parts. This do-it-yourself Quik / Bus approach is especially useful for prototypes and low volume uses. It retains all the advantages of custom fabricated laminar power distribution bus bars.

FOR OTHER STYLES OF QUIK/BUS CONDUCTORS CONTACT THE FACTORY.

HOW TO MAKE MULTILAYER BUS BARS WITH QUIK/BUS CONDUCTORS

1. Unroll conductors from reel.
2. Cut to length.
3. Remove unneeded input and output tabs where necessary.
4. For large end tabs peel back insulation and cut. Punch holes as required.
5. Form tabs as required.
6. Align conductors and form bus bar body as required.
7. Bundle securely with cable ties.
8. Check finished part for shorts.

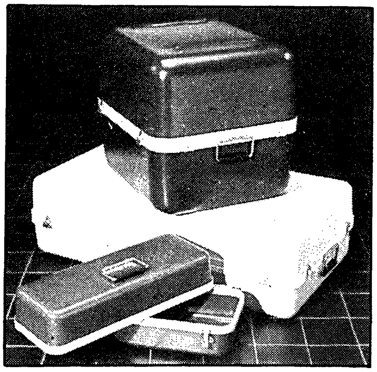
Quality Protection for Advanced Technology

If it measures, computes, records or controls...Skydyne makes it portable.

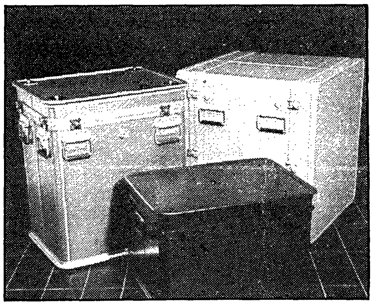
Standard Fiberglass Cases—Excellent commercial/shipping containers. Can be modified to meet mil-specs or other specific requirements. 34 sizes.

Standard Mounting Flange Cases—Adapt display or test equipment to field use with a standard, built-in mounting flange. 38 sizes.

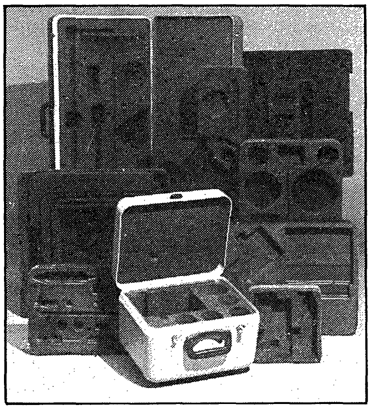
Standard Econoglass Cases—An economical fiberglass carrying case. Has standard mounting clips available for easy panel installation. 28 sizes.



Standard ABS Cases—Excellent commercial/shipping containers. Combine high strength with light weight. Easily modified. 33 sizes.



Aluminum Sandwich Cases—Skydyne can make any size case using a unique aluminum sandwich construction without expensive tooling costs.



Foam Interiors—For additional equipment protection, Skydyne can supply virtually any type of foam insert to meet your requirements.

Since 1938, Skydyne has met the growing need for durable, lightweight protective enclosures. Keeping pace with today's advancing technologies, Skydyne products are found in a wide variety of applications including Fiberoptics, Geophysical Instruments, Portable Computers, Pollution Control, Meteorological Instruments, Aircraft Maintenance, Aerospace and Military Electronics.

Customers in these and many other fields have come to call on Skydyne when quality packaging is required for portable equipment. Commercial or military; prototype or production...Skydyne's engineering staff will work with you from preliminary design through delivery. They have the ability and know-how to solve the most difficult of packaging problems. Call or write for more information, today.

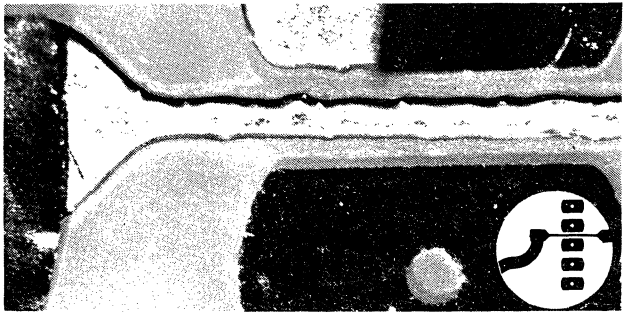
DATAK - PRINTED CIRCUIT KITS

PHOTO ETCH™ Printed Circuit Kit

Photograph original 1:1 master art or PC patterns directly from a magazine page using remarkable POS-NEG™ system (patented). No darkroom or camera needed. Set has all materials to make original artwork masters, film negatives and positives. Use the 5"x 6" print frame, copper clad boards, negative photoresist and chemicals to sensitize, expose, develop and etch printed circuit boards. 12 page instruction book covers the theory and practical instructions. Photoflood bulb must be purchased separately at any camera store.

ER-4 PHOTO ETCH PRINTED CIRCUIT KIT $34.95



Dry Transfer DIRECT ETCH™ Resist in Action

OTHER PRINTED CIRCUIT PRODUCTS

TINNIT™ Electroless Bright Tin Plate

TINNIT is supplied as a dry powder. Dissolved in a pint of water, it will plate about 700 sq. ins. of clean copper with a bright tin plating. No electricity is needed. Use to enhance solderability and conductivity on edge card connector patterns.

ER-18 TINNIT™ BRIGHT TIN PLATE $3.50

Etch Resist Pen

Felt pen has lacquer ink that is impervious to PC etchants.

ER-15 ETCH RESIST PEN $1.80

Dry Concentrated Etchant

¼ pound anhydrous ferric chloride in vapor tight pack makes 1 pint etchant, enough for 200 sq. in. of copper board. Cost less than liquids.

ER-3 DRY CONCENTRATED ETCHANT $2.50

Power Etch Pump Kit

Circulates etchant with air to speed etch rate. Kit has pump, coupling hose, perforated distributor tube.

ER-12 POWER ETCH PUMP $7.25

POS-NEG™ Photocopy Film and Accessories

Makes negatives or positives from opaque or translucent original art in one step without a camera. No darkroom needed but use subdued light. Use with yellow filter (ER—17) and EAL photoflood lamp. Read ER-16 Photo Etch Manual before opening this film.

ER-5 SIX SHEETS 5" x 6" POS—NEG FILM $6.50
ER-9 TWO SHEETS 8" x 11" POS-NEG FILM 6.50
ER-16 PHOTO ETCH MANUAL 1.50
ER-17 8½" x 11½" YELLOW FILTER 2.00

Contact Printing Frame

A solidly made plated steel and glass exposure frame. Spring back adjusts for film or circuit board exposure. Kit includes ER-17 yellow filter and ER-16 Photo Etch Manual. 9" x 12" size.

ER-10 CONTACT PRINTING FRAME, 9" x 12" $12.95

Film Process Chemicals

Three packets make 1 pint lithographic film developer and 1 pint acid fixer. Handles 15 sheets 5" x 6" Pos-Neg film.

ER-6 FILM PROCESS CHEMICALS $3.25

Negative Photo Resist Liquid and Developer

Spray on PC board and expose through negative. Unexposed areas are dissolved by developer. Exposed areas harden and are etch resistant. Four ounce bottle with pump spray coats over 1700 sq. in. Develop ONLY with ER-8 or Kodak KPR developer.

ER-71 PHOTO RESIST LIQUID, 4 ounce $6.95
ER-8 NEGATIVE RESIST DEVELOPER, 16 ounce $4.20

DIRECT ETCH™ Printed Circuit Kit

This one step kit uses a unique dry transfer resist that makes razor-sharp patterns on copper clad boards. Lay out circuits right on the copper with these etch resistant dry transfers. Connect with dry transfer lines or the special tape, then etch in ferric chloride or in any commercial PC etchant. Results are equal to or better than commercial boards. Kit includes PC boards, dry transfer resist patterns, resist tapes, ferric chloride etchant, etch tray and instructions.

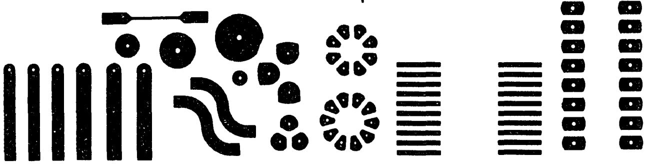
ER-1 DIRECT ETCH PRINTED CIRCUIT KIT $9.50

DRY TRANSFER ETCH RESIST PATTERNS

DATAK prints a broad range of dry transfer resist patterns with an ink that is impervious to all commercial etchants. This ink is identical to that used in printing the JotDraft and Microseries range of donuts and connector patterns. See our full line catalog for additional etch resist patterns.

17.6X BLOWUP shows .015" line between .100" spaced DIP pads. Resist pattern is from DATAK ER-2 set. Circuit board is 2 ounce copper etched in a still bath of ferric chloride for 30 minutes at 125°F. Measured undercut is less than .0015".

Resist Pattern and Tape Assortment



Our best selling set includes 8 sheets of donuts, .125" and .156" connector fingers, transistors, round IC's, DIPs of any size, dry transfer traces and 2 rolls of resist tape. This set is in the ER-1 and ER-4 kits.

ER-2 DRY TRANSFER ETCH RESIST ASSORTMENT . . $5.75

Resist Donut Pad Assortment

Set contains 4 sheets of donuts 1/16" through ¼" dia. with .025" center holes.

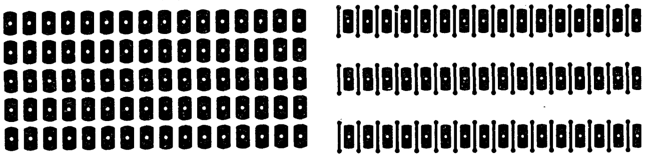
ER-13 DONUT PAD ASSORTMENT $2.95

Resist DIP Pattern Assortment

Set has 4 sheets of continuous .100" x .300" DIP patterns and .050" spaced flatpack fingers. Rub down the length you need. See also JD-171, JD-174.

ER-14 DIP PATTERN ASSORTMENT $2.95

Continuous Resist DIP Pads



From JD-171 **From JD-174**

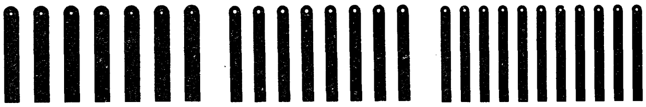
JD-171 set contains 24 sheets of continuous .125"D x .070" cut pads spaced on .100" x .150" centers. Transfer pads on any multiple of .150" or .100". Do any size DIP pattern accurately and fast.

JD-171 RESIST DIP PADS $11.95

JD-174 has 24 sheets of continuous .125"D x .053" cut pads spaced on .100" x .150" centers with a trace between adjacent pads. Pads transfer alone or with traces on any multiple of .100" or .150". Do a large ROM or a ½ DIP with equal ease.

JD-174 RESIST DIP PADS WITH TRACES $11.95

Edge Card Connector Fingers



.156 Spacing **.125 Spacing** **.100 Spacing**

Sets contain 24 strips of spaced connector fingers. Each strip of fingers is 8" long. Butt strips for any connector length.

JD—122R ASST. CONNECTOR FINGERS: .156" & .125" $11.95
JD-168 CONNECTOR FINGERS: .100" $11.95

See Sections 2400 and 6000 for DATAK Panel Marking Sets and Wire Markers

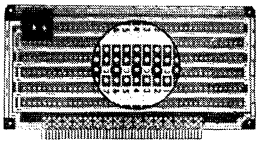
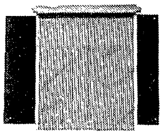
S100 AND IEEE 696 SYSTEM PACKAGING



8804



3690-12

Plugbords for interface, memory expansion, breadbording. Nickel/gold plated contacts, 50 each side on 0.125" centers. 0.042" holes on 0.10" grid for DIP sockets, push-in terminals and socket pins. Fire retardant epoxy glass composite material.

8804: "ANY DIP" -- full power and ground planes back-to-back on opposite board sides with offset pads. Two regulator positions provided, one heat sink furnished. Holds 70 16-pin DIPs.

8800V: Power distributed to each DIP location by heavy copper tinned power and ground planes on opposite board sides for low impedance. Prewired regulator circuit and two heat sink provisions. Holds 36 16-pin DIPs.

8801: Individual tinned square pads surround most holes. Heavy tinned power and ground buses are provided and prewired regulator position. Pads for mounting I/O connectors. Holds 82 14-pin DIPs.

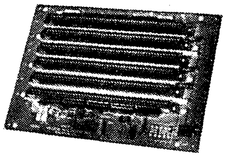
8801-1: No etched circuitry except plug contacts. Holds 121 14-pin DIPs.

3690-12: Provides 7.5" long extension to facilitate testing. Mounted connector.

Connectors with 50/50 gold/nickel plated contacts on .125" centers:

R681 Dip Solder Tail. **R681-1** Wrap Post Tail. **R681-2** for mother board use.

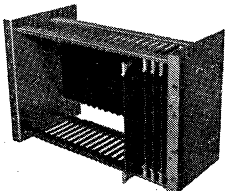
MOTHER BOARDS



8803-6-1A

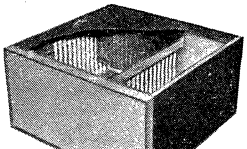
Hi speed - up to 10MHz, shielded, two-sided, plated thru holes, FR4 epoxy glass, .000050" gold plated connector contacts, liberal decoupling capacitors, "reset" switch wiring pads, fully assembled.

8803-6-1A 6-position **8803-18-1A** 18-position.



CCK100
Rack Mounting Cage

Especially designed to accommodate S100, Exorciser and Micromodule Plugbords. 19" w. x 12.2" h. x 8.9" d. Furnished with 21 pairs of guides. Adjustable rear struts mount mother boards or connectors.

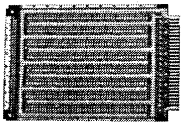


VP2
Assembled Case

Sturdy blue vinyl finished aluminum, fully assembled, with card guides, mounting for mother board or connectors. Power supply chassis plate, and I/O rear connector panel with 10 cutouts for DB25S connectors included.

STD BUS

Plugboards for interface, memory expansion, experimentation. Flame retardant epoxy glass composite .062" × 4.5" × 6.5" with 2 oz. tinned copper buses and pads. 28/56 nickel/gold plated contacts on .125" centers. Power and ground bus terminations per STD Bus .042" dia. holes on 0.1" grid. I/O connector pads.

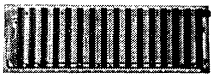


4610

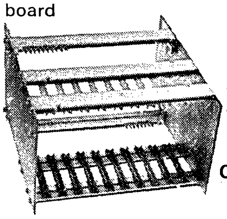
4610: for soldering or wire wrapping
4610-2: for wire wrapping
4610-1: no etched circuitry except for plug contacts
3690-12: extender board has nickel/gold contacts to mounted receptacle.

STD BUS MOTHER BOARDS - RACKS

Hi speed—up to 10MHz, shielded, 2-sided, plated thru holes, FR4 epoxy glass, .000050" gold plated connector contacts, liberal decoupling capacitors, • **4610-8-1** 8-position board • **4610-16-1** 16-position board



4610-16-1A

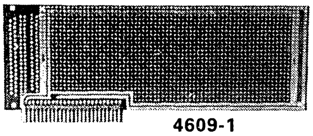


CCK19S

CCK19S "drop in" card rack, all aluminum 5¼" h. × 8¼" × 8½" d. 20 nylon card guides supplied for card mounting on .250" increments, rear cross members for mother board or connector mounting.

CCK19SMB8: CCK19S rack with 4610-8-1 motherboard.

APPLE II, IIe



4609-1

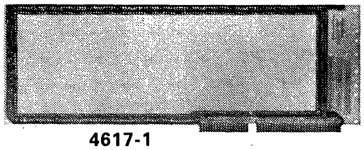
4609 Plugbord: Hi capacity, mounts 22 16-pin DIPs. .1" grid of .042" holes. 7.7" × 3.06". Two sets of gold plated I/O card edge contacts wrap wire or solder. Tinned 2 oz. copper, power and ground buses.

4609-1: +5V & ground—no pads. Mounts 46 16-pin DIPs. One set of edge contacts; also dual purpose pattern on board edge for up to 40-pin .1 × .1 header, or 37-pin "D" sub connector.

IBM AT, PC PROTOTYPING PLUGBOARDS

COMMON FEATURES • Gold plated edge contacts on 0.1" centers • Power & ground buses terminated to connectors. • Pads on board & bracket accepts DB9-, 15, 25 or 37-pin I/O connector • Accepts Vector's press-in terminals for wiring or soldering. **FEATURES UNIQUE TO IBM AT ONLY** • Plugs into any IBM AT slot with dual connectors. • Pads for mounting a dual row 0.1" spaced header.

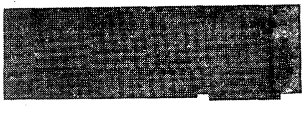
IBM AT PLUGBOARDS



4617-1

4617: 3-hole solder pads & buses
4617-1: Peripheral buses
4617-2: Voltages Planes
4617-3: Pad-Per-Hole
3690-26: Extender board

IBM PC PLUGBOARDS

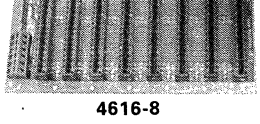


4613

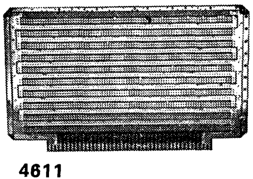
4613: 3-hole pad and bus board
4613-1: Bare board with Peripheral buses
4613-2: Wire wrapping bus board
4613-3: Pad-Per-Hole, Plated through
3690-22: Extender board

44-LINE BUS SYSTEM MOTHERBOARD

4616-8: • RCA Cosmac compatible. • Connectors on 0.75" centers with 22/44 contacts spaced 0.156" centers. • 6.75" × 4.33" × .062" • 6-pin quick disconnect connector installed for external power. • Pads provided for decoupling capacitors between each connector.



4616-8

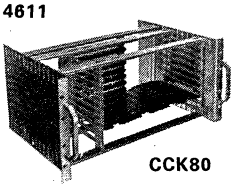


4611

MOTOROLA EXORCISOR MICROMODULE

4611 Plugbord: 3-hole pads + 2 buses per Motorola standard, 43/86 nickel/gold contacts on .156" centers. Epoxy glass composite with .042" dia. holes on 0.1" grid for solder or wrap pins.

4611-1: Same as 4611 except no etched circuitry except plug contacts.



CCK80

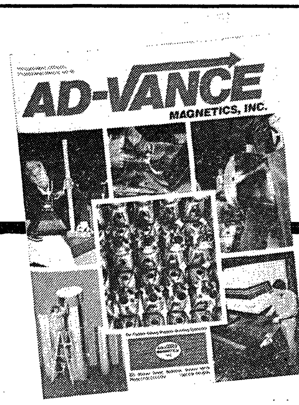
HORIZONTAL CARD CAGE

CCK80: Horizontal card cage for S100 Bus—Multibus—Motorola Exorcisor, Micromodule

10 adjustable card positions. Fully assembled.

Many other models available -- contact your local distributor or factory. For wiring terminals and tools, see Sec. 1700, P. C•1102.

VECTOR ELECTRONIC COMPANY, 12460 Gladstone Avenue, P.O. Box 4336, Sylmar, CA 91342-0336 Phone (818) 365-9661



YOUR MAGNETIC SHIELDING PROBLEMS END HERE!

Request AD-VANCE Magnetics' new 84-Page Procurement Catalog/Engineering Manual; offers magnetic shielding users the major technical guideline data needed to design or choose the optimum magnetic shielding solution for a given application.

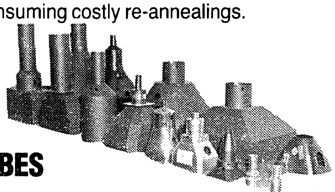
CUSTOM FABRICATED SHIELDS FOR COMPONENTS AND SYSTEMS

Any Specified Configuration or Shielding Requirement

From the simplest component to the most complex system, Ad-Vance Magnetics can design and fabricate an AD-MU shield incorporating your magnetic shielding performance requirements.

These include magnetic isolation chambers, shields for low field research, magnetic shielding components required in systems (such as CRT's), transformers, motors, tachometers, reed relays and computers, dewars for cryogenic research, various test chambers, video cameras, scan converter tubes, photomultiplier tubes, storage tubes, aircraft weather radar display tubes, etc.

Lasting shielding protection is provided because AD-MU alloys do not saturate when properly used, will not suffer excessive permeability loss from shock, and display minimum retentivity. Accordingly, there is no need for repeated time consuming costly re-annealings.



AD-MU CUSTOM FABRICATED SHIELDS FOR CATHODE RAY TUBES

Enhance CRT performance by eliminating effects of external magnetic fields on the electron beam.

Ad-Vance already owns tooling for many types of magnetic shields used during the past quarter century, making tooling savings possible. Or, our Engineering Dept. will gladly help design and produce the optimum shield for your application.

AD-MU TAPE DATA PROTECTORS ASSURE FIDELITY OF VALUABLE TAPES

1 Assure fidelity of vital recorded information by keeping data on magnetic tapes free from distortions caused by unforeseen external magnetic fields.
2 Minimize erasure accidents during safekeeping or transport.
3 Discourage and deter the covert saboteur or vandal.
4 Excellent insurance against possible expensive, or irreplaceable losses.

Made of AD-MU-00 .050" thick. Finished in durable textured enamel.

INEXPENSIVE INSURANCE IN THESE UNCERTAIN TIMES

Proven AD-MU Tape Data Protectors and Cassette Tape Data Protectors provide inexpensive insurance against such hidden hazards.

Satisfied customers include all branches of the armed forces, NASA, and numerous private firms as well as other governmental organizations.

There is not a single reported instance in which tapes enjoying such secure protection have ever been affected by stray magnetic fields. The investments in such tapes have remained uniformly safe from harm.

"WHY TAKE MY MAGNETIC SHIELDING PROBLEMS TO AD-VANCE MAGNETICS?"

Over 90% past and present magnetic shield designs have been created and fabricated by engineers and production personnel with Ad-Vance. With such a record of experience, it seems likely that Ad-Vance people are the logical ones to solve your particular problem.

"What facilities does Ad-Vance have?"

Two modern, fully equipped plants in Rochester, Indiana, are across the street from each other. They contain up-to-date equipment for:

All types of metal forming
heliarc and spot welding
complete in-house tool room
deep drawing
CNC equipment
processing control of heat
treating and finishing
in-house quality control

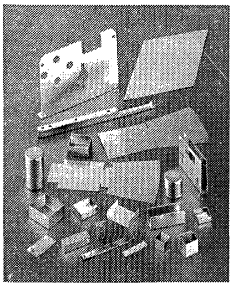
"What's Ad-Vance's industry and market position?"

Ad-Vance is the industry's largest, oldest and most experienced firm exclusively manufacturing magnetic shielding. Products from its factory are used off-planet in spacecraft and satellites as well as world-wide in exacting industrial, military, laboratory and consumer applications.

AD-MU SHEET STOCK—DELIVERY FROM STOCK

- For your in-house designing and manufacturing convenience.
- Easy to work, bend, stamp, draw, finish, etc. on ordinary sheet metal working equipment. SHIELDS MUST BE HEAT TREATED before end use or further finishing by plating, painting, etc.

JUST CUT AD-MU FOILS TO THE EXACT SHAPE YOU NEED



These Time-Saving High and Low Permeability Foils offer convenient, economical magnetic shielding. In many applications, their use can eliminate the costs of designing and manufacturing pre-fabricated shields. Foil shielding is also useful in hard-to-get-at-places. In addition, it permits more compact assemblies, accomplished by placing magnetically reacting components closer together with no performance degradation.

The foils exhibit useful ductility, so are readily hand trimmed to your desired outline on an ordinary cutting board, or with shears. They are then easily hand formed around the structure or component to be shielded. Simple adhesive tape can be used to hold them in place. They have already been properly heat treated so are ready for immediate use.

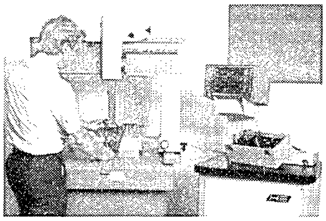
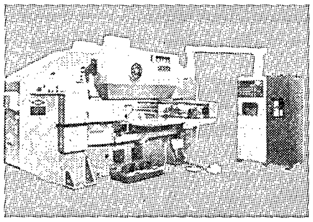
The Problem Solving Magnetic Shielding Specialists—4 Decades of Magnetic Shielding Leadership amuneal

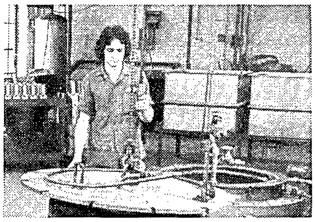
the ONLY magnetic shielding manufacturer with all this IN-HOUSE capability!



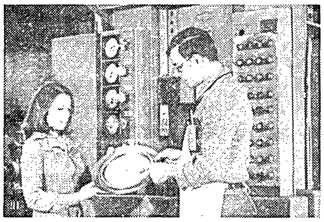
STATISTICAL QUALITY CONTROL... fully documented system. Conforms to MIL-45208A and ASTM 698-74. Computerized XYZ CMM checks the dimensional accuracy.



CNC CONTROL CAPABILITY... superior precision and cost efficiency for multiple hole punching. Up to ±.005" accuracy and ±.001" repeatability.



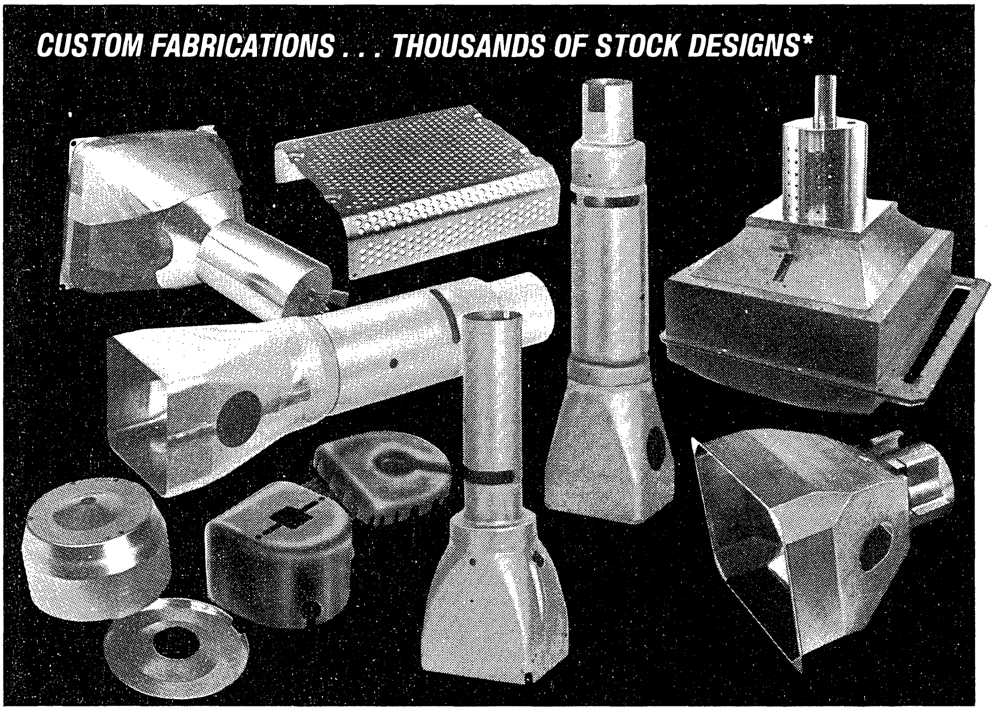
HYDROGEN ANNEALING . . . each shield is annealed after fabrication in one of our six cam-controlled furnaces with strip-chart readout.



HYDROFORMING... the truest, deep-drawing technique available for highly accurate contouring of shields.
and . . . a complete TOOL & DIE Department.

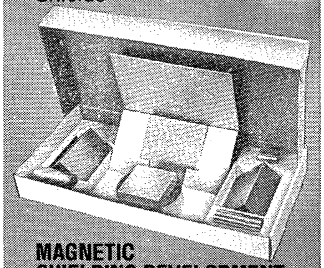
no other shielding manufacturer can match our ability to deliver ON TIME... ON SPEC... ON BUDGET!

That's because no other manufacturer can match our in-house capability or design experience. Give us a drawing of the device you want shielded, and we'll select the proper alloy and suggest the most cost-effective way to design, fabricate, anneal, and test your shields. Try us with one shield—or a production run of a million—and you'll see why we've become the largest magnetic shielding manufacturer in America.



*CUSTOM FABRICATIONS... THOUSANDS OF STOCK DESIGNS**

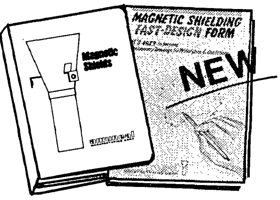
*CRT Shields • Photomultiplier Shields • Transformer Shields • Computer Shields • Power Supply Shields • Chassis Shields • Motor Shields • Printer Head Shields • Special Purpose Shields



MAGNETIC SHIELDING DEVELOPMENT AND EXPERIMENTAL KIT

This kit provides design engineers with various sizes and shapes of amumetal shielding alloy. All nine components are fully hydrogen-annealed to provide optimum EMI shielding properties.

Ask for our FREE 64-page catalog and NEW FAST-DESIGN FORM that makes it easy to prepare drawings for prototypes or quotations.



Immediate Delivery from Stock on Foil and Sheet.
Amumetal (80% nickel): Amunickel (49% nickel)
Material Thicknesses . . . .014", .020", .025", .030", .040", .050", .060"

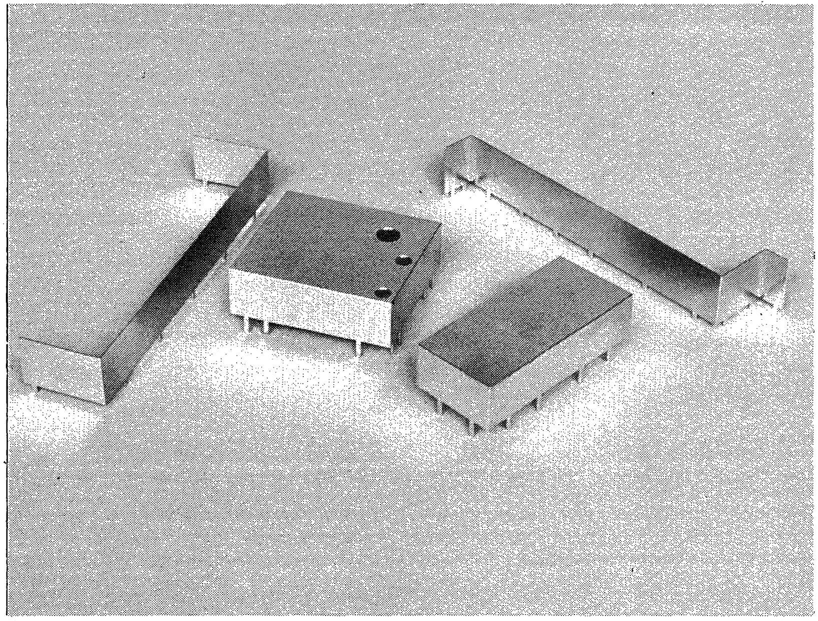
RFI/EMI SHIELDING

Atlee manufactures custom RFI/EMI shielding made from beryllium copper, brass or nickel silver. These shields are used to isolate the source of RFI on the circuit board.



Atlee finger contacts and gasketing made from beryllium copper are used for grounding and shielding applications. Ideal for electronic enclosures and chassis.

Magnetic Shield Manufacturing

REPRODUCIBLE QUALITY — ON COMMAND!

COMPETITIVE EDGE

Eagle Magnetic's willingness to invest in expandable state-of-the-art automated manufacturing and control equipment reflects our desire to continue our competitive edge, serving our customers, well into the future.

CAD/CAE to CAM

Productivity begins with our sophisticated Computer process control center. Here advanced high-level programming, link design/engineering specifications to optimum machine operation. Precise monitoring compounds value added by increased machine uptime, reduced waste, and repeatable accuracy in reproducing your exact design specifications —now—or a year from now.

MORE THAN AUTOMATION

CNC/DNC and NC machines provide the precision and long term repeatability required to produce the consistent, high quality—value added products you deserve.

In addition to automated equipment, our up-rated semi-automatic and operator directed machines provide important alternatives for selecting the most cost-effective process methods.

CRAFTSMENSHIP

Talented craftsmen combine knowledge and experience, with proven CAM and up-to-the-minute fabrication techniques.

Pride of workmanship and a creative environment, result in quick, practical solutions to production problems.

You will benefit from our improved process consistency and greater productivity.

BENCHMARK QUALITY

Eagle Magnetic Benchmark Quality is our manufacturing standard. We believe value added quality is a **design-in** feature not an inspect-in incident. Skillful management of committed individuals operating state-of-the-art CAD/CAE/CAM equipment increase **design-in** value added quality with each process.

Quality begins when design specifications are CAD/CAE enhanced and continue through master programming, down-loading, and station process control.

Careful handling and shipping insures that you receive a high quality value added product.

RESPONSIVE

If you expect high quality, value added shield products, manufactured to your exacting specifications, by the latest automated technology, then you should contact Eagle Magnetic Co.—the technology leader in the material selection and production of shields to solve EMI problems.

Now! EMC testing services from Instrument Specialties— the company that knows shielding inside and out!

If you're involved with keeping RFI/EMI in or out, you already know about Instrument Specialties. You've probably used our beryllium copper shielding strips...received our engineering help ...even used our new line of ESD devices.

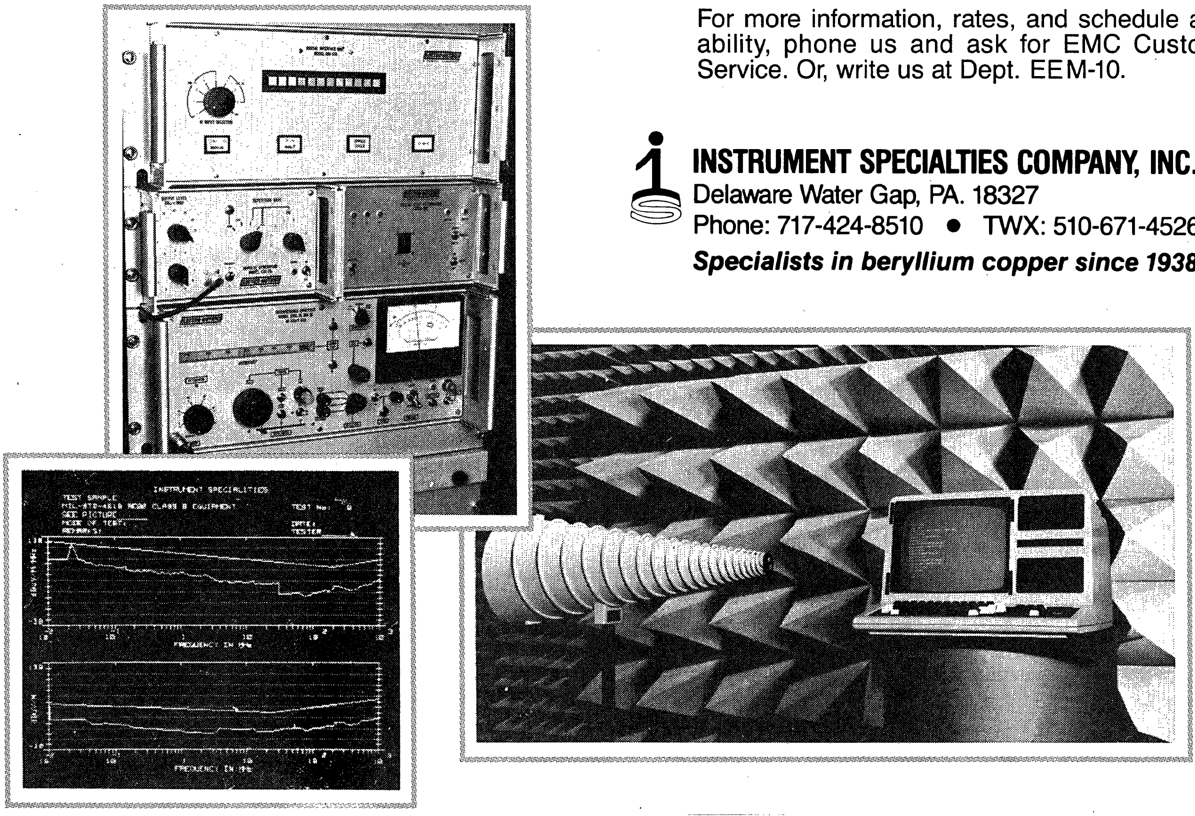
And *now*—the superb EMC testing facilities we use to assure performance of our products is *available to you for the first time.* You now can access the sophisticated equipment you don't have—but *must* have—to secure the test results you need!

State-of-the-art computer-controlled emission and susceptibility measurements from 10 kHz to 1 GHz...RF gasket evaluation...FCC/VDE/CISPR and MIL-STD-461A/B Tests...networks for power line conducted RF emission tests...semi-anechoic shielded enclosure...confirming open field test site...computer-produced hard copy readout of test results—all are yours at Instrument Specialties.

Following testing, you'll leave our facility with the precise documentation you need. In the event you need help to meet required interference specifications, we can supply that as well. All this, from one qualified source!

For more information, rates, and schedule availability, phone us and ask for EMC Customer Service. Or, write us at Dept. EEM-10.

INSTRUMENT SPECIALTIES COMPANY, INC.
Delaware Water Gap, PA. 18327
Phone: 717-424-8510 • TWX: 510-671-4526
Specialists in beryllium copper since 1938



Now! A low-compression electronic gasket that also provides environmental protection!

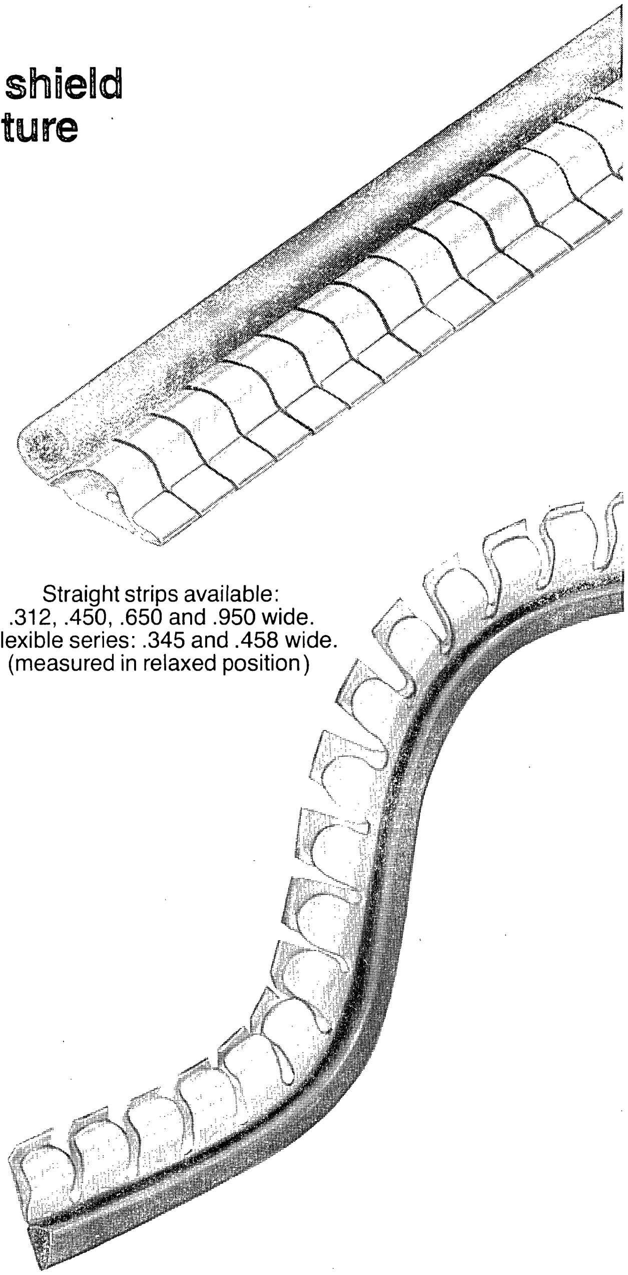
New Instrument Specialties strips shield RFI/EMI; control noise, dust, moisture and chemical contaminants!

These new Sticky Fingers® electronic gaskets combine beryllium copper finger strips with a neoprene rubber seal. Providing shielding characteristics comparable to other Instrument Specialties shielding strips, they also serve as an environmental seal. Thus, they are especially suited to applications where protection against noise, dust, moisture, and chemical contaminants is required as well as electronic interference protection.

The unique design of these sealing strips permits the use of extremely low compression forces, compared to conventional elastomers, to make contact with the surface of both the environmental and electromagnetic shield.

Complete continuity of the neoprene gasket is assured by using a straight joint coupler, or mitering or butting at corners. No special tools or soldering required. And as with all Instrument Specialties Sticky Fingers strips, installation is fast and secure with the strips' self-adhesive backing. The flexible series provide the same advantages, for use where a continuous shield must conform to irregular shapes and turn tight-radius corners in either direction.

Catalog E^3-58 provides complete information, including exact specifications, dimensional drawings, etc., on these and other Instrument Specialties shielding strips. Use this publication's Reader Service Card, or write to us directly at Dept. EEM-19.



Straight strips available:
.312, .450, .650 and .950 wide.
Flexible series: .345 and .458 wide.
(measured in relaxed position)

More EMI/RFI Protection

MORE SHIELDING SYSTEM OPTIONS

We offer a complete line of modular enclosures, cabinets, and custom rooms.

Shielding materials, in solid-sheet or screen, cover nearly every shielding requirement.

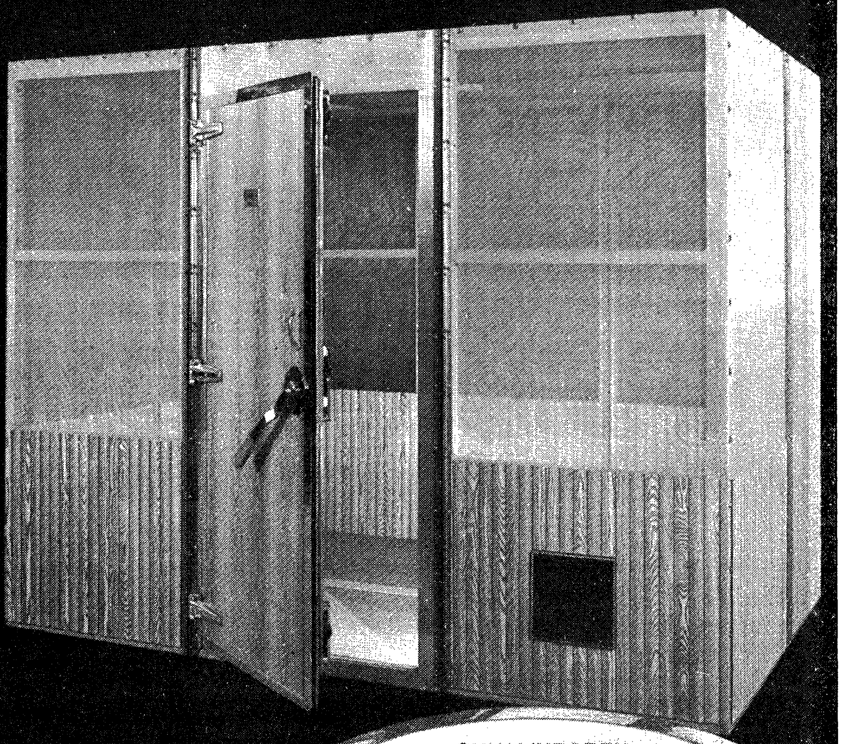
Our application engineers will help you design enclosures that meet your requirements for windows, filters for power and signal lines, wave guide feedthrus and lights.

Other options include RF connectors, fiber-optics, special access panels, automatic doors, emergency exits, permanent ramps, and flush floors with low-rise thresholds.

EASY MODULAR ASSEMBLY

Our patented resilient clamping system permits easy assembly. Enclosures can be modified and relocated again and again without specially trained personnel.

Call us for more information and applications assistance. 312-628-9100



ONLY LINDGREN MODULAR SHIELDING SYSTEMS are assembled, tested, & guaranteed to meet specifications before they're shipped.

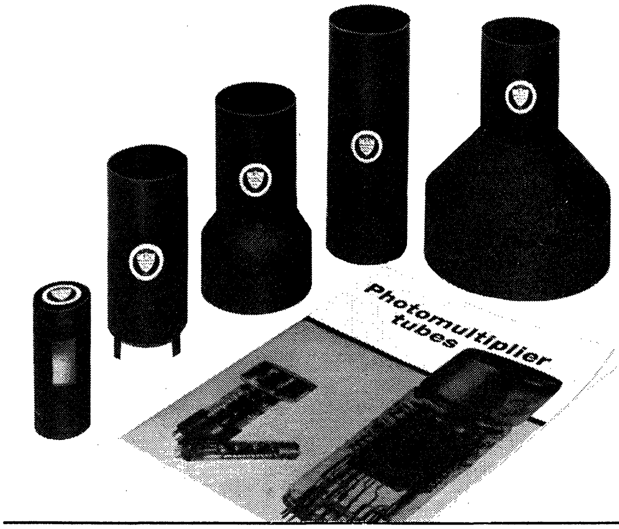
magnetic shields for photomultiplier tubes

Magnetic shields shipped from stock for 90% of photomultiplier tubes.



MAGNETIC SHIELD DIVISION

Perfection Mica Company
750 North Thomas Drive
Bensenville, Illinois 60106 U.S.A.
(312) 766-7800 TWX (910) 256-4815

CO-NETIC magnetic shields improve the amplification characteristics of photomultiplier tubes by providing significant attenuation of magnetic fields. Effective shielding is ensured over a wide range of field intensities. When grounded, the shields provide protection against electrostatic interference.

CO-NETIC shields are highly resistant to shock and vibration. The shields have minimal retentivity and do not require periodic re-annealing.

Request catalog PM-4, which lists recommended shields for over 650 photomultiplier tubes.

NOTES:
Unless otherwise noted:
Dimensions — All ID
Material — .040″ Thick Co-Netic AA
Finish — Black baked enamel; texture outside, flat inside.
a — Upper end closed.
b — Dimensions D & E are measured from the outside of the outer shell. Dimension G is the maximum OD. Material — Three layers, separable; outer .049 Netic S3-6, two inner .031 Co-Netic AA Finish — Netic S3-6, black oxide; Co-Netic AA, none.
c — Has three tabs, spaced 120° apart, to grip the metal collar of the PM tube.
d — Material — .031″ Co-Netic AA.

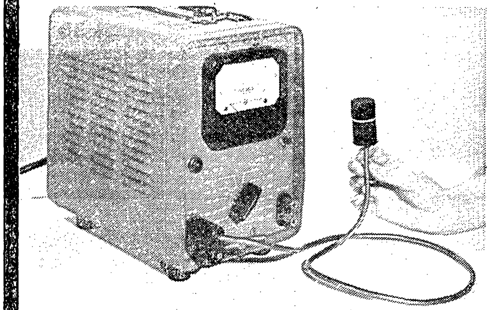
complete magnetic shielding accessories & mica

MAGNETIC SHIELD DIVISION

Perfection Mica Company
750 North Thomas Drive
Bensenville, Illinois 60106 U.S.A.
(312) 766-7800 TWX (910) 256-4815

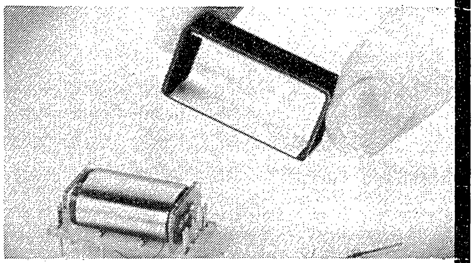


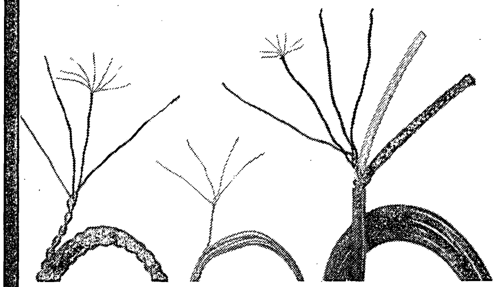
LAB KITS & PROBES

Lab Kit contains assorted CO-NETIC and NETIC shielding materials, double-faced pressure sensitive tape for shield construction and 20 millivolts/gauss A.C. magnetic pickup probe .... all for $99.50
Probe only, 20 mV/gauss, axial $49.50
Probe only, 60 mV/gauss, axial (shown) or transverse $79.50
Request Lab Kit catalog LK-2, Probe catalog EP-3.

COMPONENT SHIELDS

Full time engineering staff available for consultation on shielding problems. Magnetic Shield Division is also the preferred source for custom shields to your specifications. Extensive standard and special tooling provide fast shipment. Call for design assistance or send print for prompt quotation.



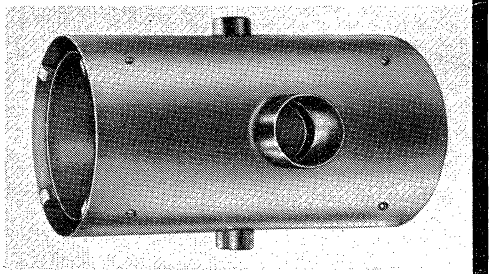


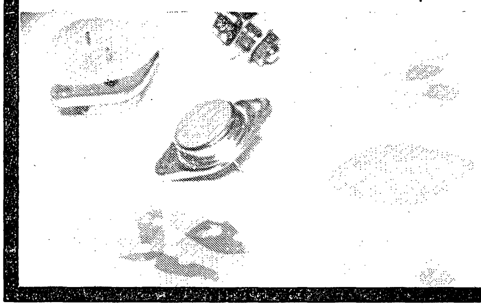
INTER-8 WEAVE CABLE

Our patented, woven configuration of four signal leads provides superior attenuation over a twisted pair. Attenuation improvement of unshielded INTER-8 WEAVE cable is −20 db for radiation and −12 db for pickup. An additional −20 db is obtained with our braided CO-NETIC jacket. Available in #24 AWG, unshielded or shielded. Request catalog WC-1

ZERO GAUSS CHAMBERS

Zero gauss chambers provide the ultimate in magnetic shielding. Magnetic Shield Division's general-purpose zero gauss chamber offers a significant reduction in both static and time varying fields found in laboratory and research environments. Degaussing coils can be furnished, and a Helmholtz coil system can be incorporated to generate known fields. Three concentrically spaced CO-NETIC chambers with closed ends and removable covers are provided. Placement of openings is optional. Attenuation in excess of −60 db is typical.
Request catalog ZG-2





MICA INSULATORS

Available in sheet, wafer, flakes and ground form. Clear, natural and built-up sheet stock thicknesses from .002″ to .062″. Save tooling expense on a wide variety of fabricated parts, including semi-conductor insulators in .002″ to .003″ thickness with .002″ hole tolerances. Excellent heat resistance and high dielectric strength provide improved breakdown protection and increased efficiency of electronic components. Request catalog K-14.

WIRE MESH SHIELDING MATERIAL

TECHNICAL DATA

TECKNIT is a reliable source for a wide variety of EMI shielding materials. One of the most popular is supplied in the form of wire mesh. Almost any metal which can be drawn into a wire can be used by TECKNIT to provide the most effective EMI shielding to fit a specific application.

STANDARD WIRE MATERIALS

"X" CODE	MATERIAL
1	Monel 0.0045″ dia.
2	Aluminum Alloy 0.005″ dia.
3	Brass, Silver-plated 0.0045″ dia.
4	Tin-coated, Copper-clad steel 0.0045″ dia.
6	Tin-plated Phosphor/Bronze 0.0045″ dia.

TECKNIT wire shielding materials are produced in a variety of styles and configurations to meet any application. Some are wire mesh alone and others have elastomer cores and some are preformed gaskets. The variety is nearly infinite.

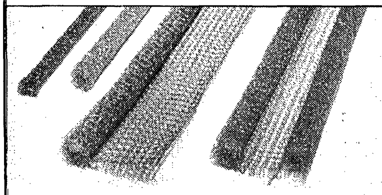
Many factors beyond price affect the design of EMI shielding. These include physical, environmental and electrical factors. If for example, an enclosure cover will be opened seldomly and the equipment is operating in air at room temperature, a simpler shield may suffice. But, if a physical seal is needed, another style of shield will be needed.

For sheet metal enclosures, round or finned strips are preferable to allow for minor misalignments. Rectangular strips are generally used for cast or machined enclosure covers. A double knitted shape compressed to 75% of original height provides the optimum shielding in most cases and is superior to a single shape. The single shape decreases shielding 5 to 10 dB.

A most effective EMI shield can be applied to any wiring harness by using TECKNIT wire mesh strip which is helically wrapped over the harness to shield against static discharge and grounding.

Brief descriptions of a broad range of TECKNIT products appear on the following pages. For complete catalog data or technical assistance call TECKNIT. TECKNIT can custom design an effective EMI shielding product for any application.

WIRE MESH GASKET MATERIAL



TECKNIT STRIPS provide Total Shielding Effectiveness up to 120 dB from 1.0 kHz to 10.0 GHz. Compression for round forms should be from 5 to 25 psi and 10 to 60 psi for rectangular shapes. A sampling of standard parts appears to the right. The "X" refers to metal used. See list in heading. Data sheet A-200.

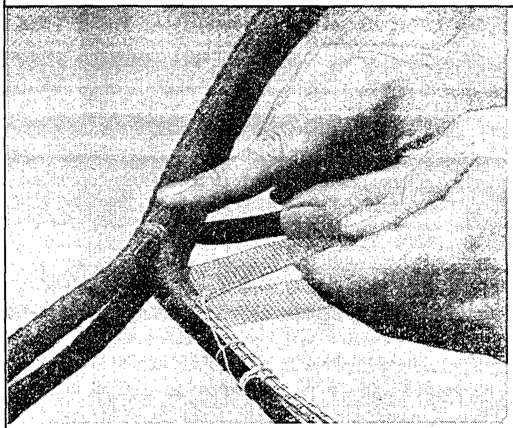
WIRE MESH SHIELDING MATERIAL

WIRE MESH SHIELDING TAPE



Applies to any harness by helically wrapping. Prevents static charge buildup with minimum bulk and excellent physical protection.

DESCRIPTION

Double layer strip of knitted tin-coated copper-clad steel wire. Provides more EMI shielding than any comparable material or tape.

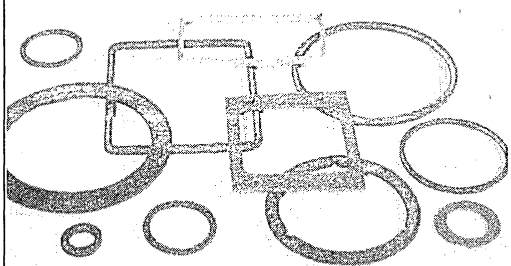
APPLICATIONS

Particularly effective as primary or secondary shielding for electrical or electronic cables and harnesses. Closely conforms to irregular shapes adding very little to overall diameter and weight.

SPECIFICATIONS

Supplied in 25 & 50 ft. or continuous spools from 1000 to 2500 ft. Standard width: 1.00″. Thickness: 0.02″. Weight: 8.0 oz/100 ft. Pull strength: 50 lbs. Elongation: 100%. Necking: 47% at 25 lbs. (75% at 50 lbs.). Corrosion resistance and Solderability: Excellent. Data sheet A-230.

DIE-COMPRESSED MESH GASKETS



Made from compressed knitted wire with no joints or splices for the ultimate in EMI shielding. Smallest practical size is 3/16″ OD with 1/16″ ID.

DESCRIPTION

Manufactured to custom specifications. Most types are rings, but other shapes are available and can be supplied with mounting holes or recesses. The material is die-compressed from knitted wire to form desired shape.

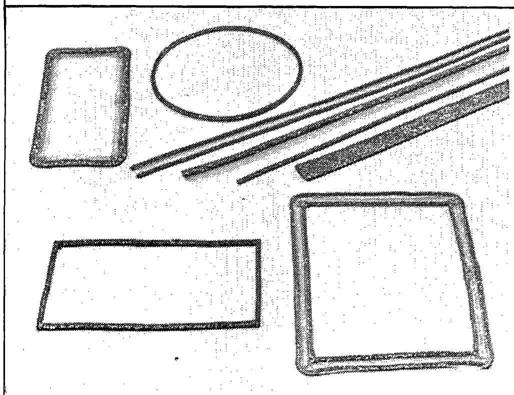
APPLICATIONS

For CATV, microwave ovens, waveguide flanges, shaft seals and the like. Gaskets can be manufactured as small as 1.59 mm (.063 in.) I.D. and 4.78 mm (.188 in.) O.D. Maximum gasket size is 305 mm (12 in.) circumference.

SPECIFICATIONS

Available in four metals: Tin-plated Phosphor/Bronze (best performance), Monel, Silver-plated Brass & Tinned Copper-clad Steel. EMI effectiveness from 200 kHz to 10 GHz with a peak of 130+ dB at 1 MHz (3″ ring). Data sheet A-300.

CUSTOM MESH GASKETS



Custom made from any standard wire mesh shape and assembled to fit specific applications. May be mesh alone or in combination with other sealants.

DESCRIPTION

Made from any TECKNIT strip material with or without elastomer core (See previous page.) Available with fiberglass cores for special applications.

APPLICATIONS

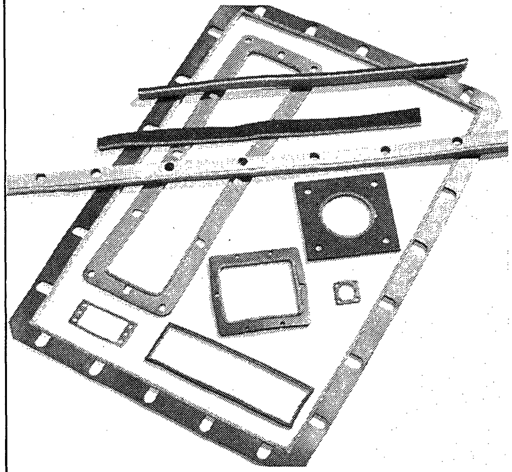
Ultra-conformal nature of these gaskets allows them to be used wherever EMI shielding is a must. May be held in place by rivets, clips, spotwelds or adhesives.

SPECIFICATIONS

Shielding ability the same as the materials these gaskets are made from as detailed in previous products. For custom applications contact TECKNIT. Data sheet A-310.

WIRE MESH SHIELDING MATERIAL

WIRE MESH WITH ELASTOMER SEAL

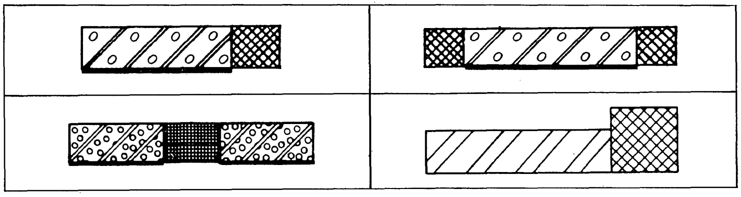


DESCRIPTION

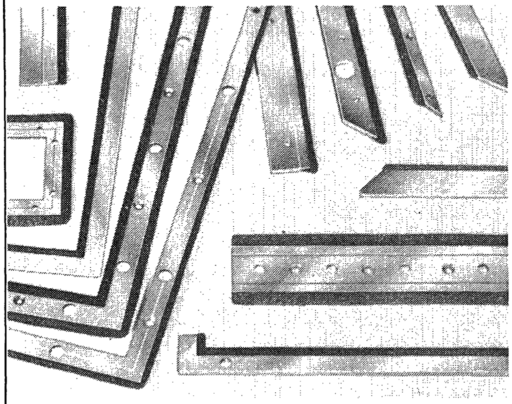
Regular wire mesh EMI gaskets in combination with elastomer gaskets for sealing against air or moisture leaks. The illustrations below are but four normal combinations. Others are available. Can be supplied with solid stops to prevent over compression of the EMI seal.

SPECIFICATIONS

Mesh specifications follow those of the other TECKNIT EMI materials. Elastomer specs depend on type used. Solid silicone may be used over a range of −62° to +260°C. Ask TECKNIT for complete details and recommendations. Data sheet A-431, DUOSTRIPS and DUOGASKETS.



WIRE MESH WITH ALUMINUM STRIP

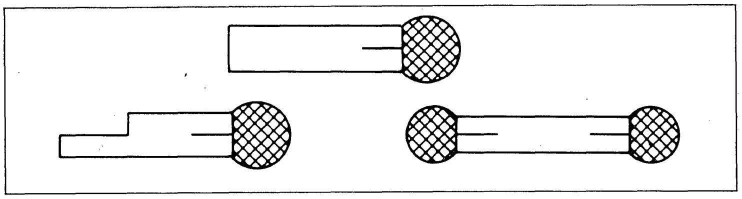


DESCRIPTION

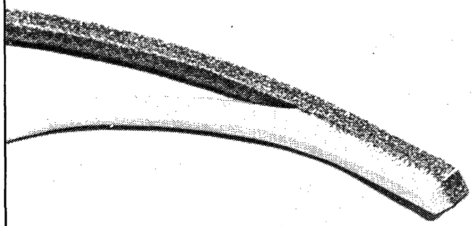
Available in lengths up to 15 feet or custom assembled. Regular TECKNIT wire mesh EMI gasket material applied to solid aluminum extrusions in virtually any imaginable shape. The drawings below show three typical shapes.

SPECIFICATIONS

Normally supplied with Monel or Tinned Copper-clad Steel wire mesh attached to 6063-T1 aluminum alloy extrusions. Neoprene and silicone sponge cores available. Temp. range with silicone sponge is −75° to +205°C. Data sheet A-510, TECKSTRIP®.



COMPOSITE WIRE MESH AND SILICONE RUBBER STRIP

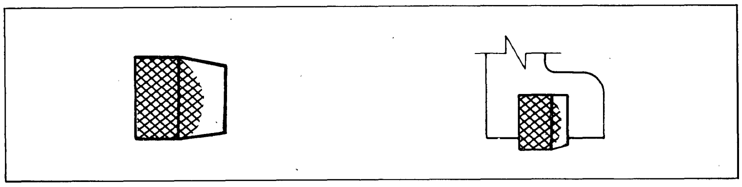


DESCRIPTION

Monel wire mesh partially imbedded in cured silicone rubber for both military and hi-rel commercial applications. Ideal for installation in cast or machined grooves in enclosures and/or doors. The small cross section saves space and weight. Drawing shows standard cross section.

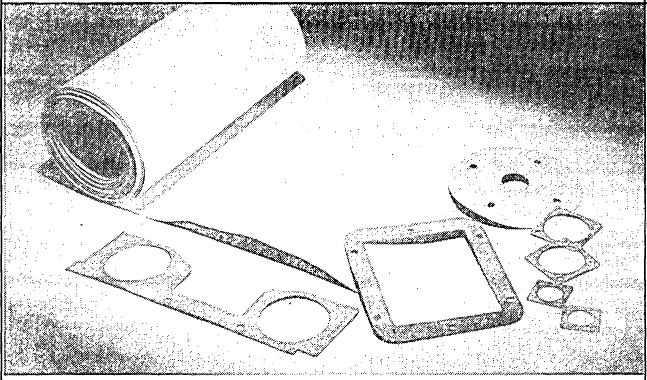
SPECIFICATIONS

Wire mesh is Monel per QQ-N-281, Class A or AMS-4730. Sealant is Silicone rubber ZZ-R-765, Class 2A, Grade 50. Color: Gray. Brittle point: −73°C. Composite peel strength: 5.25 N/cm (31 lbf/in.) min. Temp.: −62° to +260°C. Data sheet A-800, DUOSIL®.



METAL FIBERS AND SCREENS

WIRE SCREEN IMPREGNATED WITH ELASTOMER



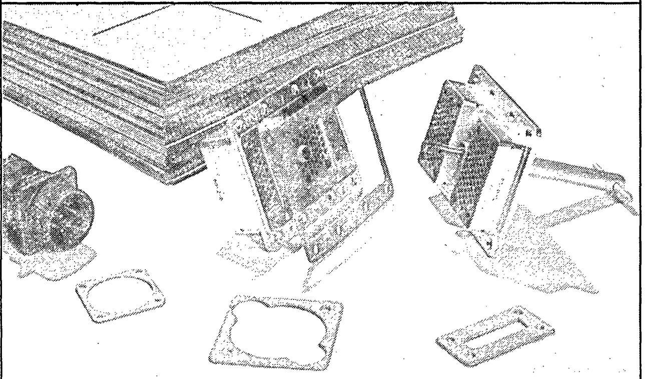
DESCRIPTION

TECKNIT DUOLASTIC solves the dual problem of sealing against liquids and providing an EMI shield. Made of woven aluminum wire screen impregnated with neoprene or silicone fluid sealing material. Both mating surfaces contact the screen as the sealant makes the joint pressure tight.

SPECIFICATIONS

Provides 75-100 dB shielding to 1 GHz. Oper.: −40° to +100°C (Neoprene), −62° to +260°C (Silicone). Thickness: 0.016″ & 0.020″. Max. Size: 8″ wide x 50′ long. Data sheet B-420.

THIN GASKETS OF SINTERED METAL FIBER



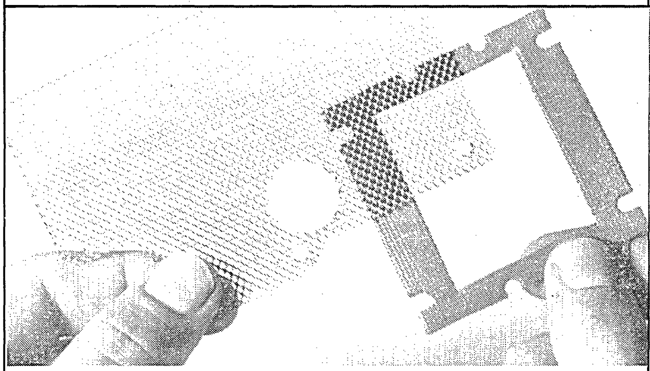
DESCRIPTION

TECKFELT® is made of felt/metal fiber in sheet form. Unfilled for normal use. Filled with silicone elastomer to seal against fluids. Supplied in sheets 12″ x 15″ x 0.031″ or 0.063″ thick.

SPECIFICATIONS

Operate: −40° to +200°C. Shielding at 20 psi: (E field) 105 dB (10 kHz) to 65 dB (1.0 GHz), Max. 110 dB (1.0 MHz). Metal Fibers: Steel alloy 347 (Fed Std. 66). Data sheet B-450.

EXPANDED METAL GASKETS



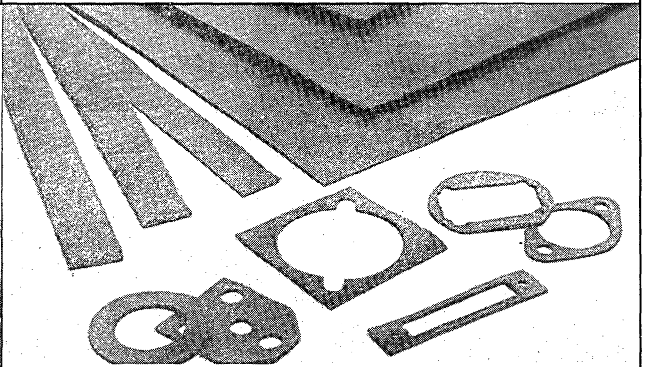
DESCRIPTION

TECKSPAN is made in sheets up to 7.5″ wide x 10′ long of Monel or Aluminum. Plain metal for simple EMI shielding or impregnated with silicone for fluid sealing.

SPECIFICATIONS

Oper.: −62° to +260°C with silicone. Closing force 50 psi. Shield: 75 to 100 dB to 1.0 GHz. Two thicknesses: 0.020″ & 0.032″ filled or unfilled. Data sheet B-480.

NICKEL FIBER-FILLED SILICONE ELASTOMER



DESCRIPTION

CONMAX® is a composite of randomly oriented nickel fibers uniformly dispersed in a silicone elastomer. May be die cut for EMI gaskets that shield to 135 dB (1 MHz) and withstand 150 psi closure force. Data sheet B-830.

SPECIFICATIONS

Oper.: −54° to +232°C.

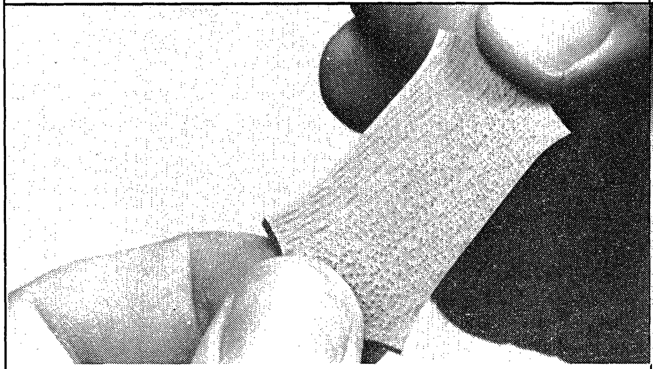
ORIENTED WIRE SHIELDING MATERIAL

IN SILICONE RUBBER (ELASTOMET®)



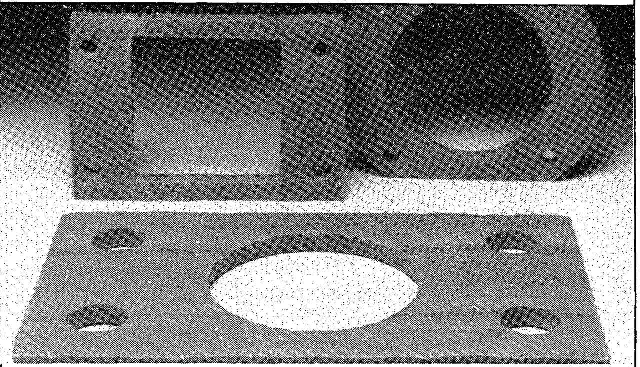
DESCRIPTION

Monel, Tin-plated Phosphor Bronze, or Aluminum wires oriented, embedded and bonded in a solid silicone elastomer to provide excellent EMI shielding and sealing in strips or sheets.

SPECIFICATIONS

Sheets available up to 9″ x 36″. Strips available up to 1″ x 11′. Wires are convoluted to provide springing action and distributed 960/sq. in. Oper.: −55° to +200°C. Data sheet C-820.

IN SOFT SILICONE SPONGE (ELASTOFOAM®)



DESCRIPTION

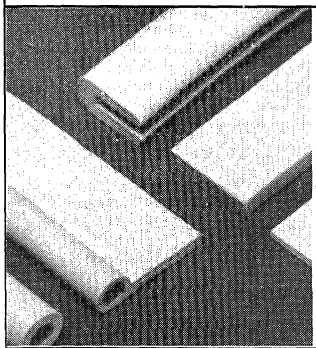
Monel, Tin-plated Phosphor Bronze, or Aluminum wires oriented, embedded and bonded in a soft closed cell silicone sponge elastomer. For closures with irregular surfaces and/or frequent access. In strips or die cut gaskets.

SPECIFICATIONS

Oper.: −55° to +170°C. Thickness: .062″ to .500″. Width: .125″ to 1.000″. Convoluted wire to provide spring action 960/sq. in. Max. compression: 20% (Mechanical stops recommended to prevent over-compression). Data sheet C-880. Standard strip length is 11′.

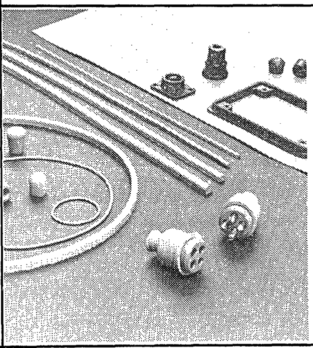
CONDUCTIVE ELASTOMERS

EXTRUDED SILVER-FILLED SILICONE



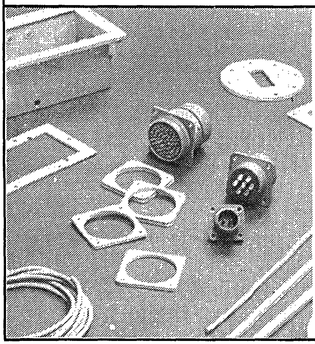
CONSIL®-E is a solid continuously extruded silver plated particle filled silicone elastomer material that provides excellent EMI shielding in six standard forms: solid round, tubular, solid "D", finned tubular, solid "U" and solid rectangular in strips to specification. Operate from −51° to +177°C. Data sheet D-810.

MOLDED SILVER-FILLED SILICONE



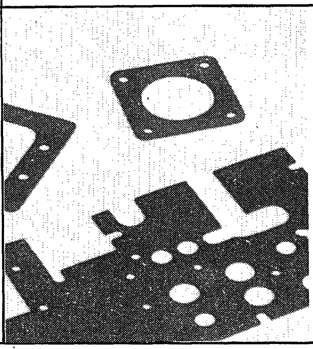
CONSIL®-II is a solid silicone elastomer filled with silver coated particles providing high conductivity and broadband shielding (>75 dB). Available in strips, sheets, molded shapes and die cut flat gaskets. Operate from −51° to +177°C. Maximum length for strips is 24″. Data sheet D-840.

PURE SILVER-FILLED SILICONE



CONSIL®-R is similar to CONSIL®-E & -II except the particles are pure silver for minimum resistance (0.006 ohm-cm). Available in extrusions or as strips, sheets, molded shapes and die cut gaskets. Operate from −51° to +177°C. Data sheet D-850.

CARBON-FILLED SILICONE



SC-CONSIL provides good electrical conductivity at lower cost. It is available in strips, sheets up to 12″ x 18″, extrusions and as molded parts. Particularly suitable as door gaskets in extruded form. Operate from −54° to +227°C Data sheet D-860.

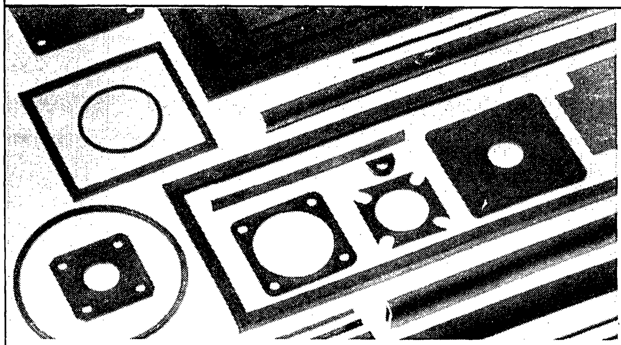
SILVER-COPPER FILLED SILICONE ELASTOMER

CONSIL-C



DESCRIPTION

A silicone elastomer filled with silver plated copper particles to provide broadband shielding effectiveness with excellent moisture sealing for enclosure joints and seams. CONSIL-C is available in sheets up to 12″ x 18″ and die cut flat gaskets. Standard rectangular, round and solid "D" shapes are available in a wide range of sizes. Hollow strip forms are available on special order.

APPLICATION

CONSIL-C is used for seals for military/aerospace systems, waveguides and connectors. Recommended compression is 5% at 50 to 200 psi closure force depending on cross section. Typical performance at 10 GHz is 90 dB with a 100 pound closure force. The material is gray with a smooth texture. Data sheet D-870.

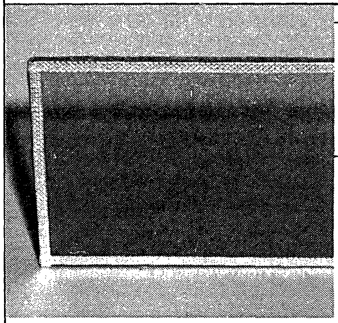
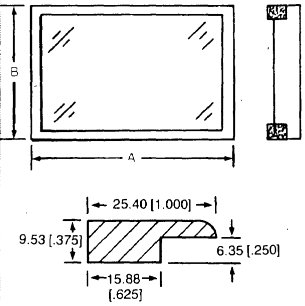
HIGH PERFORMANCE EMC WINDOWS

TECKSHIELD-F





DESCRIPTION

These windows provide optimum optical transmission and excellent EMI shielding in severe interference environments. They are used in "TEMPEST" Visual Display Units (VDU) as well as in printers and enclosures requiring large viewing apertures. A special blackened mesh is laminated between two sheets of flat glass or acrylic. The edge termination is complete around the perimeter connecting the mesh to the outer TECKNIT DUOGASKET®. Full lamination prevents moisture intrusion and improves optical performance. Options include an outer aluminum frame, polarizers, glare reducers and color filters. Maximum size is 14″ x 18″ with a standard thickness of 0.205″. Data sheet E-712.

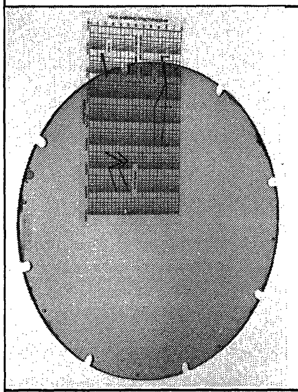
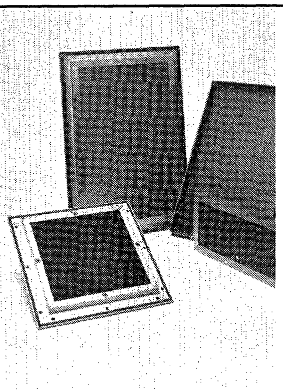
SHIELDING WINDOWS AND VENTS

ELECTRICALLY CONDUCTIVE & TRANSPARENT



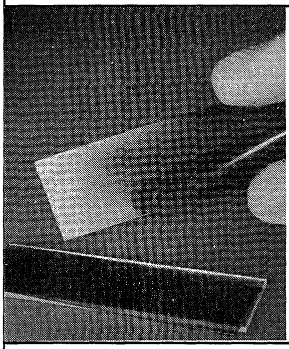
For use in applications requiring EMI shielding in flat or curved surfaces up to 18″ x 18″. For CRT, instrument and viewing use. Substrate may be any transparent material such as glass or plastic. The ECTC coating prevents EMI energy from entering or leaving the device. Standard mounting is by means of an aluminum frame for continuity. Data sheet E-700.

ALUMINUM HONEYCOMB AIR VENT PANELS



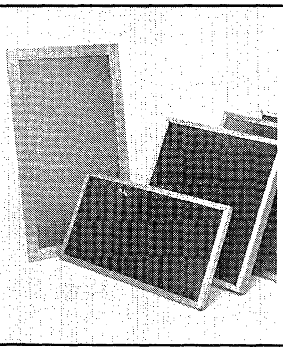
TECKCELL panels provide the maximum EMI shielding with minimum air flow restriction and at lowest possible cost because of standardized construction. Available in a wide variety of standard sizes to fit openings from 2″ x 2″ to 18″ x 18″. A chromate finish is standard on the aluminum frames. Many custom sizes can be supplied. Available with rainshield and foam filter. Data sheet F-600.

TRANSPARENT CONDUCTIVE COATING ON POLYESTER FILM



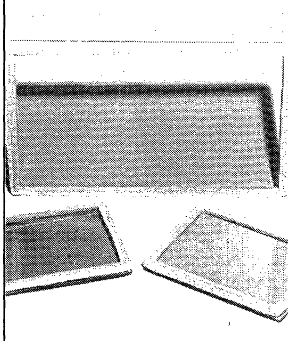
TECKFILM. For application to any transparent panel in sizes up to 24″ x 24″. Only .005″ thick and transparent. Vacuum deposited gold with a protective ceramic overcoat. Haze is 5% or less. Electric field shielding is 140 dB at 1 kHz decreasing to 25 dB at 10 GHz. Easy to apply to any clean flat surface. Data sheet E-701.

STEEL HONEYCOMB AIR VENT PANELS



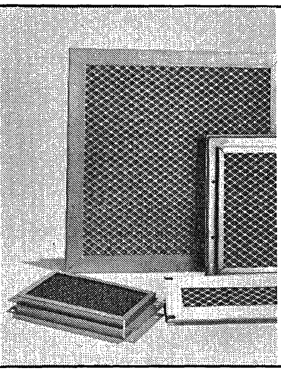
TECKCELL Steel Panels provide increased magnetic shielding performance at low frequencies and are mechanically more rigid than aluminum TECKCELL. Standard sizes fit openings from 2″ x 2″ to 18″ x 18″. Custom sizes, rainshields and foam filters are available. Data sheet F-620.

LAMINATED SHIELDING SCREEN



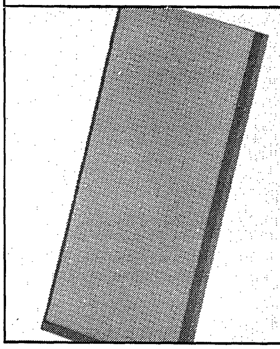
Laminate consists of ultrafine Monel wire knitted mesh between transparent acrylic sheets of any desired color and up to any practical size. An EMI gasket contacts the inner mesh at the outer edges of the panel perimeter to provide complete current path. Available with polarizers and nonglare surfaces. Effective from 1 kHz to 100 MHz. Data sheet E-710.

DUST ARRESTING ALUMINUM AIR VENT PANELS



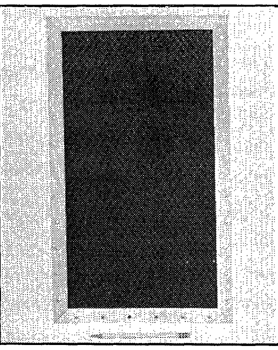
TECKSCREEN panels have a permanent all-metal filter medium, frame and interface EMI gasket. Both faces of the panel have a protective expanded metal grille. Basic construction is aluminum with a chromate finish. Sizes same as standard TECKCELL vents. May be used with most standard cooling fans. Data sheet F-630.

CAST EMC WINDOWS



Custom designed cast acrylic windows in any color with fine wire knitted mesh EMI shielding cast in place. Thicknesses: .060″ & .125″. Sizes up to 18″ x 22″. Mesh is Tinned copper-clad steel or Monel. An outer EMI seal must be used to provide current path. Effective from 1 kHz to 10 GHz. Data sheet E-711.

THIN DUST/EMI FILTER PANELS



TECKAIRE® panels are ultra thin and feature a viscous (water soluble hydrocarbon oil) coating for trapping dust. Frame is only .188″ thick including EMI gasket. May be EMI self-gasketed for minimum surface projection (.180″) with decreased opening size. All made to custom requirements with excellent EMI shielding. Data sheet F-640.

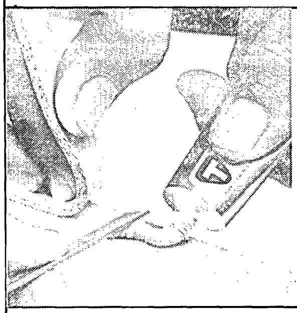
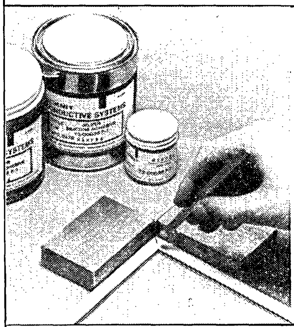
CONDUCTIVE SYSTEMS

SILVER-FILLED SILICONE RTV



The CON/RTV-I system is a pure silver loaded, one component RTV silicone adhesive/sealant. Ready for use without mixing. Cures quickly (Tack free 2 min.) (Handle in 2 hrs.) at room temperature to form seal or bond gaskets to surface. Supplied in 2 oz. tube. Shelf life sealed, 4 mos. Oper.: −60° to +175°C. Resistivity: 0.01 ohm-cm. Data sheet G-721.

SILVER, NICKEL OR CARBON FILLED

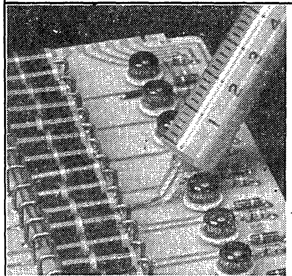


Two part RTV adhesive/sealants in choice of silver plated, nickel or carbon particles dispersed in a silicone rubber medium which cures to 80% full strength at room temperature in 24 hrs. In 1, 8 or 16 oz. packages with a shelf life as sealed of 6 mos. and a pot life (covered) of 4 hrs. Store at +5° to +30°C. Resistivity (ohm-cm): Silver (0.01), Nickel (0.10), Carbon (100). Data sheet G-722.

SILVER-FILLED FLEXIBLE RESIN

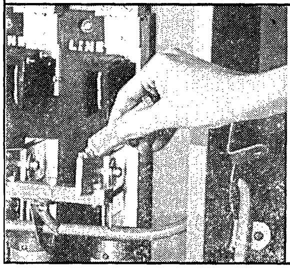
One part silver/acetate or silver/silicone caulking material with silver coated particles for best conductivity. Better than any carbon or copper system at lower cost. Apply silver/acetate with brush, silver silicone with spatula or caulking gun. Supplied in 1 lb. packages. Set up: 4 hrs. Tack free: 15 min. Data Sheet G-723.

SILVER-FILLED EPOXY



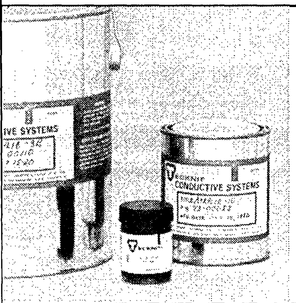
Two part system of epoxy resin and hardener. Choice of flexible cure with silver plated particles or rigid cure with pure silver particles. Low resistivity: 0.02 ohm-cm (Flex.), .001 ohm-cm (Rigid). Cure time: Room 24 hrs.; +99°C 30 min. Light creamy paste. Apply with caulking gun. Ideal for waveguides. Data sheet G-724.

SILVER-FILLED SILICONE GREASE



One part system for use on high current sliding electrical contacts. Supplied in handy tubes or jar with indefinite shelf life. Operate: −54° to +232°C with a drop point of +220°C (min.). Prevents contact corrosion. Use on ball & socket joints of insulators to prevent EMI. Data sheet G-725.

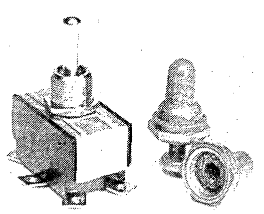
CONDUCTIVE ACRYLIC & LATEX



Provides excellent EMI shielding with attractive finish. Acrylics are sprayable in variety of colors: Silver-gray, beige, gray & black. Latex (beige) can be applied with spray, dip or brush. Available as beige emulsion. All 4H pencil hard. Translucent insulating dielectric sprayable overcoat also available. Data sheet G-730.

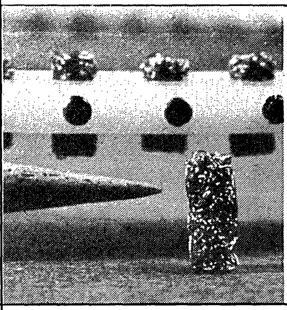
SHIELDING COMPONENTS

EMC SWITCH SEALS



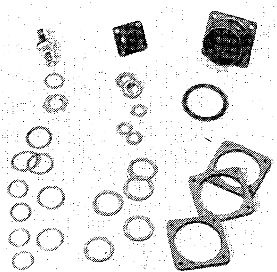
Provides positive physical and EMI seal for standard toggle switches. Replaces standard mounting hardware. Monel wire mesh shield with silicone rubber boot in 3 standard sizes. Also available as shaft seal for ⅛" & ¼" shafts. Data sheet H-902.

FUZZ BUTTON



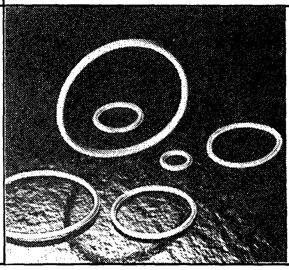
Resilient, low-impedance, multipath contact elements for use as connectors in switches, earphones and the like. Available in diameters from .062" to .500" and heights from .062" to .500" in a wide choice of materials such as gold plated copper/silver, Monel, silver plated brass, etc. Resistivity 5-7 milliohms when loaded. Data sheet H-901.

EMI CONNECTOR GASKETS



Standard EMI shielding gaskets to fit most round (flanged) MIL and commercial connectors. Available in all regular TECKNIT EMI gasket materials such as DUOLASTIC, TECKFELT, etc. Complete list of all standard sizes and types is in data sheet H-903.

CONDUCTIVE "O-SEALS"



Resilient rings of CONSIL®-II silicone elastomer in round or rectangular cross section. Combine high electrical conductivity with pressure seal. For use only on static seals (No relative motion). Used on MIL and commercial connector shells and as replacement for MIL MS-29513 items. Data sheet H-904.

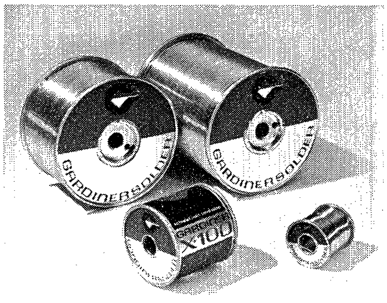
GARDINER SOLDERING PRODUCTS

GARDINER SOLID & FLUX CORED WIRE SOLDERS



Solid Wire Solder: Uniform in diameter and alloy and are equal to flux cored solders in purity and quality. All standard diameters.
WW-300 Rosin Cored Wire Solder: Available in any solder alloy, many wire sizes and flux core percentages. Conforms to Fed. Spec.: QQ-S-571, Type R.
XM-200 Mildly Activated Rosin Cored Wire Solder: For use with easily solderable metals whose surface tarnish is not easily removed. Meets Fed. Spec.: QQ-S-571, Type RMA.
X-45 Highly Active Rosin Cored Wire Solder: Meets Fed. Spec.: QQ-S-571, Type RA.
X-55 Activated Rosin Cored Wire Solder: For super-critical electronic circuits. Activator leaves only pure rosin residue. Conforms to Fed. Spec.: QQ-S-571, Type RA.

X-90 Super Activated Rosin Cored Wire Solder: For use when activated Rosins fail to remove heavily oxided films on metals.

OR-300 Organic Flux Cored Wire Solder: Developed to overcome problems inherent with difficult-to-solder metals.

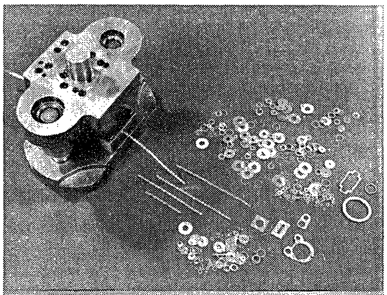
OR-350 Organic Flux Cored Wire Solder (Water Soluble Residues)- A halide-free solid flux core developed for soldering electronic devices compatible with water.

OR-400 Organic Flux Cored Wire Solder: For difficult-to-solder metals which cannot be soldered with activated Rosin fluxes.

OR-500 Organic Flux Cored Wire Solder: For difficult-to-solder parts due to mass or a heavily oxidized coating.

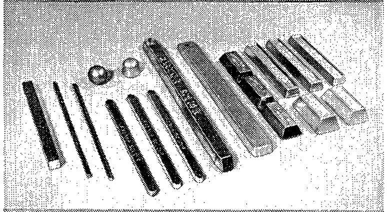
X-100 Activated Rosin Cored Wire Solder: Conforms to Fed. Spec.: QQ-S-571, Type RA.
Mildly Activated and Activated Solder Pastes: Available in any solder alloy and in particle sizes from 200 to 325 mesh, Mildly Activated and Activated Rosin Flux Pastes adhere to Fed. Spec.: QQ-S-571, Type RMA or Type RA.
GSP-5800 Organic and GSP-6800 Inorganic Chloride Solder Pastes: Available in all solder alloys and in any particle sizes from 200 to 325 mesh. Flux residues are water-soluble.

GARDINER SOLDER PREFORMS



Solid or Flux Cored Solder Preforms: Rings, washers, discs, sleeves, pellets or segments in any alloy, flux type and percentage, for reliable, automated electronic soldering.

GARDINER PURE-A-LOY BAR SOLDERS & ANODES



PURE-A-LOY Cast and Extruded Bar Solders: Purest, electronic solder commercially available. Exceeds QQ-S-571 and ASTM specifications.
PURE-A-LOY Extruded Anodes: Advantages: 1. Uniform oxidation and maximum life anodes. 2. Faster plating. 3. Less sludging and necking. 4. Bright, dense and uniform plated coating.

GARDINER FLUXES & RELATED PRODUCTS

Series GF-1000 Water-white Rosin Flux: Removable residue. Meets Mil-F-14256, Type R.
Series GF-1100 Water-white Rosin Flux: Same as GF-1000 but much faster drying action.
Series GF-1200 Mildly Activated Rosin Flux: Conforms to Mil-F-14256, Type RMA.
Series GF-1400 Super Mildly Activated Rosin Flux: Conforms to MIL-F-14256, Type RMA while nearly matching power of Mil-approved RA flux.
Series GF-2000 Activated Rosin Flux: Highly stable flux having an excellent wetting action.
Series GF-2100 Activated Rosin Flux: For foaming application in automated soldering.
Series GF-2200 Activated Rosin Flux: Designed for the very-hard-to-handle soldering jobs.
Series GF-2300 Activated Rosin Flux: For automatic soldering.
Series GF-2400 Mildly Activated Non-Halogen Rosin Flux: Designed for foaming application.
Series GF-2500 Activated Rosin Flux: Rosin Flux used in Gardiner X-45 cored wire solder.
Series GF-2600 Activated Rosin Foam Flux: Meets Federal Specification Mil-F-14256.
Series GF-2700 Activated Rosin Liquid Flux: Meets the Mil-F-14256 amendment of 1975.
Series GF-2800 Activated Rosin Flux: Conforms to QQ-S-571, amendment of June 1975.
Series GF-5100 Aquasolv Organic Flux: Water soluble, easily removable.
Series GF-5300 Aquasolv Organic Flux: For automated soldering of printed circuit assemblies and printed circuit cards using the Hydro-squeegee Process. Residues are completely removed.
Series GF-5400 Aquasolv Organic Flux: For electronic components compatible with water.
Series GF-5500 Aquasolv Organic Flux: For reflow soldering of plated circuit boards.
Series GF-8000 Surf-Klean Copper Cleaner: For removal of thick tarnish films.
Series GF-8500 Surf-Seal: For printed circuit boards during extended storage.
GFT-3000 Rosin Flux Thinner: For GF-2000 Activated Rosin Flux.
GFT-3100 Rosin Flux Thinner: For GF-1000 WW Rosin Flux.
GFT-3200 Rosin Flux Thinner: For organic fluxes GF-5132 and GF-5425.
GFT-3300 Rosin Flux Thinner: For GF-2100F.
GFT-3400 Rosin Flux Thinner: For GF-2300 and GF-2400 Activated Rosin Fluxes.
GFT-3500 Rosin Flux Thinner: For GF-2400F and GF-2600F Activated Rosin Fluxes.
GFT-3600 Rosin Flux Thinner: For GF-1100 and GF-2200.
GFT-3700 Rosin Flux Thinner: For GF-2700F.
GFT-3800 Rosin Flux Thinner: For GF-2200.
GFT-3900 Rosin Flux Thinner: For GF-2800F.
GFR-4000 Rosin Flux Remover: May be used in a vapor degreaser.
GFR-4060 Rosin Flux Remover: Similar to 4000 but a little more active.
GFR-4100 Rosin Flux Remover: Dissolves rosin residues, ionic soils, greases and oils.
GFR-4300 Rosin Flux Remover: For cleaning polycarbonate resins.
GFR-4420 Rosin Flux Remover: Dissolves rosin residues, ionic soils, greases and oils.

Gardiner Solder Analysis Program

Analysis of solders-in-use is necessary for avoiding problems of tin depletion and foreign metal contamination.

Gardiner Test Laboratory now offers a selection of three groups of solder analyses. Each group is designed specifically to control the level of soluble metals introduced during the soldering process. Issued to the customer with each analysis is a typed laboratory report with a brief assessment of contamination.

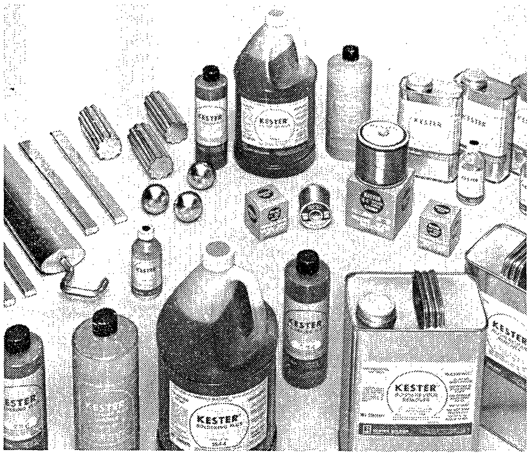
PROBLEM SOLVING TECHNOLOGY FOR EVERY SOLDERING NEED.



More than eighty years experience in the solder industry stand behind every Kester product. The Kester name means product purity . . . technological superiority . . . the highest standards of business practice . . . experienced, qualified personnel . . . and competitive prices. The complete line of Kester solders, fluxes and related chemicals are manufactured in five plants, assuring fast shipment at the lowest cost.

With world-wide research facilities, Kester traditionally leads the industry in product development and problem solving. Customers are encouraged to call on Kester for technical assistance in the field, regional lab support and soldering analysis services.

At Kester, we're dedicated to helping you meet your solder & chemical requirements with the best products and services available in the world today. Write or call for detailed literature on the complete line of Kester products for your industry.

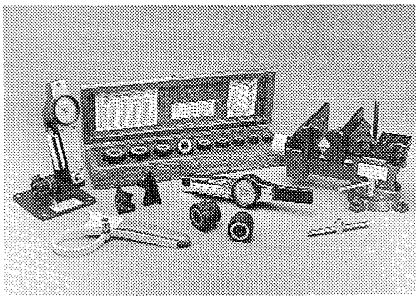
INSTALLING/REMOVAL TOOLS (MIL-I-81969)

DMC offers a full line of military and commercial installing and removal tools. Below is a partial listing.

MS3159	MS17805	MS27534
MS3160	MS17806	M83723
MS3447	MS24256	MS90455
MS3448-001	MS27495	MS90456

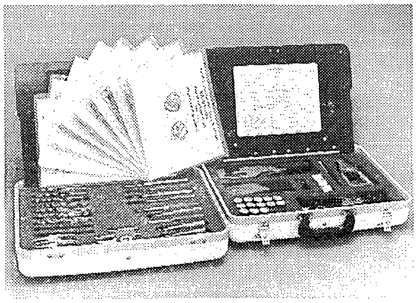
Plus many commerical tools.



NEW BETA™ TOOLS

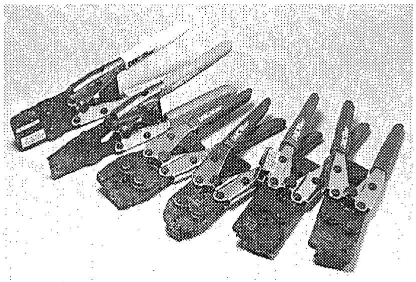
DMC offers a full line of assembly/maintenance tools for circular connector assemblies. The following elements are contained in the BETA™ kit.

- Connector adaptor holding tools
- Strap wrenches
- Circular vises for connectors
- Connector/safety wire pliers
- General purpose custom tool kits - Mil-Spec type kits or custom designed to your requirements.
- Jam nut socket tools
- Connector index/assembly tools
- Torque meters/torque wrenches



CONNECTOR SYSTEMS SERVICE KITS

A complete "Tools and Information Package." Includes tooling, cross reference part #'s and application diagrams in a durable case. Kits are designed by DMC for the assembly and service of connector systems. Typical applications include aircraft, missile systems and military vehicles.



COMPOUND LEVERAGE TOOLS (GMT)

For stamped and formed contacts, hex dies, terminals and other applications.

For further details consult your nearest DMC sales representative or contact the factory directly. Catalog available upon request.

BUT IT CAN DESTROY YOUR BEST DESIGN

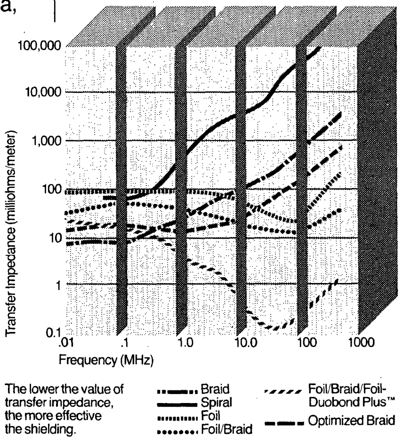
The next time your performance is measured by the success of your system's design, take a closer look at the critical link: will the shielded cable you select maintain signal integrity? At Belden, we're working to protect this critical link.

Shield Effectiveness
With the convergence of data, audio and video transmissions, one of the greatest challenges is to preserve the integrity of each signal. This evolution of technology, coupled with the need to comply with FCC regulations has created a growing demand for sophisticated cable shielding.

Belden responds to these demands with innovative shielding designed to meet the highest performance standards in the industry—including military TEMPEST requirements.

Belden helps you control interference and protect signal integrity with innovative shielded cable

Transfer Impedance Test Results



Test Methods Protect Your System
To help you define interference problems, Belden's Technical Research Center evaluates the development, implementation and refinement of shields and shield effectiveness testing. Our Transfer Impedance Test is but one of many rigorous tests employed by Belden engineers. The procedures we use help you select the proper shielded cable that results in cost-effective system performance.

Effective Assistance
Belden has recently published a *Cable Shield Performance and Selection Guide.* It's free, and it helps you define your interference problem, acquaints you with current FCC regulations, and familiarizes you with the trade-offs associated with different shield designs and Belden's various test procedures for measuring shielding effectiveness. Shield performance results are detailed from each test to properly guide your cable selection.

Contact Belden today for your free personal copy. Belden Electronic Wire and Cable, P.O. Box 1980, Richmond, IN 47375. Phone: 317-983-5200.

There is no equal.

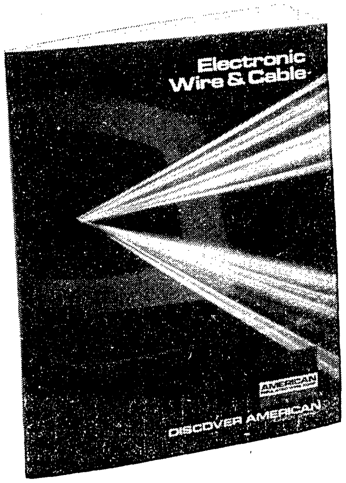
Discover a New World of Electronic Cable

American's world . . . over 21,686 electronic cable specs



- Extensive manufacturing capability to fill large or small orders.
- A nationwide network of stocking warehouses.
- Competitive pricing.
- Easy-to-use cross-reference.
- Custom engineering and design capabilities.

LEGEND:
BC = Bare Copper
CW = Bare Copper Covered Steel
EPR = Ethylene Propylene Rubber
FEP = Florinated Ethylene Propylene
FPE = Cellular (foam) polyethylene
HYP = Hypalon (DuPont™)
NVC = Non-Contaminating PVC
NEO = Neoprene
RUB = Rubber
PE = Polyethylene
PP = Polypropylene
PVC = Polyvinyl Chloride
SC = Silver Coated Copper
SSP = Semi-solid polyethylene
TC = Tinned Copper
XLP = Cross-linked Polyethylene

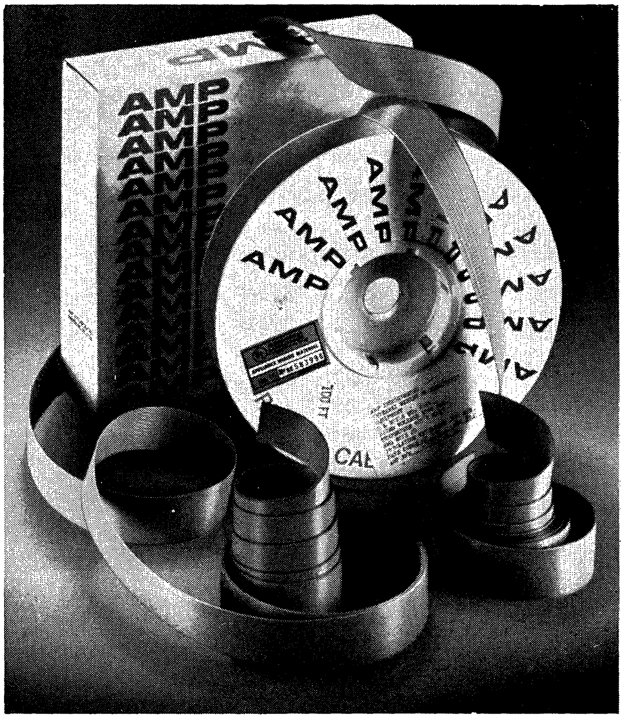
***AVAILABLE SHIELDS:**
- Aluminum/Polyester Tape
- Bare or Tinned Copper Tape
- Bare or Tinned Copper Braid
- Spiral Wrapped Tinned Copper

Celebrating 60 years of service to the electrical and electronic industries.

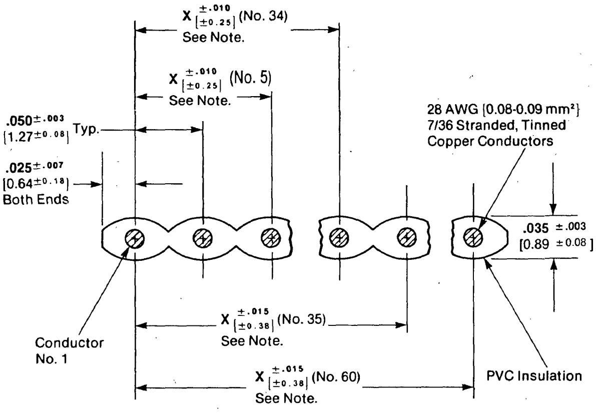
AMERICAN
INSULATED WIRE CORP.

36 Freeman Street • P.O. Box 880 • Pawtucket, RI 02862 • 401-726-0700

AMP Ribbon Cable



Features: ■ Recognized under the component program of Underwriters Laboratories Inc. File No. E53793, UL Style ® 2651 ■ 100 feet [30.48 m] and 300 feet [91.44 m] lengths without splices ■ Available with evey fifth conductor marked in 100 foot lengths ■ Can be readily "ripped" or slit to obtain less no. of conductors ■ Symmetrical geometry for ease of registration while terminating on either side of cable ■ Manufacturing methods provide cable stability for consistently reliable terminations ■ Dark blue color stripe on number one conductor for easy cable orientation ■ Compatible with all slotted beam connector technologies on .050 [1.27] centers



X ±.010 [±0.25] (No. 34) See Note.
X ±.010 [±0.25] (No. 5) See Note.
.050±.003 [1.27±0.08] Typ.
.025±.007 [0.64±0.18] Both Ends
28 AWG [0.08-0.09 mm²] 7/36 Stranded, Tinned Copper Conductors
.035 ±.003 [0.89 ±0.08]
Conductor No. 1
X ±.015 [±0.38] (No. 35) See Note.
X ±.015 [±0.38] (No. 60) See Note.
PVC Insulation

Note: Tolerance of dimensions between conductors 1 and 5 thru 34 is ±.010 [±0.25]; tolerance between conductors 1 and 35 thru 60 is ±.015 [±0.38].

Temperature Rating: −20°C to +105°C
Voltage Rating: 300 volts per UL Style 2651
Insulation Resistance: 10,000 megohms per 10 ft. [3.05 m] (minimum)
Insulation Color: Gray, with dark blue stripe on conductor no. 1 only

No. of Conductors	100′ [30.48 m] Reel Part No.	100′ [30.48 m] Reel Marked every fifth conductor Part No.	300′ [91.44m] Reel Part No.

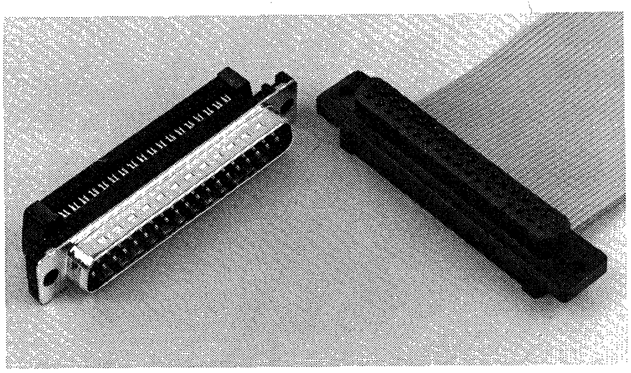
HDF-20 Low Profile Connectors

(for Round Conductor Flat Ribbon Cable)



Features: ■ Low profile design; .335 [8.51] max. from top of connector flange to back of cover ■ One-step termination of housing assembly and cover ■ Terminates .050 [1.27] centerline flat ribbon cable with 30 AWG [0.05 mm²] solid, 28 AWG [0.08-0.09 mm²] solid or stranded and 26 AWG [0.12-0.15 mm²] solid conductors ■ Mates with any standard AMPLIMITE subminiature HD-20 or military (D type) connector ■ Plug and receptacle assemblies, all plastic or with front metal shell, in 9, 15, 25 and 37 positions ■ Strain relief available ■ Available with 4-40 threaded inserts ■ Two-piece construction; UL recognized black thermoplastic, 94V-0 rated ■ Right-angle (90°) cable terminations ■ Contact centerline transition from .109 [2.77] at connector interface to .100 [2.54] (.050 [1.27] staggered) at cable termination ■ Duplex plated AMP-LATCH insulation displacement crimp contacts ■ No cable preparation required, except for cutting the cable end square ■ End-termination and daisy chain applications ■ Convenient circuit probe testing after cable termination

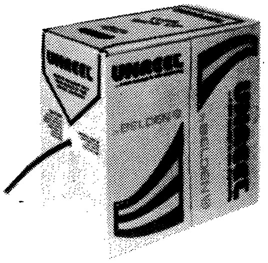
Belden "UNREEL®" Dispensers



- **Easy to use.**
- **Light in weight.**
- **Faster than standard reels.**
- **Easy to store and transport.**
- **No snagging, twisting and kinking.**
- **Not liable to backlash.**
- **Continuous feed-out system.**
- **Efficient throw away Packaging.**

Belden cables are available in unique "UNREEL" dispenser packs. "UNREEL" overcomes the problems associated with spools and reels. "UNREEL" is economical: so easy to use, it saves up to 30% of your time on every job, compared to conventional spool and non spool fed systems. To order, add the letter "U" before desired length. Example Belden Part No. 8451 Length U-1000.

PRODUCT DESCRIPTION:
Tinned copper, polypropylene insulated, twisted pair, 22 AWG tinned solid copper drain wire, BELDFOIL aluminum-polyester shield, paper wrap, gray or black PVC jacket. 100% shield coverage. Belden's Miniature Type Broadcast Audio and Instrumentation Cables occupy ½ to ⅔ less space than standard cables. The BELDFOIL shield combines high cable reliability with ease of termination.
Color code: Black, Red

Suggested working voltage: 200

**Capacitance between conductors.*
***Capacitance between 1 conductor and other conductor connected to shield.*
†Passes the VW-1 vertical wire flame test

SHIELDED AUDIO, CONTROL AND DATA CABLES

22 GAGE
SOLID CONDUCTORS .64 mm diam.

PRODUCT DESCRIPTION: *22 AWG tinned copper, PVC insulated, twisted pairs, each pair and its drain wire under BELDFOIL aluminum-polyester shield, overall chrome PVC jacket. Color code chart 3 in Technical Information Section. Insulation resistance between shields: 100 megohms/M nom. Capacitance between adjacent shields. 150pF ft. nom. Voltage breakdown between adjacent shields 1500 volts nom. Working voltage between adjacent shields 50 volts max. PVC insulation is used for ease of stripping and soldering. Recommended for audio frequency applications requiring excellent circuit isolation.*

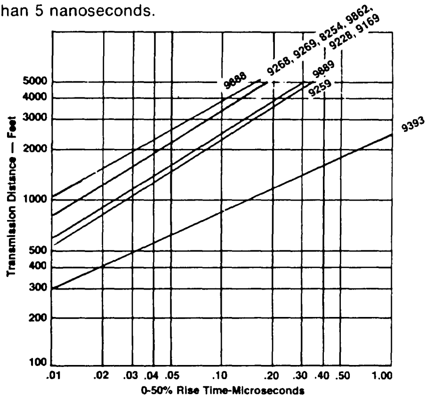
Coaxial Cables

COOPER INDUSTRIES BELDEN

Coaxial Computer Cables

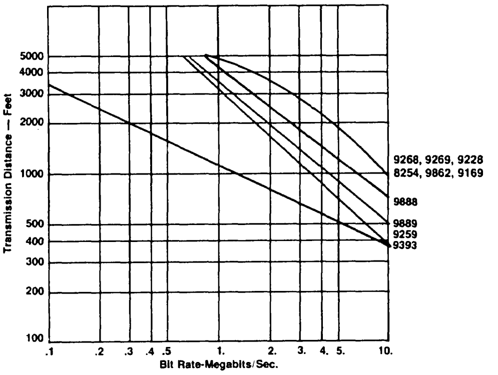
RISE TIME

Cables are terminated in their characteristic impedance. Signal source electrical characteristics: 50 ohms and 10% to 90% rise time less than 5 nanoseconds.

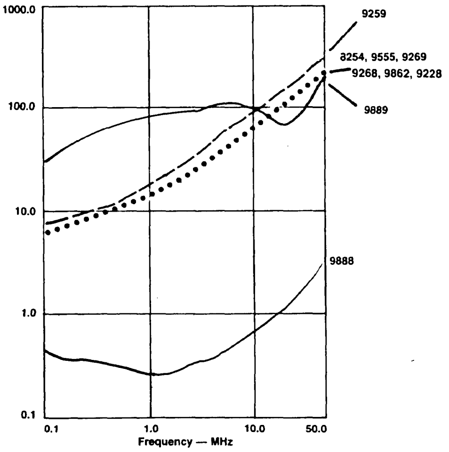


BIT RATE

Charts assume 5% peak to peak time jitter as determined by eye pattern measurements of pseudorandom NRZ code.



TRANSFER IMPEDANCE (Milliohms/Meter)



SINUSOIDAL FREQUENCY ATTENUATION CHART

Locate the line on the chart which represents the desired cable.
Locate the frequency on the bottom horizontal scale.
Read up to the desired line and then across to the vertical scale on the left to find attenuation figure for that frequency.

COMPUTER CABLES
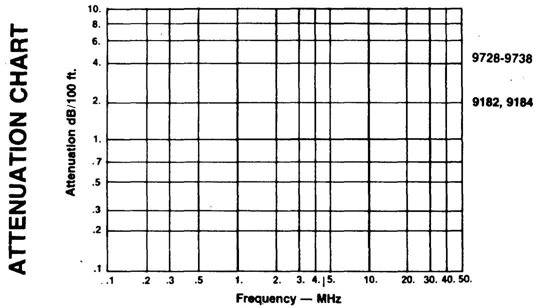
Datalene Insulated Cables

Datalene™ Insulated Cables MEETS EIA RS-422 TYPE REQUIREMENTS

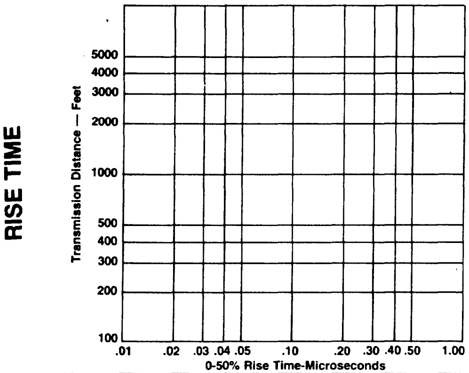
INDIVIDUALLY SHIELDED PAIRS

DATALENE — insulated line of shielded pair electronic cables are designed for precision computer and data communications applications. DATALENE insulation features are low dielectric constant, and a dissipation factor for high-speed, low-distortion data handling. Physical properties include good crush resistance and light weight.

6 dbv LENGTH LIMIT — DC LINE LOSSES
6 dbv limit is the cable length for which 50% of the DC input volume appears across the load if the cable is terminated in its characteristic impedance.



Cables are terminated in their characteristic impedance. Signal source electrical characteristics: 50 ohms and 10% to 90% rise time less than 5 nanoseconds.



Charts assume 5% peak to peak time jitter as determined by eye pattern measurements of pseudorandom NRZ code.

COOPER INDUSTRIES BELDEN

COMPUTER CABLES
Datalene Insulated Cables

DATALENE™ INSULATED MULTI-PAIR INDIVIDUAL AND OVERALL SHIELDED

24 GAGE
STRANDED CONDUCTORS (7 x 32) .61 mm diam.

PRODUCT DESCRIPTION: *Tinned copper, Datalene insulated twisted pairs. Each pair has 24 AWG stranded tinned copper drain wire. Overall BELDFOIL* aluminum polyester plus 65% tinned copper shield. Chrome PVC jacket. For color coding, please see chart 3, Technical Information Section.*

BREEZE-ILLINOIS, INCORPORATED
Designs and Manufactures
Interconnector assemblies
that are Shielded Against
EMI, EMP, RFI, Nuclear
Radiation, Compromising
Emanations (TEMPEST),
Mechanical Stressing,
Chemical Environments,
Weather and Temperature

Breeze-Illinois, Inc. has over 50 years experience in the manufacture of quality interconnection systems including design, development, manufacturing and evaluation for wide-ranging applications in industry, NASA, and the military. The company specializes in protected cable assemblies. These systems include all types of electrical and optical systems, pneumatic links and hybrid combinations. They are produced under the Breeze-Illinois trade names of:

- **Bi-LINK**™ Complete interconnector systems custom designed to fulfill the requirements of specific customer applications.
- **BiSHIELD**™ Cable assemblies designed to customer specifications or Breeze-Illinois standards to fulfill specific protection requirements.
- **Bi-PRO**™ Metallic and non-metallic flexible convoluted conduit wire-ways that protects transfer media against all outside influences.
- **Bi-OPTIC**™ Fiber optic interconnectors and hybrid systems using combinations of fiber optics and conventional transfer media.
- **Bi-TEST**™ Precision test cables specifically constructed to fulfill the rigid requirements of test environments.
- **Bi-SHELL**™ Backshell terminations and other hardware that pertains to the termination of protective wire coverings.

Interconnectors are our only product line. We offer quality components off-the-shelf or we can study your systems requirements and prepare trouble-free, reliable and efficient interconnections for you. We will prepare proposals, write reports, build prototypes and make complete test and evaluation studies.

So contact us for any interconnector need—large or small. Breeze-Illinois can save you money, space, weight and time and eliminate or avoid your interference and/or environmental protection problems too.

The name Breeze-Illinois is synonymous with wiring protection.

Our experience in manufacturing our own hardware such as coupling nuts, backshell assemblies, junction boxes, branches and connectors has established the name Breeze as the standard in the protected cable assembly field. We are highly competitive and best qualified to construct custom designed assemblies for our customers—from one assembly to thousands of copies. If you wish to assemble your own interconnectors, we manufacture individual components and can supply many off-the-shelf items for your interconnector needs. We also braid textiles such as Nylon and Dacron to wire bundles from your simplest design to your most complicated system.

We have a nationwide network of sales representatives anxious to serve you—Call or write us today.

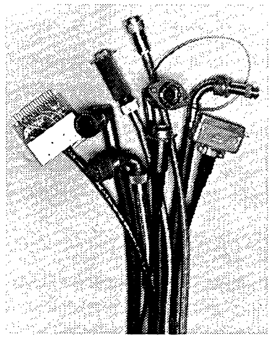
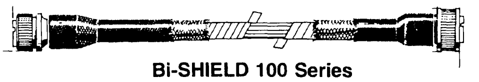
FOR PROTECTED *INTERCONNECTOR ASSEMBLIES*

Bi-SHIELD™ Cable Assemblies



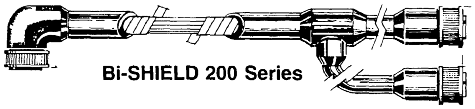
Custom Designed Interconnector Assemblies for Every Application

Breeze-Illinois' complete line of cable assemblies offer shielding, environmental and mechanical protection covering all applications. Custom designs and unique combinations are our specialty and are too numerous to list. Basic series configurations are shown below. Let us know your requirement. Our engineers will help design in the protection that is right for your system.



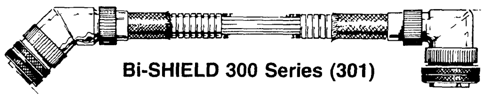
Bi-SHIELD 100 Series

For cost effective, light weight, service flexing applications.



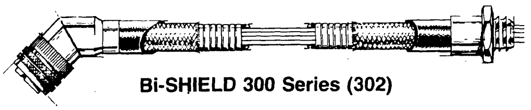
Bi-SHIELD 200 Series

Bi-SHIELD 200 series. Environmental protected cables through molded and blown on elastomer jackets or extruded jackets.



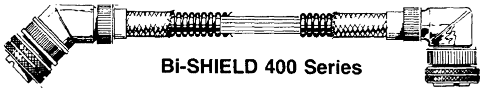
Bi-SHIELD 300 Series (301)

Repairable cables protected with Bi-PRO metallic convoluted conduit for high shielding levels



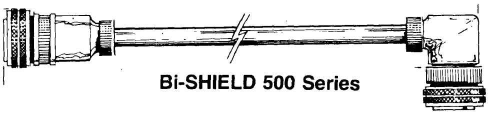
Bi-SHIELD 300 Series (302)

Cables protected with Bi-PRO metallic convoluted conduit for high shielding levels and environmental protection.



Bi-SHIELD 400 Series

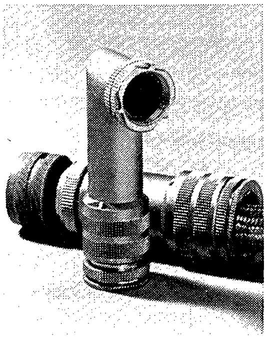
Repairable cables protected with Bi-PRO non-metallic conduit for good environmental protection.



Bi-SHIELD 500 Series

Cables constructed from commercial bulk cable and state of the art backshell adapters.

Bi-SHELL™ Cable Terminations



Superior Backshell Designs As Versatile as They are Varied

Pictured here is the unique field maintainable and repairable shielded backshell, the Bi-SHELL 60. It allows repeated assembly/disassembly with no degradation to its shielding capabilities or mechanical integrity. Breeze will design custom backshells for specific applications or problem situations. Call today for more information. We have service representatives close to you.

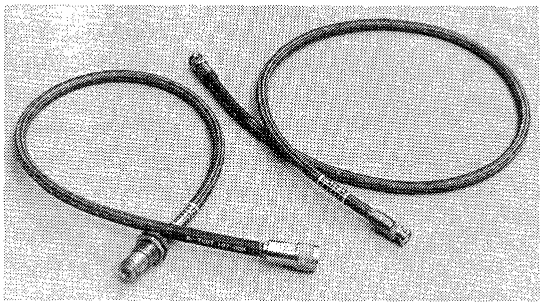
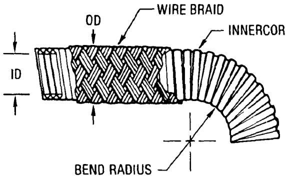
Flexible wire-ways constructed of metallic or non metallic convoluted conduit with a wire or fabric overbraid.



Bi-PRO

The Bi-PRO conduit variations illustrated on these pages cover the spectrum of mechanical and environmental protection, electromagnetic shielding effectiveness, and security against compromising emanations (TEMPEST).



Bi-PRO 175

Bi-PRO 175 is a hermetically sealed, shielded, flexible wire-way consisting of a convoluted brass innercore covered by a bronze braid. The innercore is constructed of a brass strip, helically convoluted and soldered at every other convolute. It forms a flexible, hermetically sealed tube that is capable of withstanding pressures in excess of 1000 psi. Bi-PRO 175 complies with MIL-C-13909 and has withstood tests of over a half million flexing cycles without failure.

Bi-PRO 223

Bi-Pro 223 is a hermetically sealed, shielded flexible wire-way consisting of a nickle-iron alloy convoluted innercore covered with a 300 series stainless steel braid in accordance with AMS 5689. The innercore, provides optimum permeability, stability and saturation resistance, with construction and dimensions in accordance with MIL-C-13909.

Bi-PRO 237

Bi-PRO 237 is a hermetically sealed, shielded flexible wire-way consisting of an 80% nickel, 20% iron alloy convoluted innercore covered with a 300 series stainless steel braid in accordance with MIL SPEC AMS5689. The innercore is annealed in a controlled atmosphere to provide permeability and shielding effectiveness exceeding performance specified under NAVSHIP specification 0967-283-5010.

Bi-PRO 242

Bi-PRO 242 is a hermetically sealed, shielded flexible wire-way consisting of a convoluted stainless steel innercore covered by a stainless steel braid in accordance with AMS5689. It combines high strength and flexibility with excellent corrosive resistance and high shielding capability. Construction is in accordance with MIL-C-13909.

Bi-PRO 001/101

Bi-PRO 001 is an all aluminum, non corrosive, flexible, convoluted conduit covered with an aluminum alloy wire braid. It features light weight and flexibility with a high level of crush resistance plus electromagnetic shielding capability against electric fields. Bi-PRO 001 is manufactured in accordance with MIL specs. AN-WW-C561, Type 1 and MIL-C-6136, Type 1.

Bi-PRO 198

Bi-PRO 198 is a flexible wire-way consisting of a helically convoluted and interlocked stainless steel innercore tube covered with a stainless steel braid. This extremely strong and durable interconnector protects against shock and impact, temperature up to 2000° F and has high corrosion resistance. It is manufactured dimensionally in accordance with Mil-C-6136.

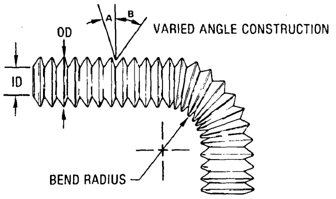
Bi-PRO 801 - Bi-PRO 811

Bi-PRO 801 is a high quality extruded flourcarbon TFE Teflon tube. It is completely seamless, hermetically sealed, and helically convoluted for extra strength and flexibility. The convolutes are slightly angled to provide a minimum bend radius.

Bi-PRO 811 is a high quality, helically convoluted and hermetically sealed flourocarbon tube of TFE Teflon covered with a stainless steel overbraid that provides protection and prevents elongation. Braid is stainless steel in accordance with mil spec AMS 5889.



Bi-PRO 807 - Bi-PRO 827

Bi-PRO 807 is an annularly corrugated and hermetically sealed flourocarbon tube of seamless FEP Teflon with no braid. It is extremely flexible and has excellent crush resistance due to its patented deep groove and varied angle corrugated configuration. The corrugations also give the tubing the ability to be compressed or extended to varying lengths thus providing well-fitting interconnections and easy installation in tight places.

Bi-PRO 827 encorporates the same annularly corrugated and seamless Teflon Tubing as 807 covered with a stainless steel overbraid for additional protection and strength. Braid is in accordance with MIL SPEC AMS5689.

BRIM **WIRE — CABLE — TUBING — HARDWARE**
ELECTRONICS, INC. FAIR LAWN, N.J. 201-796-2886

BRIM CHV CORONA RESISTANT HIGH VOLTAGE TEFLON* CABLE

BRIM CHV eliminates the need for bulky, thick insulation, as used with silicone rubber high voltage cables, and provides high temperature resistance not available with polyethylene insulated high voltage cables, plus the added benefit of retarding and detering corona discharges. Even under severe stress, including mechanical strain, moisture, corona or chemical, or high temperature conditions, there is no cracking of the insulation. Cable construction meets and exceeds MIL-W-16878D.

OPERATING VOLTAGE: Voltage capabilities are based on the thickness of the jacket.

OPERATING TEMPERATURE: −90°C to +250°C

DESCRIPTION: Silver plated copper conductor, per QQ-W-343, special corona retarding insulation, TFE tape wrap insulation, & a color coded jacket overall.

STD. COLORS: Red, White, Black, Green, Blue, Yellow, Orange, Brown, Purple, Gray. Stripped colors are also available.

STD. P-U: 250′, 500′, 1000′.

CONSTRUCTION VARIATIONS AVAILABLE TO ORDER.

BRIM HIGH TEMPERATURE LEAD WIRE

These small diameter high temperature lead wires allow unique constructions. The basic wire conforms to MIL-W-3861-stranded nickel plated copper; when shielded, nickel plated copper shielding is per MIL-N-46026A. Rated for 100 Volts RMS.*

Type 1: 800°F High Temperature Rating — Suitable for aircraft, or missile lead wire for operations between 500°F to 800°F. Cond. insulation: Fiberglass braid, impregnated with a silicone varnish, over a stranded nickel plated conductor.

Type 2: 1500°F High Temperature Rating — Suitable as a radiation resistant aircraft, or missile lead wire for operations between 800°F to 1500°F. Cond. insulation: Inorganic braid over a stranded nickel plated copper conductor.

Type 3: 2000°F High Temperature Rating — Suitable as a radiation resistant aircraft or missile lead wire for operations between 1500°F to 2000°F. Cond. Insulation: special formulated ceramic braid over a stranded nickel plated copper conductor, and a nickel plated braided shield overall.

* For dry locations.

TFE & FEP TEFLON SHIELDED CABLES • BRIMCROM • BRIMFLYX • STAINLESS STEEL TUBULAR BRAID

TEFLON IMPREGNATED BRAID OVER SHIELD PER MIL-W-16878

DESCRIPTION: One to five twisted conductors of Type E extruded TFE* insulation (.010″ wall), over a stranded silver plated copper conductor. If shielded, braided silver plated shield with a min. coverage of 90% over the conductor(s). When jacketed, either a fused double reversed TFE tape wrap jacket, a Teflon* impregnated fiberglass braided jacket, or an extruded FEP jacket. Cables are fungus, solvent, flame, acid, alkali, and oil resistant. Rated for 600 Volts. Stranding: 26 AWG — 7 strands, 24 AWG to 16 AWG — 19 strands. Color code: 1-White, 2-Black, 3-Red, 4-Green, 5-Yellow. Jacket color: White. OPER. TEMP.: TFE −65°C to +250°C. FEP: −65°C to +200°C.

BRIMCROM™

MICROMINIATURE TEFLON* HOOK-UP WIRE

Conductors are silver plated copper dip coated with TFE Teflon* insulation. Rated for 300 Volts, −90°C to +260°C. BRIMCROM is highly flexible, chemically inert, weather resistant, nonflammable. Suitable wherever high temperatures and lack of space are absolutely critical, such as aircraft, missiles, medical, and microminiaturized electronic components, and system designs. STD. P-U: 1000′

BRIMFLYX™ ULTRA-FLEXIBLE WIRE

DESCRIPTION: Soft bare copper conductor, insulated with a special flexible PVC formulation to minimize kinking & allow for ultra-low bending torque.

Designed for use where wires encounter continuous flexing, such as in data processing equipment, mercury thermostats, magnetic drums, and rotating servo platforms.

OPER. TEMP.: −40°C to +80°C

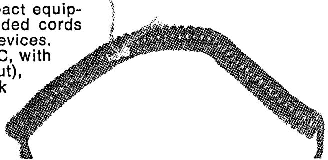
BRIM MINIATURE SHIELDED COMMUNICATION CORDS

1 FT. RETRACTED FOR 5 FT., EXTENDED



Miniature in size. Suitable for compact equipment, such as FCC* required shielded cords for computers or other interfaced devices. All conductors are 28 AWG 19/40 TC, with an aluminum mylar foil shield (foil out), a spiral TC shield, & then a Black Byron VW-1 vinyl jacket overall. 18″ & 2″ straight ends, cut blunt. Long lasting.
OPER. TEMP.: −20° to +60°C

BRIM No.	Cord Length	No. of Cond.	AWG	Cond. Strand.	Coil O.D.	Cord O.D.

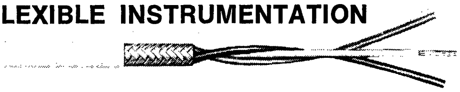
BRIM MINIFLYX™ SUBMINIATURE ULTRA-FLEXIBLE INSTRUMENTATION CABLES



DESCRIPTION: Ultra-flexible stranded bare copper conductors, .005″ wall of soft flexible PVC, braided shield, White .010″ soft flexible PVC jacket overall. Suitable as an instrumentation cable where Ultra-flexibility & subminiaturization are essential, in low voltage applications. For example: biomedical instruments, missiles, computer, miniature relays, disc drives, servo systems, recorders.
OPERATING TEMPERATURE: −40°C to +90°C.
OPERATING VOLTAGE: 200 Volts.

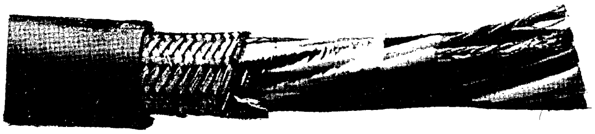
HEAVY DUTY SHIELDED CONTROL CABLES MIL-W-16878D TYPE C-18 1000V



DESCRIPTION: MIL-W-16878D Ty C-18, 19/30 TC conductors, twisted, mylar wrap braided tinned copper shield — 90% minimum coverage — chrome PVC jacket overall. Color coded. Cable resistant to acids, oils, moisture, solvents, alkalis, fungus. Cable meets UL VW-1 vertical flame test requirements. OPERATING VOLTAGE: 1000V. OPERATING TEMPERATURE: −55°C to +105°C. Suitable as an interconnecting cable for electronic equipment, instrumentation, control, telemetry data, and remote control of sensitive recording instruments. STD. P-U: 500′, 1000′.

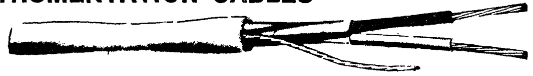
ALUMINUM MYLAR FOIL SHIELDED CABLES

ALUMINUM MYLAR FOIL SHIELDED CABLE — INSTRUMENTATION CABLES



DESCRIPTION: Stranded TC conductors, polyethylene insulation, conductors twisted, an aluminum mylar foil shield, foil out, TC drain wire, gray PVC jacket overall. Color coded. Suitable as a light weight shielded instrumentation cable. Shield provides 100% coverage, and drain wire provides quick and easy grounding. OPERATING VOLTAGE: 400V.
OPERATING TEMPERATURE: −20°C to +60°C.
COLOR CODE 1-Black, 2-Red, 3-White, 4-Green.

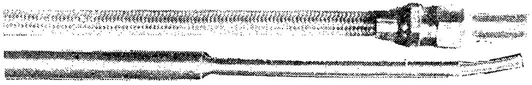
BRIM WIRE — CABLE — TUBING — HARDWARE ELECTRONICS, INC. FAIR LAWN, N.J. 201-796-2886

HEAT SHRINKABLE TUBINGS: BRIFLON™ TEFLON • TEFZEL – SILICONE RUBBER TUBING

SH200, SH250, SH254 & SHTF tubings have excellent resistance to weathering, chemicals (oils, fuels, solvents, acids, alkalis, fluids), & fungus, are non-corrosive, low water absorption (.01%), will not burn nor support combustion, have hi dielectric strength (850V/MIL dry), low dielectric constant, & a very low coefficient of friction. Hi mechanical strength yet flexible. (Low temp. flexibility −67°C). Their excellent electrical characteristics remain stable throughout their electrical range. Longitudinal change with full shrinkage: FEP −15%: TFE −20%. Color: Natural (FEP-transparent; TFE-translucent).



SH200 (FEP) MIL-I-23053/11

SH200: an extruded modified FEP (Fluorinated-Ethylene-Propylene) Teflon* tubing, with a continuous Oper. Temp. of +205°C (400°F). SH200 completely shrinks at 350°F (partial shrinkage possible at 200°F). Shrinkage ratio — 1.3:1. It melts at 525-563°F so it can be used to encapsulate. Now many sensitive components, parts, devices, etc. can be protected with Teflon*. Fills void between the hi temp. of TFE, and low temp. of PVC and polyolefin tubings.

** All dimensions are based on full recovery.

OTHER SIZES IN TFE AND FEP, AND COLORS ARE AVAILABLE TO ORDER. ETCHING FOR BONDING IS AVAILABLE TO ORDER.

SH254 4:1 SHRINKABLE TFE

SH254 tubing can recover to approximately 1/4 of its expanded size when heated to its "gel" point (621°F-625°F). Because of its exceptional shrinkage capability, its recommended that the outside diameter of the object to be shrunk down upon should not be more than 50% of the expanded I.D. of the size of the tubing used. Conforms to AMS 3584 and MIL-I-23053/12 — except for its 4:1 shrink ratio. SH254 is non-flamable, non-corrosive, and offers all of the other outstanding electrical, chemical, and mechanical properties of Teflon*. * DuPont

SHTF SHRINKABLE TFE/FEP

SHTF is made with a combination of TFE and FEP Teflons*. The inner wall is made of FEP and the outer wall of TFE. When the tubing is heated, the TFE begins to shrink down tightly over the FEP. The FEP inner wall melts and flows-squeezes-into and around the item covered, creating a solid or near solid encapsulation. The fit is so tight that it is safe against most environmental hazards, involving pull or vibrations. It can be used as a strain relief, or moisture-proof covering for wires, connectors, terminals, splices, electronic devices, etc. SHTF is non-flamable, non-corrosive, and offers all of the other outstanding electrical, chemical, and mechanical properties of Teflon*. Color: Natural (Transparent). OPERATING TEMPERATURE: −85°F to +450°F.

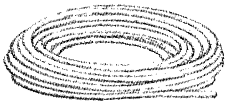
BRIMFLEX BSR SILICONE RUBBER TUBING — MIL-R-5847 200°C



BRIMFLEX BSR Silicone Rubber tubing is an extremely elastic and stable high temperature and low temperature tubing. Besides being extremely flexible, it has excellent mechanical strength (tear resistance, tensile strength, elongation, and weather resistance), and outstanding dielectric strength, and corona resistance. BSR meets MIL-R-5847 and Fed. Spec. ZZ-R-765, Class 2b, STD. COLOR: WHITE. OPERATING VOLTAGE: 28 AWG-5/8″ — 300V, 3/4″-1″ — 600V.

SHRINKABLE E-TFE TEFZEL* TUBING — MIL-I-23053/14

Designed for ruggedness. Excellent chemical resistance and high dielectric qualities which exist over a wide temperature range. Superior to Teflon* in its mechanical strength. Shrink Ratio-1.5:1. Shrinks quickly on application of only 300°F (150°C). Because of its quick shrinking ability at a relatively low temperature, many heat sensitive components and materials (solder joints, plastics, wood, metal) can now be easily protected. It is also heat sealable, chemically inert, self-extinguishing (non-flamable in air). Dielectric Strength: 400V/MIL. Uses: cable jacketing, wire markers, terminal covers, temperature probes, immersion tubing, heat exchanger coils, sight glasses, roll covers, chafe guards, component insulation. STD. COLOR: Translucent.

BRIMFLEX™ SHRINKABLE TUBINGS — SPIRAL WRAP TUBINGS
BRIFLEX™ SHRINKABLE PVC TUBINGS: MIL-I-23053/2B & HEAVY WALL PVC TUBING
SHRINKABLE IRRADIATED POLYOLEFIN: MIL-I-23053/5 — SPIRAL WRAP TUBING

BRIMFLEX™ POLYVINYLCHLORIDE SHRINKABLE TUBING — MIL-I-23053/2B & UL VW-1

SHRINK RATIO: 2:1 (50%) — OPERATING TEMPERATURE: −20°C to +105°C
BRIMFLEX™ SH105 is a flexible all purpose shrinkable PVC tubing that shrinks 50% of its expanded size when exposed to temperatures below 200°F (within one minute). SH105 meets MIL-I-23053/2B, Class 2, and conforms to MIL-I-631D, Grade C. Longitudinal shrinkage: approximately 20%. SH105 is self-extinguishing, resistant to fungus, most oils, and chemicals, sunlight, moisture, and is non-corrosive. SH105 is suitable for insulating wires, cables, and electronic components, that vary in shapes, and dimensions. Produces a smooth snug flexible fit, in most applications — even around sharp bends. Dielectric Strength: 700V/MIL min., ASTM-D922. Tensile Strength: 2000PSI min. Suggested Storage Temperature: under 70°F for up to 10 months. UL Approved SH105 is available to order.
STD. COLORS: Black, Clear, Red, White. Other colors available to order.

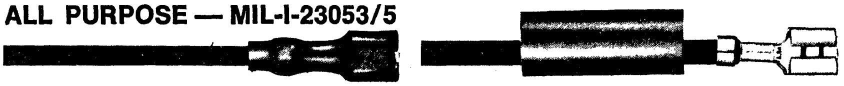
SHRINKABLE IRRADIATED POLYOLEFIN TUBING — ALL PURPOSE — MIL-I-23053/5



Flexible, yet greater electrical, chemical, and abrasion resistance, and greater mechanical strength than that of shrinkable PVC tubing. It not only insulates, it can also encapsulate, giving a watertight fit. Won't crack or peel. Its non-corrosive, has excellent resistance to soldering irons, oils, solvents, acids, alkalis, fuels, hydraulic fluids, fungus. Shrink Ratio-2:1 (50%). Shrinks when exposed to 250°F. Longitudinal shrinkage: 5%. Dielectric Strength: 1300V/MIL. Colored tubing is self-extinguishing; clear tubing is slow burning. Uses: Strain relief, jacketing material, component insulation. OPERATING TEMPERATURE: −55°C to +135°C. Meets MIL-I-23053/5, Class 1, 2. MIL-I-7444B, AMS 3636B, AMS 3637A, ASTM D876, ASTM D150, ASTM D257, ASTM D2671, ASTM D792.

SPIRAL WRAP TUBINGS FOR HARNESSING

Easily twists on and off. Can be repeatedly flexed without cracking or breaking. Expandable. Holds wire, and cable bundles securely, and allows leadoffs or additions at any point. Bends around sharp corners, and protection against sharp edges. Available in 4 types of insulations: Polyethylene, Rulan (a flame retardent type of polyethylene), Nylon, Teflon. All are resistant to organic solvents, alkalis, and acids (nylon satisfactory except for strong acids). OSHA and UL approved for harnessing cables.

BLACK NYLON AND POLYETHYLENE SPIRAL WRAP FOR ULTRAVIOLET RAY PROTECTION IS AVAILABLE.

LOW & HI TEMP. PVC TUBING PER MIL-I-631 & MIL-I-7444 STOCKED.

SHRINK RATIO: 2:1 (50%) — OPERATING TEMPERATURE: −20°C to +105°C
SH110 meets or exceeds the performance requirements of MIL-I-23053/2B, Class 2 but for its dimensions — its heavier wall. SH110 is a Heavy Wall Shrinkable PVC tubing, yet its flexible, and will shrink at temperatures below 200°F (within one minute). Provides outstanding dielectric and mechanical protection without damage to enclosed or adjacent components, even around sharp bends. Longitudinal shrinkage: approximately 20%. SH110 is self-extinguishing, resistant to fungus, moisture, sunlight, and most oils, and chemicals. Dielectric Strength: 600V/MIL min,. ASTM-D922. Suitable as a heavy duty all-purpose shrinkable tubing that is less expensive, almost as flexible, and has a higher temperature ability than that of Shrinkable Neoprene tubing. Suggested Storage Temperature: Under 70°F for up to 10 months.

SEMI-RIGID POLYOLEFIN SHRINKABLE TUBING IS AVAILABLE TO ORDER.
CUT AND PRINTED WIRE MARKERS ARE AVAILABLE TO ORDER.

A — Capacitance between conductors.
B — Capacitance between 1 conductor and other conductors connected to shield.

AUDIO CABLE/SPIRAL SHIELDED PVC JACKET

Stock Color: Chrome gray jacket. **Construction:** Tinned copper conductor, color-coded PVC insulation, 85% tinned copper spiral wrapped shield, PVC jacket overall, −20°C to +80°C. Entire cable passes VW-1 Vertical Flame Test, UL listed 2095, 300 volt rated. **Applications:** Cable for recording studios, radio transmitters, sound systems and electronic circuits where shielding is required. Spiral shield allows ease of pigtail soldering. **Packaging:** 100′, 500′ and 1000′ spools.

CAROL CAROL CABLE COMPANY, INC. / ELECTRONIC CABLES DIVISION AUDIO & COMMUNICATIONS CABLE

AUDIO CABLE MYLAR*/ ALUMINUM FOIL SHIELDED PVC JACKET

Stock Color: Chrome gray jacket. **Construction:** Tinned copper conductors, color-coded polyethylene insulation, wrapped with 100% Flexfoil® mylar supported aluminum foil shield with foil facing outside, stranded tinned copper drain wire, PVC jacket overall, −20°C to +60°C. Jacket only passes VW-1 Vertical Flame Test, UL listed. For description of Flexfoil® see technical data. **Applications:** 100% shielded cable for recording studios, broadcast sound systems and electronic circuits where RF shielding is required. **Packaging:** 100′, 500′ and 1000′ spools.

AUDIO/DATA INDIVIDUALLY SHIELDED MULTIPLE PAIR CABLE/PVC JACKET

Stock Color: Chrome gray jacket. **Construction:** Tinned copper conductors, color-coded polypropylene, 60°C insulation cabled in pairs, 100% Flexfoil® aluminum/foil polyester shield over each pair with a common stranded tinned copper drain wire under the shield, PVC jacket overall, −20°C to +60°C. Suggested working voltage, 22-18 gauges, 300 volts. 22 gauge and 20 gauge series — 22 gauge drain wire. 18 gauge series — 20 gauge drain wire. Jacket only passes VW-1 Vertical Flame Test, UL listed AWM style 2493. **Applications:** For audio RF and pulse applications requiring superior circuit isolation. The use of polypropylene insulation results in excellent high frequency properties and mechanical durability. Packaging: 100′, 500′ and 1000′ spools.

SEE COLOR CODE CHART ON PAGE 4

Stock Color: Chrome gray jacket. **Construction:** Solid tinned copper conductors, color-coded PVC insulation cables in pairs, 100% Flexfoil® aluminum/foil polyester shield over each pair with a common solid tinned drain wire under the shield, PVC jacket overall, −20°C to +80°C. Entire cable passes VW-1 Vertical Flame Test. UL listed AWM style 2464, 300 volt rated. **Applications:** For audio RF and pulse applications requiring superior circuit isolation. **Packaging:** 100′, 500′ and 1000′ spools.

CAROL CAROL CABLE COMPANY, INC. / ELECTRONIC CABLES DIVISION
AUDIO & COMMUNICATIONS CABLE

AUDIO CABLE/UNSHIELDED PAIRED MULTICONDUCTOR PVC JACKET

Stock Color: Chrome gray jacket. **Construction:** Tinned copper conductors solid and stranded, color-coded PVC insulation, conductors cabled and paired with a short lay twist for conductor balance providing a circuit free from cross talk, PVC jacket overall, −20°C to +80°C. Entire cable passes VW-1 Vertical Flame Test. UL listed AWM style 2464. 300 volt rated. **Applications:** Heavy-duty intercom and audio cable for intercom systems, signal systems, annunciators, nurse's call systems, multiple speaker systems, control circuit cables. **Packaging:** 500′ and 1000′ spools.

INSTRUMENTATION & CONTROL CABLE

CONTROL CABLE MULTI-CONDUCTOR/SHIELDED PVC JACKET

Stock Color: Chrome gray jacket. **Construction:** Tinned copper conductors, color-coded polyethylene insulation, fillers where required, clear mylar wrap, 80% tinned copper braid shield, PVC jacket overall, −20°C to +60°C, jacket only passes VW-1 Vertical Flame Test. UL listed AWM style 2094. 300 volt rated. **Applications:** Low capacity cable for control circuits, video and audio interconnecting cables, broadcast and studio use. Precision engineered to prevent cross-talk and eliminate hum pick-up. Low capacitance, light weight. **Packaging:** 100′, 500′ and 1000′ spools.

* The inner conductors only are rated UL at 300 volts.

UNSHIELDED PAIRED MULTI-CONDUCTOR/PVC JACKET

Stock Color: Chrome gray jacket. **Construction:** Tinned copper conductors, semi-rigid PVC insulation UL style 1061, CSA type SR-PVC, clear mylar wrap, PVC jacket overall, −20°C to +80°C. Entire cable passes VW-1 Vertical Flame Test. UL listed AWM style 2343. 300 volt rated.* **Applications:** For use in data transmission, control circuits and signal application in computers and industrial equipment. **Packaging:** 100′, 500′ and 1000′ spools.

SHIELDED/MULTI-CONDUCTOR PVC JACKET

Stock Color: Chrome gray jacket. **Construction:** Stranded tinned copper conductors, color coded semi-rigid PVC insulation UL style 1061, CSA Type semi-rigid PVC, conductors cabled under 100% Flexfoil®/Polyester shield, 65% tinned copper braid shield over entire assembly, PVC jacket overall. UL listed AWM style 2464 CSA Certified to 80°C. 300 volts. **Applications:** For use in data transmission, control circuits and signal applications in computers and industrial equipment. **Packaging:** 100′, 500′ and 1000′ spools.

SHIELDED/MULTIPLE PAIR CABLE/PVC JACKET

Stock Color: Chrome gray jacket. **Construction:** Tinned copper conductors, color-coded Polypropylene insulation, cabled in pairs, 100% Flexfoil® aluminum foil/Polyester shield, 90% tinned copper braid shield over entire assembly, PVC jacket overall, −20°C to +60°C. UL listed AWM style 2960. **Applications:** For audio RF and pulse applications requiring superior circuit isolation. Also suitabe for RS-422 type applications. The use of Polypropylene insulation results in excellent high frequency properties and mechanical durability. **Packaging:** 500′ and 1000′ spools.

Stock Color: Chrome gray jacket. **Construction:** Tinned copper conductors, solid Polyethylene insulation, cabled in pairs, 100% Flexfoil® aluminum foil/Polyester shield, 90% tinned copper braid shield over entire assembly, PVC jacket overall, −20°C to +60°C. UL listed AWM style 2448. **Applications:** For radio, pulse or RF signal transmission. Computer and computer peripheral equipment interconnection where high levels of noise are anticipated. Also suitable for RS-422 type applications. **Packaging:** 500′ and 1000′ spools.

LO-CAP® INDIVIDUALLY SHIELDED MULTIPLE PAIR CABLE/PVC JACKET

Stock Color: Chrome gray jacket. **Construction:** Tinned copper conductors, color-coded foamed Polypropylene LoCap® insulation, each pair shielded with 100% Flexfoil® Aluminum/Polyester shield with a common 24 stranded tinned copper drain wire under the shield, PVC jacket overall, −20°C to +60°C, UL listed AWM style 2493, 300 volt rated. **Applications:** For computer and pulse applications requiring superior circuit isolation, as well as a low dielectric constant. The use of Polypropylene insulation results in excellent high frequency properties and mechanical durability. **Packaging:** 500′ and 1000′ spools.

TECHNICAL DATA

FLEXFOIL® Laminated aluminum foil/polyester shielding material. Provides 100% shielding, easy termination and reduced cable diameter. Unique construction eliminates metal to metal contact, providing isolation between adjacent shields in a cable assembly. Polyester film provides extra insulation and mechanical strength.

FLEXLIFE® Specially formulated jacketing material provides outstanding high gloss appearance, remarkable flexibility and long life.

PERMAFOAM® Transmission cables utilizing low loss foam polyethylene dielectrics and permaline jackets for extra long life.

PERMALINE® High molecular weight polyethylene jacketing material which contains a small percentage of carbon black. Non-contaminating, high resistance to weather, salt air, chemical fumes, fungus and acids. Permaline has excellent moisture resistance, allowing it to be used in direct burial installations.

SUPERFLEX® RG type cables having foam polyethylene dielectric which provide low loss. Flexlife jackets give the cable outstanding appearance, flex and long life.

CAROL CAROL CABLE COMPANY, INC. / ELECTRONIC CABLES DIVISION

COAXIAL CABLE

FULL POWER® TV, MATV AND CB TRANSMISSION LINE CABLE

The Full Power® line of coaxial cable consists of a variety of commercial type cables suitable for many CB and television applications. Full Power® cables provide good performance at low cost.

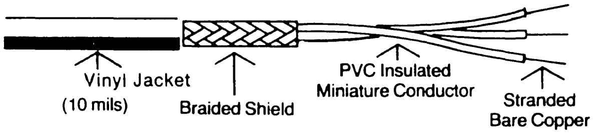
ULTRA FLEXIBLE MICROMINIATURE



DESCRIPTION:

Conductors are ultra flexible, bunched bare copper strands insulated with 5 mil walls of color coded 90°C Polyvinylchloride. Extra flexible braided shields, jackets or both can be applied over the cabled conductors.

APPLICATIONS:

Phonograph tone arms, miniature relays, biomedical instruments, computers and other specialized applications requiring 200 volt, 90°C ultra flexible microminiature multiconductor cables.

BRAIDED COPPER CABLES

Tubular Constructions
Silver-Plated Copper Wire Shielding Braids

Manufactured to QQB-575A standards with the exception that 40 micro inches of Silver Plating has been substituted for the regular Tin Plating. This substitution is necessary when the shielding is to be subjected to temperatures exceeding 200°C, of if special corrosion resistance is required.

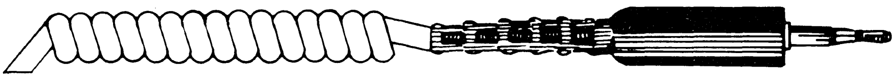
CABLE ASSEMBLIES & MOLDED ASSEMBLIES

Coiled Coil Assemblies

Coiled Cords from Cooner Wire are manufactured to customer specifications and assembled with or without molded backshells and strain reliefs.



Electronic Cable Assemblies

Cooner Wire Company manufactures cable assemblies to customer specifications from standard or special components. At Cooner Wire Company, we have endeavored to make available to our customers, assemblies processed to more closely meet their needs; than those otherwise available. We are able to meet standard needs, or fabricate assemblies and molded assemblies that incorporate the use of our highly specialized wire and cables. Molded assemblies available in most melt extrudable compounds as well as thermosettings such as Silicone Rubber.

Call us for your special military, computer, medical assembly requirements.

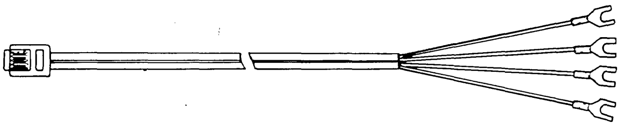
MODULAR TELEPHONE CORDS

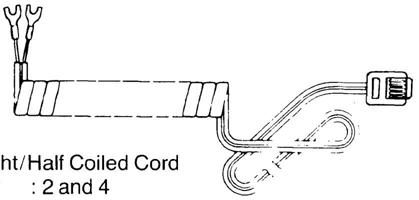
Cord offers a complete combination of modular telephone cord colors, terminations and designs. We also welcome the opportunity to work with you on modifications in developing cord assemblies to your specification.

All products are manufactured to FCC requirements under the license of Western Electric. Modern manufacturing automation and technique assures a high quality and uniformly made product. Each production lot undergoes a MIL-STD-105D single sample inspection at General inspection level II, AQL 1.0% for performance and 1.25% for appearance.

If you are looking for a professional supplier with consistency, economy and reliability, call us.

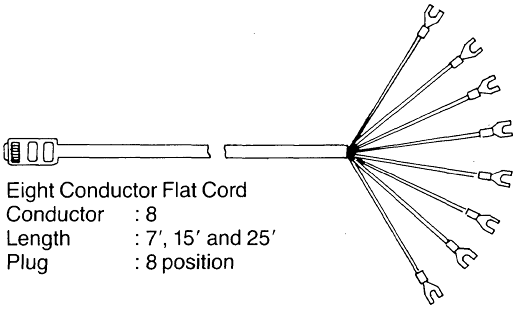


TCO Modular Line Cord
Conductor : 2, 4, and 6
Length : 7′, 15′ and 25′
Plug : 6 position



TC10 Half Straight/Half Coiled Cord
Conductor : 2 and 4
Length : 14′
Plug : 6 position

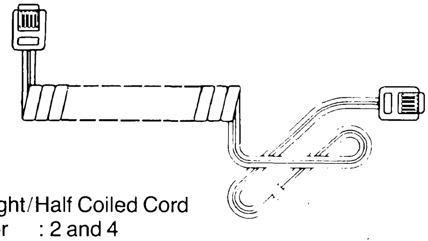
TC01 Modular Extension Cord
Conductor : 2, 4, and 6
Length : 7′, 15′ and 25′
Plug : 6 position



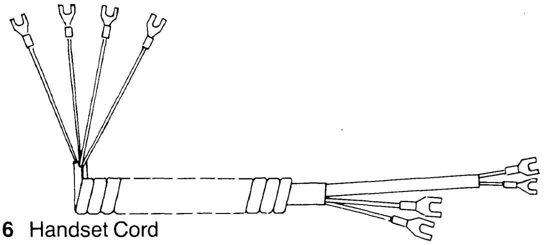
TC14 Eight Conductor Flat Cord
Conductor : 8
Length : 7′, 15′ and 25′
Plug : 8 position

TC8 Modular Handset Cord
Conductor : 4
Length : 7′, 15′ and 25′
Plug : 4 position

TC15 Conductor Flat Cord
Conductor : 8
Length : 7′, 15′ and 25′
Plug : 8 position



TC9 Half Straight/Half Coiled Cord
Conductor : 2 and 4
Length : 14′
Plug : 6 position



TC16 Handset Cord
Conductor : 4
Length : 7′, 15′ and 25′

ALSO AVAILABLE–

Cord offers a complete line of Modular Jack Connectors for 2, 4, 6 and 8 wire connections.

DABURN

SHRINKABLE IRRADIATED POLYOLEFIN TUBING

This series is designed for maximum mechanical strength at stress or points of connection. It is strong, abrasion resistant and is supplied in expanded sizes. It insulates, jackets, splices, encapsulates, weatherproofs components, connectors, cables and irregular shaped objects. When exposed to heat (275°F) the tubing shrinks 50% in diameter, 5% longitudinal contraction. Controlled shrinkage to exact requirement takes place. SH275 meets or exceeds MIL-1-23053B/5 Class 1 and 2. SH290 meets or exceeds MIL-I-23053/6 available with UL approval. UL File No. E-51336. AMS 3636B; 3637A.

SPECIFICATIONS —

All Tests Made on Tubing in Recovered Dimension

Continuous Operating Temp: 135°C	Shrinkage Ratio: 2:1 (50%)
Longitudinal Change: 5% Max.	Dielectric Strength: 500 V/MIL Min.
Tensile Strength: 1500 PSI Min.	Dielectric Constant: 2.87 Max.
Ultimate Elongation: 200% Min.	Corrosive Resistance: Non-Corrosive
Special Gravity: 1.29 Max.	Resistance to Soldering Iron: Excellent
Low Temp. Flexibility (−54°C): No Cracking	Fuel, Oil, Solvent, Acid, Alkali, Hydraulic Fluid Resistance: Excellent

STOCK COLORS: Black, White, Red, Clear. Additional colors available. Although processed by hi-energy radiation the **Daflex SH275** and **SH290** shrinkable tubings **do not** at any time become radioactive or possess any residual radioactivity.

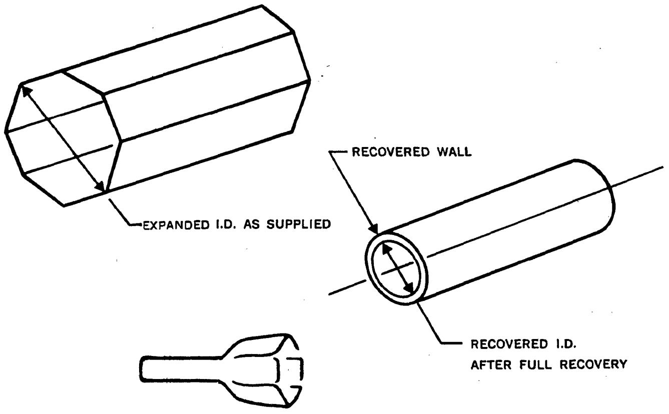
* Wall thickness will be less if recovery is restricted.

** 4′ lengths.

† STOCK: Black 4′ lengths. Colors avail.

†† Also stocked: 4′, ½″, 1″, and 6″ lengths.

NEW! 4:1 SHRINKABLE POLYOLEFIN TUBING



DAFLEX SH277 shrinkable irradiated polyolefin tubing recovers to 25% of its supplied size when full recovery is permitted. Material will shrink with the application of 120°C (250°F); is rated for continuous operation from −55°C to 135°C and will withstand up to 300°C (572°F) for short durations.

SH277 is flame retardant and meets or exceeds the specified properties of MIL-I-23053/5 Class 1 and 3. Its longitudinal shrinkage is a maximum of 10%. **DAFLEX SH277** can be hot stamped.

Typical applications are where tubing must fit over a large object such as the repair or replacement of cable jacketing.

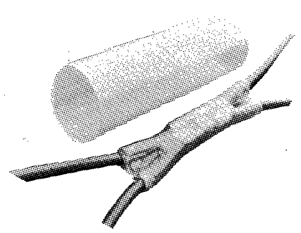
NEW! DAFLEX SHRINK/MELT IRRADIATED POLYOLEFIN TUBING Ⓤⓛ



Daburn's dual wall polyolefin heat shrinkable tubing is designed to provide a tight moisture proof encapsulating seal. When 115°C is applied, the inner wall melts and flows, as the outer wall shrinks; forcing the melting wall to fill voids and interstices and to encapsulate what is covered. The result is a semi-rigid mass.

Daflex SM270 series is ideal for covering splices, cable junctions and as a shield for coarse surfaces. SM270 is flame retardant. It resists oil, hydraulic fluids, acids and alkalis.

It meets or exceeds MIL-I-23053/4, is UL approved VW-1 for 105°C.

STANDARD COLOR: Black. Clear (not flame retardant) available to order.

STANDARD LENGTH: 100′, 1000′, in 4′ lengths, additional lengths to order.

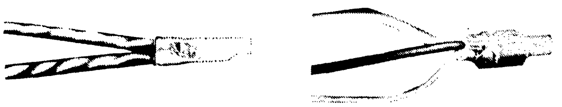
Dielectric Strength, Min.: 500 V/MIL
Dielectric Constant, Max.: 3.1

DABURN

DUAL-WALL TEFLON* ENCAPSULATING SHRINKABLE TUBING



NEW DAFLON SM450 is a new dual wall shrink and melt Teflon tubing which gives a tight, moisture-proof seal. It is made from two types of Teflon. The outer wall is TFE Teflon and the inner lining is FEP Teflon. When heated to 400°F the FEP melts and at 621°F the TFE shrinks tightly. The FEP is squeezed into a solid or near solid mechanical encapsulation. DAFLON SM450 tubing protects against most environmental hazards involving pull, vibration, moisture, chemicals, etc. It may be used over wires, terminals, splices, connectors and as a strain relief and end cap. VW-1.

Operating Temperature: 450°F.

STANDARD PACKAGE: 100′ in 1 to 3 ft. lengths. Special lengths available to order. ** Will fully close off.

DAFLON SHRINK SH-400 (FEP)

Made with Modified TEFLON‡ FEP will shrink over inserted objects upon exposure to moderate heat. Heretofore, many joints, parts, components, devices could not be protected because of hi temperature required for shrinkage. FEP TEFLON‡, which has a continuous service temperature of 400°F, will shrink at 300°F. Supplied in natural (transparent) color. Complete shrinkage at 350°F. Now, many heat sensitive products can use the permanent protection of TEFLON.* Will not burn or support flame, long lengths available. Will not split or melt. Extruded. Meets MIL-I-23053/11. VW-1.

DAFLON 4:1 SHRINKABLE PTFE TUBING

DAFLON SH421 Shrinkable Teflon Tubing recovers to approximately 25% of its expanded size when heated to the gel point (621°F). Thus it is now possible to use shrinkable Teflon tubing, with its excellent chemical and physical properties, over objects which require more than the standard 2:1 shrinkdown ratio (see SH621).

NOTE: Tubing should be allowed to recover **at least 50%.** Conforms to MIL-I-23053/12 and AMS-3584. **Operating Temp.:** −85°F to +500°C. VW-1.

TUBULAR BRAID PER MIL SPEC QQ-B-575

Tinned copper shielded braid mf'd completely round per Mil Spec QQ-B-575. Maintains its round configuration. Shielding coverage is 95% or more. Used in military applications where maximum shielding is required against electrostatic interference. Useful against mechanical abrasion and stresses for cables — as grounding cable.

STANDARD SPOOL PUT-UP: 50 Ft., 100 Ft., 250 Ft. Larger Spools Available — Advise.

* Values based on copper in free air at 65°F and intended as a guide only.

† These sizes are mfg. to standards of QQ-B-575 although they are not listed in the specification.

Additional constructions and variations made to order. Also available in **silver plated copper**, bare copper, stainless steel, and nickel plated copper.

TINNED COPPER SHIELDING — FLAT BRAID

Soft annealed tinned copper woven braid, rolled flat at time of manufacture. It is extremely flexible. Used as battery grounding, bonding strap for aircraft, vehicles, marine equipment. Eliminates ignition interference and moving parts. Slides over wire and cables.

NEW! CONTROLLED IMPEDANCE FLAT RIBBON CABLE

UL STYLE 2651 — 105°C — 300 VOLTS — VW-1

DESCRIPTION: Each conductor is 28 AWG, 7 strand of 36 AWG T.C. with .010″ nominal wall of extruded PVC insulation overall. Conductors are to provide .050″ ±.002″, center to center conductor spacing allowing for nominal impedance of 105 Ohms (measured ground-signal-ground). Cables are listed under UL style 2651 and meet UL VW-1 flame test. Conductors separate cleanly and one has a red stripe for polarity. Because of controlled center to center spacing, cables may be mass terminated with insulation displacement connectors designed for .050″ spacing of conductors. Crosstalk is also controllable.

MODULAR PLUG CABLES

Each Daburn modular cord is #28 AWG 7/36 soft tinned copper, color coded, and an overall PVC jacket, modular plugs at each end. Shielded constructions use an overall aluminum/polyester shield and drain wire. Standard constructions use flat cable. Round cable is available to order.

Daburn modular cords are suitable for data equipment, interface, keyboards, audio, telephone handsets, security & alarm applications.

They resist oils, grease, acids, fumes and are abrasion resistant. They will not mar other surfaces with which they come in contact.

Note: "Half-modular" cords — lugs on one end and keyed plugs are available to order. Specify — cross wired or straight wired.

RETRACTILE POWER & COMMUNICATION CORDS—Ⓤⓛ & CSA

Long Lasting Service—useful wherever cords much change length or position. Extend to approximately five times its retracted length. Returns to its original shape or length when released. Eliminates tangling, twisting or knots. Cords are UL and CSA approved.

POWER CORDS

RETRACTED LENGTHS: 1, 2, 3 & 4 FT. EXTENDED LENGTHS: 5, 10, 15 & 20 FT.

UL LISTED—NEOPRENE JACKETED CORD

Operating Temperature: −20°C to +60°C

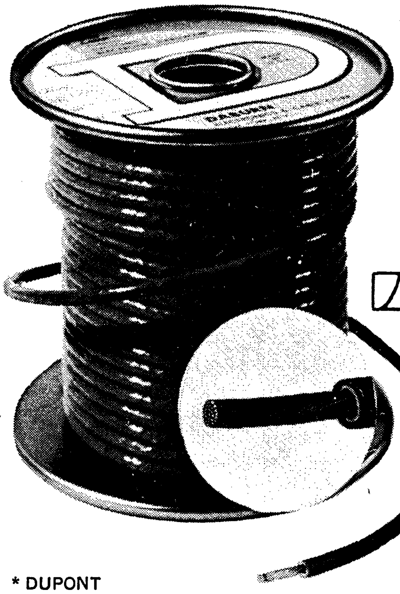
DABURN

HI-VOLT CORONA RESISTANT TEFLON* CABLE©



Voltage Rating at Sea Level—
Voltage Rating at 80,000 feet, approximately ⅓ lower—
Minimum life expectancy: 10,000 hours

* DUPONT

SMALL SIZE: You do not need bulky, thick, insulation jacketing as used with silicone rubber and polyethylene insulations to get your hi-voltage requirements. Wire used is MIL-SPEC QQ-W-343 and MIL-W-16878. Insulation used conforms to and surpasses MIL-SPEC-W-16878.

AVOID CORONA PROBLEMS: Corona Resistant Teflon construction is specifically designed to retard and prevent corona penetration.

Temperature variations from −60°C to +250°C have no life effect on the corona resistant Teflon. In addition, there is no stress or crack failure under severe, adverse conditions including mechanical strain, moisture, corona or chemical conditions.

DESCRIPTION: Single Conductor, Stranded Silver Plated Copper, Corona Resistant Teflon* Insulation.

TEMPERATURE RATING: −90°C to +250°C.

VOLTAGE RATING: Based on insulation thickness.

AVAILABLE COLORS: White, Black, Red, Green, Yellow, Lt. Blue, Brown, Orange, Gray, Violet. (Also available in tracer colors)

PUT-UP: 250′, 500′, 1000′

PLASTIC KINKLESS TEST LEAD WIRE

Soft formulation vinyl maximum flexibility. Temperature stability from −80°C to +115°C. Exceed requirements for MIL-I-3930A Type JP (PVC). Suitable for test leads, etc. Resistant to gasoline and oil. Excellent abrasion resistance.

DESCRIPTION: One conductor tinned copper stranded, special formulation vinyl insulation — smooth surface.

OPERATING TEMPERATURE: −80°C to +105°C, 5000V rating.

COLORS: Black, Red, Yellow, Green, White, Blue.

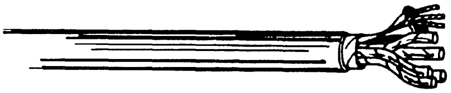
STANDARD PUT-UP: 500 Ft., 1000 Ft.

NOTE: #1922 is designed for IBM System 34-5250 (Cable #736221).
#1923 is designed for Wang System (Cable #420-0057).

COMPUTER CABLE MULTIPAIR FOIL SHIELD TO UL STYLE 2464



DESCRIPTION: Each conductor is #24 AWG 7/32 tinned copper, color coded, .009″ wall of semi-rigid PVC (UL Style 1061, CSA Type S-R PVC). Conductors are twisted in pairs. Overall aluminum/polyester foil shield and 7 strand tinned copper drain wire. Gray PVC jacket. To UL style 2464.

Construction is suitable for computer, communication and control applications.

Cable resists acids, alkalis, oil, solvents, moisture and fungus.

TEMPERATURE RANGE: −20°C to +80°C

VOLTAGE RATING: 300V

FLAMMABILITY: Passes UL VW-1

MIL-W-16878 INSTRUMENTATION — SHIELDED • UNSHIELDED

DESCRIPTION: One or more conductors, each conductor silver plated concentrically stranded copper wire. Type E Extruded TFE .010″ insulation. When shielded, braided silver plated copper shield over conductor(s), 90% shield coverage. When covered, either a TEFLON* impregnated fiberglass braid or a .010″ TEFLON* fused, double tape jacket overall. Fungus, solvent, moisture, flame, acid, alkali and oil resistant. Multiconductors are twisted.

TEMP. RATING: −65°C to +200°C. FOR 250°C USE N.P. CONDUCTOR.

VOLT. RATING: 600V.

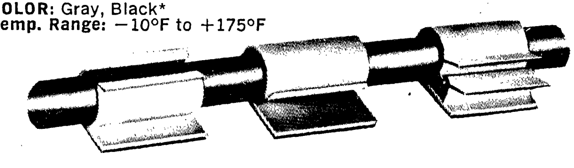
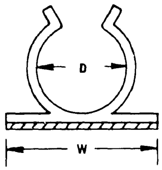
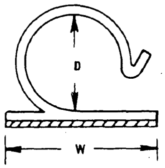
Temp. Range: −10°F to +175°F

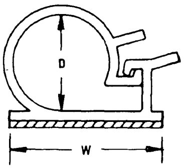




CAT. NO. 660



CAT. NO. 670



CAT. NO. 680 (LOCKING)

For fast secure mounting on smooth surfaces. No need to screw, nail or staple in place. Fastens in a flash — just peel off the protective backing and press in place on a clean, dry surface. For best results allow a few seconds for adhesive to set before applying load.

These plastic clips are insulating, strong and elastic. They have many uses, such as keeping telephone wires off the floor, holding wire, cable, tubing rods, etc. in position.

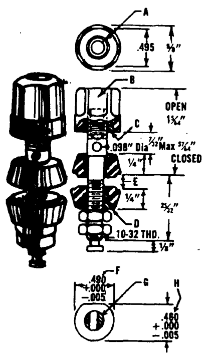
BINDING POSTS - MULTI-PURPOSE

Wrap Around

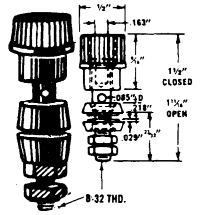


Molded nylon body. Accepts tip plug, spade lug. banana plug, wire alligator clip and direct solder connection. Has molded-in brass inserts in head and washer. Rated at 30 amps. AC Capacitance 5. OMMFD. Banana plug recepticle .161" I.D. head non-removable from stud and washer completely insulates post from panel. For panels 1/16" to 1/4" thick; drill 1/2" hole for mounting washers. Wire hole is at right angle to flat on insulated washer.

COLORS: Red, Black (specify)

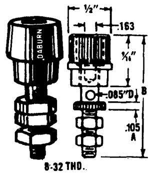
DABURN No.	**Std. Pkg.**
18-72 Fluted Head Post	100
18-75 Hex-head Post	100

STANDARD DUTY BINDING POST



Molded nylon captive head. Brass, nickle plated stud and nuts. Rated at 15 amps. AC, capacitance 3.0 PF. Mounts in 1/4" round hole in panels up to 1/8" thick.

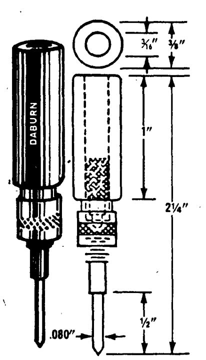
COLORS: Red, Black (specify)



DABURN No.	**Std. Pkg.**
18-78 All insulated type	100
18-79 Grounded type	100

INSULATED PHONE TIP

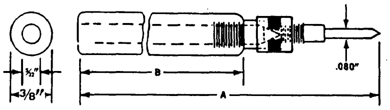
SOLDERLESS SENIOR



Fits any standard phone jack. Brass, nickle plated body. Solderless connection for wire which fits thru body of tip and secured under knurled nut. Shock-resistant plastic handle.

DABURN No.		**Std. Pkg.**
19-09	Senior	50

SOLDERLESS TEST PROD



Body is brass, nickle plated with molded plastic handle. Solderless connection for wire fits thru handle and plug body and wraps under knurled nut.

DABURN NYLON FASTENINGS ZYTEL 101 MIL-P-20693A

Has outstanding insulation specs. hi-resistance to heat, shock, vibration, chemical. Is light in weight, superior torque strength. Corrosion resistant, non magnetic. Continuous service temperature to 300°F. All parts made to American thread standards to Class 2A or 2B fit. B18.2 (hex nuts), B18.6 (machine screws), B1.1 (thread specs.).

DATAK FLEXY®MARKER™ for wire

A MAJOR ADVANCE in Marking Wire. The ULTRA-THIN FLEXY-MARKER

GENERAL SPECIFICATIONS

DIMENSIONS (Printed Markers): .25"W (nom.) x 1.125"L. Max. wire dia. for full wrap = 0.35". Min. wire dia. for legible marking = 0.040". See table for write-on marker dimensions.

BASE FILM: Soft, conformable .003" vinyl film.

MARKING INK: Black thermosetting. Fused into base film for permanency.

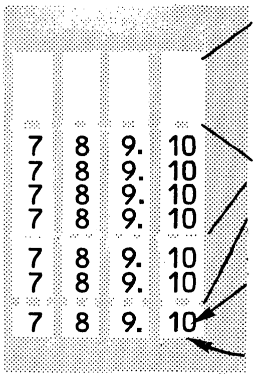
ADHESIVE: Modified acrylic. Excellent adhesion to metals and most wire insulations, including all vinyls. For reliable results on Teflon make a full wrap with overlap. Surfaces must be oil-free before application.

TEMPERATURE RANGE: −55°C (−67°F) to 130°C (266°F). Marker will withstand brief excursions to a 150°C ambient but yellowing will occur after several hundred hours.

RESISTANCE TO PETROLEUM PRODUCTS: Unaffected by immersion in most lubricating and hydraulic oils.

NOTE: Your conditions may vary from our test parameters. Test this product under your conditions to determine its ultimate suitability.

PRINTED MARKERS



TAB has no adhesive. Flick with a fingernail, apply marker and pull off in one easy motion.

MARKER FILM is dead-soft. Conforms perfectly even if wire is flexed.

3 PERFORATIONS are graduated in strength. You can pull off marker sections in order as you apply. Save balance for reuse.

LEGENDS are baked in. Won't fade, dissolve or wear off.

ADHESIVE bonds securely, even to vinyls. Markers won't loosen or fall off in time.

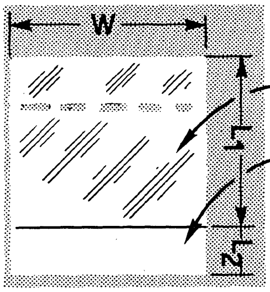
HOW SUPPLIED

FLEXY-MARKER™ wire markers are supplied in sets of 24 identical 3¼ x 5⅞ inch sheets bound into a handy pocket pad. A set has 1056 two figure markers, 768 three figure markers or 624 four figure markers per set. Each can be separated into 3 smaller markers.

COLOR ASSORTMENT. Twelve EIA and NEMA standard colors are available in an assortment called FCOLORS.

SEQUENTIAL NUMBERS AND ELECTRICAL TERMS. A number assortment from 1 to 104 (F1S104) and an assortment of miscellaneous electrical designations ((FBUS) are available.

WRITE-ON MARKERS



CLEAR FILM wraps around and protects write-on surface.

WRITE-ON SURFACE will accept pencil, pen or typewriter. Markings may be corrected immediately after typing or writing but become indelible after several hours.

HOW SUPPLIED

WRITE-ON WIRE MARKERS supplied in sets of 6 identical 8½" x 9¾" sheets suitable for typewriter or platen-feed printers. Markers are spaced in 1/6" multiples for easy typing. The write-on area is treated to absorb inks slowly so that corrections can be made if done at once. The write-on portion is protected by a clear vinyl overwrap when the marker is wrapped around a wire. Available in the following sizes:

CAT NO	W	L1	L2	Max. Wire Dia.	Markers/ Set
FWR1	0.50	0.5	0.1875	0.156 Inch	630
FWR2	1.25	0.5	0.1875	0.156	252

WIRE, CABLE AND INSULATION

Named One Of Electronic Buyers' News

TOP 100 Electronic Component Suppliers

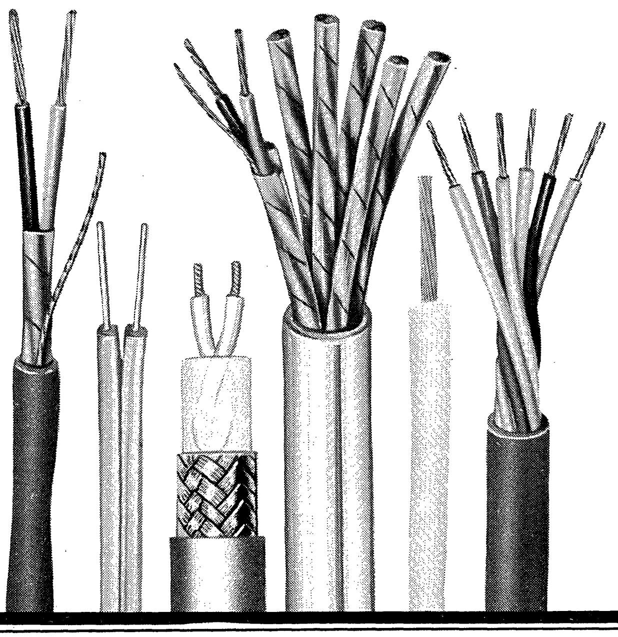
Tomorrow's Technology Today

Dearborn is totally committed to bringing you the absolute finest and technologically-correct electronic wire, cable, and insulation. We have know-how, experience and a variety of quality products for all of the following applications: Audio-Video, Automotive, Cellular Communications, Commercial, Computer, Communications Systems, Crane and Hoist Systems, Data Processing, Fiber Optics, Instrumentation, Manufacturing and Process Controls, Medical, Military, and more.

We're ready to serve you now . . . promptly and courteously . . . through our factory-direct sales personnel and nationwide network of manufacturers representatives and stocking distributors.

Cross over to Dearborn . . . let us prove ourselves. Call today for catalogs and cross-reference guide. We're as close to you as your telephone.

Call (312) 459-1000



▪ Cables

We offer a complete selection of high-quality cables in a variety of constructions, including multiconductor, paired, unshielded, shielded, braided copper shields, spiral wrap shield or our exclusive Alumylar™ foil shield that offers 100% coverage.

▪ Sound, Broadcast & Instrumentation ▪ Audio and Data ▪ Computer ▪ Coaxial ▪ Power-Limited Circuit Cables ▪ High-Temperature ▪ Data Transmission ▪ EC™ Plenum Cables ▪ Portable Cordage ▪ Welding Cable ▪ Many More

▪ Insulation

Our complete line of quality insulation features:

▪ Extruded Tubing ▪ Heat Shrinkable ▪ Polyolefin ▪ Teflon ▪ Neoprene ▪ Kynar

▪ Wire

Our complete line of wire is manufactured to meet and exceed the highest testing requirements. Popular types include:

▪ Aircraft ▪ Appliance & Fixture ▪ Bus Bar ▪ High-Voltage ▪ High-Temperature ▪ Hook-Up Wire ▪ Kynar ▪ Machine Tool ▪ Magnet ▪ Silicone ▪ Test Prod ▪ Teflon

▪ We're Your Full Service Source

Dearborn will custom fabricate to your specifications. Our services include Special Cables, Jacketing, Striping, Marking, Numbering, Lettering, Cutting & Stripping, Terminating, Harness Assemblies, Molded Plugs & Cord Sets, and Cabling.

We Will Be Pleased To Quote On Your Blue Print Sketches Or Job Specifications.

PIONEERS IN IRRADIATED WIRE

JUDD WIRE is a diversified wire and cable company offering hook-up wire, multiconductor cable and many specialized products for the electronics industry. Products are available for applications in the temperature range of -55°C to 200°C.

In addition to conventional products JUDD WIRE has pioneered and specializes in the manufacture of irradiation cross linked wire and cable product lines.

JUDD WIRE's design engineers work daily on providing solutions to wire and cable problems. Our customer count on JUDD WIRE to meet their requirements for engineering, manufacturing, testing, and packaging everything from the smallest hook-up wire to complex, state of the art multiconductor cables.

Decades of experience and thousands of design efforts back the commitment of JUDD WIRE to engineer solutions for today and tomorrow's wire and cable needs.

PCA THE UNIVERSAL HOOK-UP WIRE

PCA is JUDD WIRE's tradename or an acronym for Polychloroalkene, which is an exclusive irradiation cross-linked polyvinylchloride insulation.

In order to process PVC by electron beam, it is necessary to improve the formulation of the plastic insulation to withstand the high energy electrons that bombard the wire insulation. Electron beam irradiation of the special PCA formula results in a superior thermoset that improves the inherent desirable characteristics of PVC.

Compare the product advantages of PCA with conventional non-irradiated PVC and learn why billions of feet are sold annually to a variety of industries which prefer the superior characteristics and cost savings of JUDD WIRE's PCA hook-up wire.

THE JUDD WIRE PCA hook-up wire cross-reference guide for tri-rated approvals

FLEXRAD 125® HIGH TEMPERATURE HOOK-UP WIRE

FLEXRAD 125 is a flexible irradiation cross-linked polyethylene wire with a high temperature rating of 125° C. This proven high temperature hook-up wire with a flame retardant rating of VW-1 (FR-1), offers excellent abrasion and solder resistance and an unusual ability to withstand exposure to many chemicals and solvents.

FLEXRAD 125 has a variety of uses in many industries. Its high temperature and flame retardant ratings recommend it as a replacement for many other UL and CSA approved wires. It is also approved for military applications under Specification Mil-W-16878, Revision E, slash sheets 14, 15 and 16.

Electrical and electronic component and equipment manufacturers now have an alternative to solve the problems encountered while using conventional PVC. The problems of a limited temperature range, solder iron shrinkback, creeping insulation during automated cut and strip operations, and poor abrasion resistance can now be eliminated by utilizing FLEXRAD 125.

Silver plated copper wire conductors must be used in order to withstand the high heat encountered when processing many fluorocarbon constructions. Fluctuations in the precious metals market over the past several years have caused many users of fluorocarbon insulated wires to review their use of these expensive constructions and seek comparable alternatives that provide similar quality.

FLEXRAD 125, processed with tinned copper conductors, provides an ideal alternative to fluorocarbon insulations for most applications where the maximum operating temperature does not exceed 125° C.

Production problems associated with fluorocarbon insulations, such as poor cold flow, low adhesion, poor cut through resistance, short lengths, limited flexibility, and poor potability, will be alleviated by specifying FLEXRAD 125.

THE JUDD WIRE FLEXRAD 125 cross-reference guide for tri-rated approvals

CUSTOM CABLE DESIGN

JUDD WIRE can custom design, or manufacture to your specification, a broad spectrum of special cables. Cables are available without shielding, or with conventional braids, spiral braids, aluminum foils, or conductive plastics. JUDD WIRE's cable jacketing facilities extrude irradiation cross-linked compounds as well as vinyls, nylons, polyethylenes, polyurethanes, and 150°C fluorocarbons. JUDD WIRE is a completely integrated wire and cable manufacturing facility combining technology with superior customer service.

PCA cables offer all the advantages of JUDD WIRE's exclusive irradiation cross-linked polychloro alkene insulation in a multi-conductor package.

Manufacturers of computers, data processing equipment, communication systems, and test equipment can use the superior characteristics and cost saving benefits of PCA cables.

Contract assembly

Lamtech Electronics:

State of the art technology and experience provide the profitable combination for precision-built, quality-assured, electronic systems and OEM products.

ELECTRONIC SUB-ASSEMBLIES:

- Multi-layered P.C. board assemblies
- Double-sided P.C. board assemblies
- Surface Mount Technology

CABLES, WIRING, HARNESSES:

- Harness Fabrication
- Cable or harness mounting to frames
- Wiring of devices to a printed circuit board or mechanical frame
- Fully automated wire cutting, stripping, capabilities (all sizes)

ENGINEERING DESIGN CAPABILITIES:

- Electronic Design
- Mechanical Design
- In-circuit Test (Gen-Rad™ 2272)
- Functional Test
- Environmental Test

ELECTRO-MECHANICAL ASSEMBLIES:

- Printed circuit boards mounted to chassis
- Electrical devices mounted to mechanical frames
- Rack mounting assemblies

LAMTECH QUALITY-ASSURANCE GUARANTEE:

We guarantee that the electronic systems we build will perform to your specifications.

Our quality control includes individual and statistical inspection of all incoming components, in-process testing, in-circuit test (Gen-Rad™ 2272), final product and functional test.

Gen-Rad™ is a Registered TradeMark of General Radio

The Lamtech AQL process satisfies the requirements of MIL-I-45208A.

Lamtech Electronics Corp.

620 East Street • Garland, Texas 75042

Phone: (214) 272-3504 or 454-6540.

L-COM MOLDED DATA CABLES BUILT FOR A LIFETIME

DATA COMMUNICATION CABLES BUILT FOR A LIFETIME OF WEAR & TEAR!

The drawing shows how our CSM series cables are built to last a lifetime. Optimum shielding is achieved by use of a conductive-Mylar-foil and a metal cover for the wires under the hood.

In addition, these cables are built to take years of abuse by encapsulating and fusing all twenty-five wires and the connector pins together resulting in an indestructible integral component. We know that almost all cable defects stem from breaks or shorts in the cable end, but this is now, totally eliminated—for a lifetime.

All data cable comply with EIA RS232C standards and have 25 conductors solder connected through to both **D-Sub Connectors. Attractive prices and quantity discounts available.**

An RS232 MODULAR ADAPTER You don't want to be without

This new concept allows conversion of standard serial devices to the popular Telco Modular Cables—Many advantages include:

- Cable change in a snap
- Inexpensive alternative to RS-232
- Male or Female D-Subs
- Two circuit choices
- Accepts 4, 6 or 8 Modular
- 2 Ports for test & Daisy Chain

M/A-COM
CABLE HOME GROUP

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC alternating current
A/D analog to digital
ADC analog to digital converter
ADP automatic data processing
AF audio frequency
AFC automatic frequency control
ALGOL algorithmic language
AM amplitude modulation
AND a logical operator
AQL acceptable quality level
ASCII American national standard code for information interchange
AWG American wire gauge

B

BALUN balanced to unbalanced
BASIC beginners' all-purpose symbolic instruction
BCD binary-coded decimal
BNC baby "N" connector
BUS basic utility system

C

CAD computer aided design
CAM computer aided manufacture
CATV cable television or community antenna television
CERMET ceramic metal element
Comm. communications
CMOS complementary metal-oxide semiconductor
CPS characters per second
CPU central processing unit

D

D/A digital to analog
DAC digital to analog converter
DC direct current
DIAC bidirectional trigger diode
DIL dual in-line
DIN Deutsche Industrie Normenausschuss
DIP dual in-line package
DPM digital panel meter
DTL diode transistor logic

E

EDP electronic data processing
EBCDIC extended binary coded decimal interchange code
EEPROM electrically erasable PROM
EMC electromagnetic compatibility
EMI electromagnetic interference
EMP electromagnetic pulse
EPROM electrically programmable ROM
ESR equivalent series resistance

F

FEP fluorinated ethylene propylene Copolymar, 200° Teflon
FET field-effect transistor
FM frequency modulation
FORTRAN formula translator

G

GaAsFET gallium arsenide field effect transistor
GPIB general purpose interface bus

H

HF high frequency (3 to 30 MHz)
HIPOT test, measurement and diagnostic equipment
HLL high level language
HV high voltage
Hz Hertz

I

IC integrated circuit
IDC insulation displacement contact
IF intermediate frequency
IO input/output (devices)
IR insulation resistance (or) infrared

J

JFET junction field effect transistor
JMOS junction metal oxide semiconductor

K

kHz kilohertz (10^3 hertz)
KSR keyboard send receive

L

LC inductance capacitance
LCD liquid crystal display
LED light-emitting diode
LF low frequency (30 to 300 kHz)
LIF low insertion force
LNA low noise amplifier
LNB low noise band
LSI large scale integration
LVDT linear velocity displacement transformer

M

MASER microwave amplification by stimulated emission of radiation
MATV master antenna television
μF microforad
MHz megahertz
MIPS million instructions per second
MIB microcomputer interface board
MOS metal oxide semiconductor
MOSFET metal oxide semiconductor field effect transistor
MOSIGT metal-oxide semiconductor insulated-gate transistor
MOV metal oxide varistor
MPU microprocessor unit
MSI medium scale integration

N

NBS National Bureau of Standards
NEMP nuclear electromagnetic pulse
NIM nuclear instrumentation module
NOR not OR
NTC negative temperature coefficient

O

OCR optical character reader
OEM original equipment manufacturer
OR a logical operator

P

PC printed circuit
PCB printed circuit board
pF picofarad
PGA pin grid array
PIN positive-intrinsic-negative (transistor)
PLA programmable logic array
PLL phased lock loop
PPI plan position indicator
PROM programmable read only memory
PTC positive temperature coefficient
PUT programmable unijunction transistor

Q

QAM quadrature amplitude modulation
Q (meter) quality-factor meter

R

RAM random access memory
RC resistance-capacitance
RFI radio frequency interference
RMS root mean square
ROM read only memory
RF radio frequency
RFC radio-frequency choke
RFI radio-frequency interference
RTD resistance-temperature detector
RTL resistor transistor logic
RTV room temperature vulcanizing
RW read/write

S

SAS silicon asymmetrical switch
SBC single board (micro) computer
SBS silicon bilateral switch
SCR silicon-controlled rectifier
SCS silicon controlled switch
SDA source & detector assemblies
SIDAC bidirectional voltage-triggered switch
SIP single in-line package
SSI small scale integration
SSR solid state relay
STL Schottky transistor logic
SUS silicon unilateral switch

T

TC temperature coefficient
TCXO temperature compensated crystal oscillator
TFE tetrafluoride ethylene propylene Copolymer, 250° Teflon
TRIAC bidirectional AC switch
TTL transistor-transistor logic
TTY teletypewriter

U

UHF ultra high frequency (300 MHz to 3 GHz)
UJT silicon unijunction transistor
UL Underwriters Laboratory
UPS uninterruptible power supply

V

VAC volts (of) alternating current
VAR volt-ampere reactive
VCR video cassette recorder
VDC volts (of) direct current
VHF very high frequency
VHSIC very high speed integrated circuit
VLF very low frequency (3 to 30 kHz)
VLSI very large scale integration
VME virtual machine environment
VRM voice recognition module
VTVM vacuum tube volt meter
VU volume unit
VSWR voltage standing wave ratio

W

WPS word processing software

Y

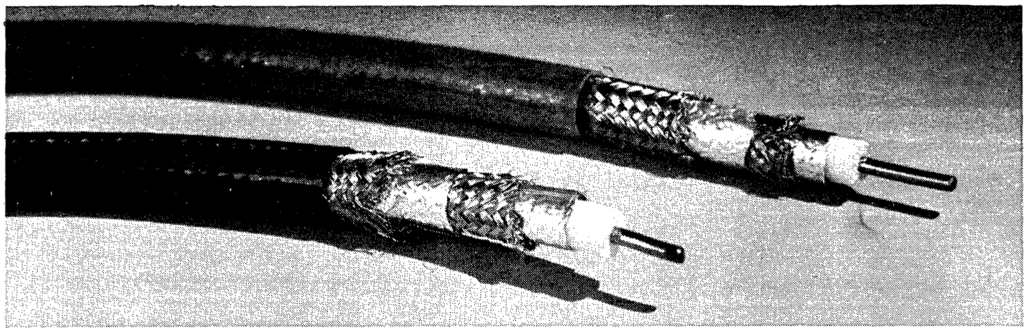
YIG yttrium iron garnet

Z

ZIF zero insertion force

Connector and Cable Division
Microdot Electronic Components Group

WIRE and CABLE



MALCO-SOUTH PASADENA, an innovator in wire and cable technology, offers a broad array of high-quality plenum, miniature, proprietary and custom designed cables and cable assemblies. Continual research and development — which produced such breakthroughs as the "Mini-Noise"™ low-noise cables and plenum cable — help Malco maintain its recognized leadership in the field.

In 1979, Malco pioneered the development of non-conduit plenum cable for local area networks. Since then, Malco Micro-Cell™ plenum cables with foamed Teflon® dielectrics and Teflon® jackets have been listed and classified by Underwriters Laboratories for flame resistance and low-smoke properties in accordance with NEC regulation #725-2(b). Malco Micro-Cell™ cable can therefore be used directly in plenums, without conduit, wherever NEC rules and exceptions apply. The unique and proven properties of Malco non-conduit cable reduce the risk and spread of fire in air plenums and ducts at a significant cost savings.

A leader in cable miniaturization, Malco's original work in suppression of motion-generated noise has earned it an outstanding reputation in the field of instrumentation. Among the important characteristics designed into Malco miniature cables are low-noise, low-capacitance, and high-operating temperatures.

As an innovator in connection technology as well, Malco combines state-of-the-art design and quality with years of experience in custom cable assemblies. Virtually the entire spectrum of Malco connectors and cables is available to meet your design requirements.

PRODUCTS

- **Plenum cable for local area networks**
- **Low noise coaxial cables**
- **Microminiature coaxial cables**
- **Twinaxial cables**
- **Triaxial cables**
- **Gigahertz cables**
- **RG type cables**
- **Multi-conductor cables**
- **Custom cable assemblies**

* Temperature Range 25°–35°C with Peak Resistance at 28°C

Your complete source for premium wires

When your project calls for fine resistance wire that's .0002″ in diameter, .050″ in diameter, or anything in between, turn to Molecu-Wire as your complete source.

The chart above gives you just a sampling of the dozens of "off-the-shelf" metals and alloys that engineers and designers often specify. In addition, our R&D group—a dedicated group of metallurgical specialists—can work with you to create a custom material having the exact properties you need.

Whatever wire you select, you'll find a wide array of finishes and coatings to meet your specific application. Our engineering staff is available to help you evaluate your options.

Metal and Alloy Wires†

FACILITIES/SERVICES

CUSTOM ENAMELING

In our custom enameling facilities we enamel most metals from .072" to .0004" round or square and rectangular sizes smaller than 14 AWG or 3500 sq. mil. cross-sectional area. Insulations are available in special colors, builds and bondable over-coats. Our short run production capabilities provide an alternative to large factory minimums and long deliveries.

DRAWING AND ANNEALING

Our drawing and annealing capabilities round out our custom manufacturing facilities. These capabilities allow us to fabricate most metals from .064" through .0004" diameter in the quantity you require.

TESTING LABORATORY

Expanded test facility provides complete chemical, physical and electrical test data for applicable military, federal, commercial and customer standards. We can provide you with fast and accurate answers to your technical questions.

CUSTOM PACKAGING

MWS has designed custom molded, individual foam shipping containers for our 2½," 3," 5" and 6" spools. These containers eliminate damage in shipping, and later prevent breakage in storage and production line handling.

WIRE TWISTING

MWS operates facilities for twisting 2 or more conductors 24 AWG and finer. Twisting tightness up to 30 twists per inch and to tolerances of ± 1%. Conductor materials include copper, plated conductors and specialty alloys. All insulations meet NEMA MW 1000, JW 1177A, 105-220°C, single thru quadruple film builds. Up to 10 insulation colors are available to aid in conductor identification.

WIRE SPOOLING

Spooling facilities handle every size wire from heavy square and rectangular to ultra-fine. This enables you to buy the quantity of wire you need on the spool size you want.

CALL TOLL FREE

In California 1 800 992 8553 • In Los Angeles Area: (818) 991-8553

Our goal is to have the wire you need, when you need it. That's why MWS stocks the largest inventory of specialty wires in the country. Over 20,000 types and sizes.

If we don't have the wire you need in stock, we'll custom manufacture it. Our short run capabilities provide an alternative to large factory minimums and long deliveries.

MWS®

Wire Industries

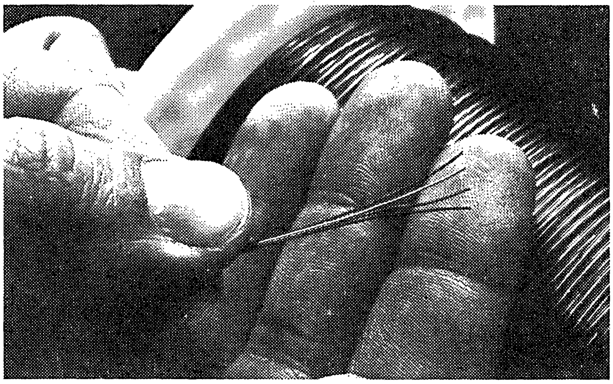
®Multifilar is a registered trademark of MWS Wire Industries.

MULTIFILAR® MAGNET WIRE



Whenever two or more magnet wires travel together, MULTIFILAR magnet wire is worth a closer look. This parallel-bonded, color-coded magnet wire offers many benefits for both small and large users.

Engineers should specify it when they're concerned with space, weight and reliability. Where consistent capacitance and impedance characteristics are needed, MULTIFILAR magnet wire outperforms windings where two separate magnet wires are used.

Production users benefit from increased layer winding speeds, reduced labor and handling. Color-coding assists in conductor identification and reduces termination errors.

MULTIFILAR magnet wires are custom produced by MWS. We guarantee flat, parallel construction in an array of sizes 16 AWG and finer, with up to 20 conductors in some sizes.

Both round and flat constructions are available. Color-coded conductors are available in most insulations with up to 10 different colors in some sizes. Conductor separation is also guaranteed with certain bonding mediums.

For an even closer look, send for a free sample, specifications and ordering information. Production minimums are as low as 500 feet.

GENERAL PRODUCT INFORMATION

Code No.	INSULATIONS	Thermal Rating	NEMA MW1000	MILW583 Class/Type
1	**Polyurethane***	105°C	MW2C	CL-105 T thru T-4
2	**Poly-Nylon***	130°C	MW28C	CL-130 B thru B-4
4	**Modified Polyester**	180°C	MW30C	CL-180 H thru H-4
5	**Armored Polyester**	200°C	MW35C	CL-200 K thru K-4
6	**Solderable Polyester***	180°C	MW26C	CL-155
7	**Formvar**	105°C	MW15C	CL-105 T thru T-4
8	**Pyre M.L.†**	220°C	MW16C	CL-220 M thru M-4

Code No.	Bonding Films (operating temp.)	Solvents for Conductor Separation	BOND THICKNESS STANDARDS		
			AWG Size	Thickness	Tolerances
1	**Polyvinyl Butyral** (105°C)	Alcohol Isopropyl or Denatured	16-20	.0007"	±.0002"
			21-28	.0005"	±.0002"
2	**Polyamide (Nylon)** (105°C)	None	29-32	.0004"	±.0001"
			33-36	.0003"	±.0001"
3	**Epoxy** (130°C)	Acetone	37-41	.0002"	±.0001"
			42-finer	.0001"	+.0001" -.0

* Solderable Insulations †Trademark of DuPont

NOTE: The above referenced insulations, bonding films, and bond thickness are standard. Other insulations, films and thicknesses are available upon request. CONDUCTOR SEPARATION: Bonding films can be softened and removed by immersion in appropriate solvents. Some mechanical action (i.e. wiping wires following immersion in solvent) may be required to affect conductor separation.

PART NUMBER ORDERING SYSTEM

Make your own 8 digit part number by following the guidelines outlined below.

EXAMPLE **B-2 3 8 1 1 1 1**

B	2	3 8	1	1	1	1
Product letter for all multifilar magnet wire	Number of conductors. Use ( ) for more than 9 conductors	AWG gauge sizes	Insulation thickness 1= single 2=heavy 3=triple 4=quadruple	Insulation type "See above chart for correct code number"	Color coded conductors 0=none required 1=red/green 2=green/clear 3=red/green/clear *9=special – call for color code	Bonding film "See above chart for correct code number"

EXAMPLE = 2 Conductors—38AWG Single Polyurethane—Red/Green—Butyral Bond
* Denotes Change

If you have any questions regarding how to specify a correct part number for the **multifilar** wire you need, don't hesitate to call us. Our salesmen or engineering staff will be happy to assist you.

THE SOLUTION

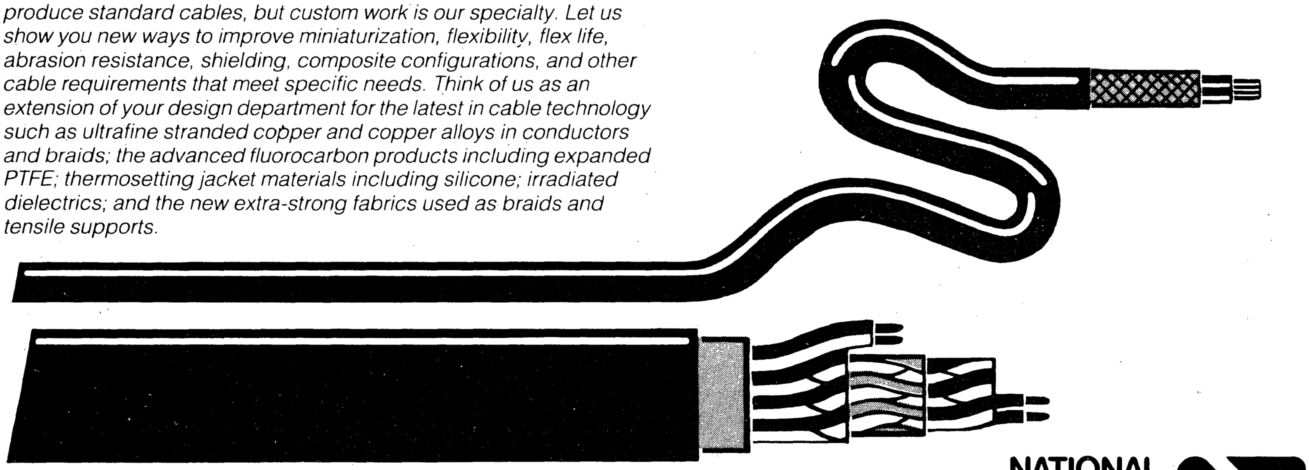
What are you looking for in a cable? Reliability? Flexibility? Miniaturization? Reducing interconnection costs? If you have a cable or cable assembly problem, we can solve it.

We're electronic cable specialists. National Electric Cable designs, tests, produces and improves cables, connectors and complete cable assemblies for specific applications. Our experience has taught us that advanced cable technology not only influences system design but frequently determines whether a system is functionally and economically viable and reliable.

Our engineers can help solve difficult interconnect problems with existing products, or help create special products to fit your needs.

Electronic Cables

As experienced manufacturers of cables, we know that all your designs cannot be met by the standard cables available. We can produce standard cables, but custom work is our specialty. Let us show you new ways to improve miniaturization, flexibility, flex life, abrasion resistance, shielding, composite configurations, and other cable requirements that meet specific needs. Think of us as an extension of your design department for the latest in cable technology such as ultrafine stranded copper and copper alloys in conductors and braids; the advanced fluorocarbon products including expanded PTFE; thermosetting jacket materials including silicone; irradiated dielectrics; and the new extra-strong fabrics used as braids and tensile supports.

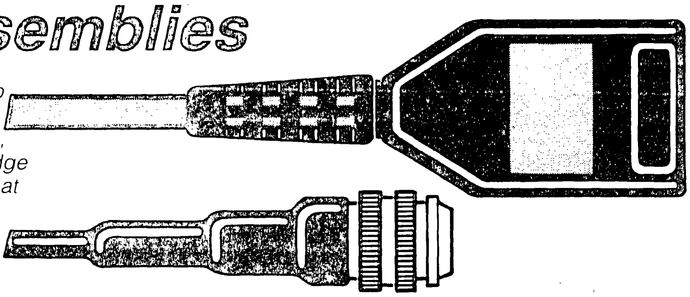


NATIONAL ELECTRIC CABLE

A National Applied Science Company

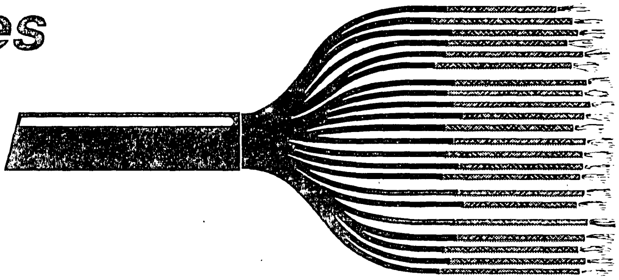
Electronic Cable Assemblies

We design and produce exceptionally high quality cable assemblies for high tech products ranging from flight simulators to medical diagnostic machines. Assemblies involving molded connectors, stringent military standards, microminiature soldering, and other processes requiring advanced interconnection knowledge are typical of the ongoing projects of Systems Engineering Group at National Electric Cable. Tell us your needs and we'll build you a prototype.



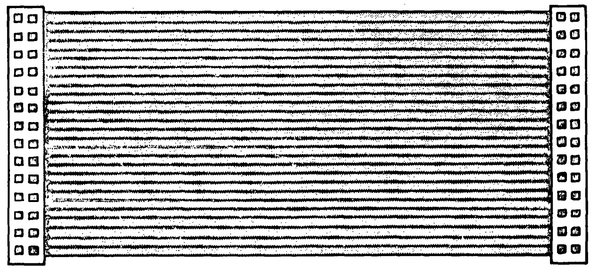
Micro-miniature Coaxes

Ultrasmall cables designed for maximum flex-life and flexibility are the specialty of National Electric Cable's design department and manufacturing facilities. Micro primaries are insulated with Teflon®. Coaxes (28-34 AWG) are of Tex-L 88® low-density Teflon, foamed Teflon, full-density Teflon and irradiated cross-linked foamed polyolefin (50-125ohm) with braid, tape or spiral shields. All of our Microflex™ cable assemblies are precisely terminated.



Precision Transmission

National Electric Cable's Precision™ Transmission Lines use PTFE insulated ribbon cable for high speed data transmission applications. Available for 50, 75, 95 and 100 – 110 ohm interconnections, Precision ribbon cables are assembled with AMP® Pro-G grounds-programmable receptacles in 10, 20, 26, 34, 40 and 50 positions to mate with a double row of posts on .100" x .100" grid or with AMP universal pin headers.



Standard Cable Assemblies

We have assembled more than a million feet of standard low capacitance and long haul low capacitance RS-232C, RS-449 and RS-422A cables to standard connectors. Our IEEE-488 has a double braid shield with separating extruded layer to prevent electrostatic generation between shields. All cables can conform with Class A of the FCC regulations against RF interference in data processing equipment. Guaranteed reliability, fast delivery and competitive pricing on standard or made-to-order lengths.

As a manufacturer of wire and cable products . . . with warehouses on both East and West coasts, National Wire & Cable is ready to fill your immediate needs. Choose from our standard lines of wire or cable . . . OR let us design and custom manufacture exactly what you require for your application.

Our wire inventory is now over 160 million feet, and our 500 different standard multi-conductor cables total in excess of 1.3 million feet!

When you call National Wire, you'll find we are especially well equipped to handle your large as well as minimal requirements. If our "standard" items won't meet your application, we have the wire inventory, the machinery, the expertise to come up with exactly what you need. 105,000 square feet of manufacturing area and our expert engineering staff are at your disposal!!! All cable components are produced within our own facility in order to assure complete quality control.

Review the following catalog pages. If you need some assistance with your specific requirement, call our factory direct, or call our representative nearest you. See Manufacturers and Sales Office Directory Yellow Pages.

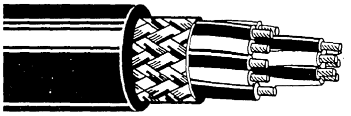
Miniature Signal & Control Cables Single Conductors (NX Series)



(NX1922SJ shown)

National Wire & Cable Corporation manufactures a complete line of MINIATURE low voltage signal and control cable. Available as cabled pairs or cabled singles, with optional overall shield. Conductors are stranded tinned copper with .010″ wall of vinyl primary insulation for use up to 105°C per MIL-W-16878 Type B. Insulated for 600 volts working voltage. (Also meets U.L. AWM Type 1061; 300 volt, 80°C.) All are coded using 10 standard colors plus stripes on white per MIL-STD-681.

All conductors are planetary cabled and contra-helically laid for optimum flexibility, with a Mylar tape barrier under shields. Shielded cables have a tinned copper braid overall, of 85-90% coverage per MIL-C-7078; and braid angles below 40° for easy pushback.

The outer jacket is black abrasion-resistant 105°C. vinyl meeting MIL-I-631 Type F. All materials are self-extinguishing and fungus resistant. All items are U.L. LISTED STYLE 2343 COMPUTER CABLE; rated 80°C. (Higher temp. ratings apply for any non-U.L. service.)

U.L. and C.S.A. certification furnished only when requested.

Standard Putups: 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

IN STOCK

MIL-SPEC U.L. LISTED COMPUTER GRADE STYLE 2343

For light duty, gray jacketed version of these cables in the U.L. Style 2464, see NQ Series on following pages.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 5000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance from a wire to all else in a cable ranges from 45. to 70. pf/ft. at 1. kc, depending on gauge and position.
Insulation Leakage:	200. megohms/1000 ft. min. @ 500. VDC from any conductor to all else in cable.
Sheath Leakage:	10. megohms/1000 ft. min. @ 500 VDC from shield or conductor group through sheath to ground.
Temperature Range:	Suitable for continuous use from −40°C. to +105°C. (U.L. Service limited to +80°C.)
Bending Characteristics:	All cables are suitable for flexing to a circle diameter of 6. cable diameters from +105°C. to −20°C. Recommended flex diameter should be greater than 20 cable diameters for flexing at −40°C.

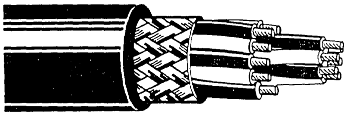
Heavy Duty Signal & Control Cables Single Conductors (NW Series)



(NW1918SJ shown)

IN STOCK

MIL-SPEC U.L. LISTED — STYLE 2343 & 2344

National Wire & Cable Corporation manufactures a complete line of multiple conductor control cable. Conductors are stranded tinned copper with 1/64" wall of vinyl primary insulation for use up to 105°C per MIL-W-16878 Type C.* Insulated for 1000 volts working voltage. Color coded using 10 standard colors plus stripes on white per MIL-STD-681.

All conductors are planetary cabled and contra-helically laid for optimum flexibility, with a Mylar tape serve over cable bundle. Shielded cables have a tinned copper braid overall, of 85-90% coverage per MIL-C-7078, and braid angles below 40° for easy pushback.

The outer jacket is black abrasion-resistant 105°C vinyl meeting MIL-I-631 Class F. All materials are self-extinguishing and fungus resistant. All cables are U. L. LISTED STYLE 2343; rated 80°C. (Higher temp. ratings apply to any non-U.L. service.) U.L. certification furnished only when requested.

Standard Putups: 100, 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

For applications in extreme environments, consult factory for alternative sheath materials.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8000 volts AC RMS, 60 cps.
U.L. Voltage Rating:	300 volts RMS AC (appliance use). 600 volts RMS AC (electronic use).
Military Voltage Rating:	1000 volts RMS.
Capacitance:	Nominal capacitance from a wire to all else in the cable ranges from 40 to 65 mmfd per ft., @ 1000 cps; dependent on gauge and position.
Insulation Leakage Res.:	200. megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms/1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Usable Temp. Range:	Suitable for continuous use from +105°C to −55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C. For continuous flexing applications consult factory.

* Insulated wires also meet U.L. style 1007 and CSA type TR-64.
† Denotes U.L. Style 2344.

Conductor sizes 22, 20, 18, 16, 14 & 12 gauge. 22 AWG is 7 strand. All others 19 strand.

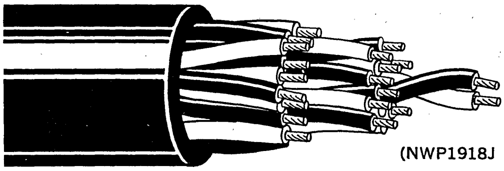
Heavy Duty
Signal & Control Cables
Twisted Pairs
(NWP Series)



(NWP1918J shown)

IN STOCK MIL-SPEC

U.L. LISTED

Identical to National's NW-Series Cables except offered as twisted pairs.

National Wire & Cable Corporation manufactures a complete line of multiple pair control cables. Conductors are of tinned copper strand with $\frac{1}{64}$" vinyl primary insulation for use up to 105° C per MIL-W-16878D Type C. Insulated for **1000** volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per table below.

All pairs are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105°C black vinyl plastic per MIL-I-631; or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification. (Neoprene at added cost and only available for non-U.L. applications).

SHIELDED CABLES

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8,000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance wire to wire for a pair ranges from 27. to 40. mmfd/ft. Capacitance from both wires tied together measured to all else in common ranges from 35. to 60. mmfd/ft. dependent on gauge and position. Overall shield has negligible effect on W-W capacitance.
Insulation Leakage Res.:	200. megohms / 1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms / 1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Usable Temp. Range:	Suitable for continuous use from +105°C to −55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C. For continuous flexing applications consult factory.

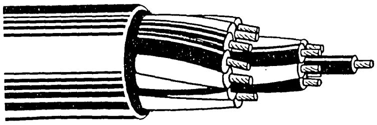
Miniature Signal & Control Cables Single Conductors (NQ Series)

EXTRA FLEXIBLE — GRAY PVC JACKET



(NQ1928J shown)

GRAY PVC JACKET

National Wire & Cable Corporation manufactures a complete line of highly flexible micro-miniature low-voltage instrument control cable. These are available as cabled pairs or singles, with optional overall shield of either foil with drain or a braided shield. Stocked with braided shields.

Conductors are stranded tinned copper with .010″ wall of tough extruded polyvinyl chloride primary insulation, rated for 300 volt use at +80°C under U. L. listed style 1061.* All are color coded using ten standard colors plus white with stripes per MIL-STD-681. Coded pairs use the same sequence as type NXP and NWP.

Conductors are planetary cabled and helically laid for optimum flexibility, with a barrier under braids. Shielded cables have a tinned copper braid of 90% coverage per MIL-C-7078, with braid angles below 40° for easy pushback; or have a 100% coverage foil shield in intimate contact with a drain wire for easy termination. See Section 3 of our master catalog for relative shield effectiveness.

Outer jacket is highly flexible abrasion-resistant gray polyvinyl chloride thermoplastic, meeting the requirements of U.L. listed style 2464.**

Military certification furnished only when requested.

All materials are flame retardant and fungus resistant.

Standard Putups: 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

* Wire also meets MIL-W-16878 type B, rated 600 volts, +105°C.

MIL-SPEC & U.L. LISTED STYLE 2464

TECHNICAL DATA (all cables)

Insulation breakdown voltage:	Greater than 3000 volts AC RMS, 60cps.
Capacitance:	Nominal capacitance from a wire to all else in a cable ranges from 25 to 45 pf/ft at 1kc, depending on gauge and position.
Insulation Leakage:	200 megohms/1000 feet minimum @ 500VDC from conductor to all else in cable.
Sheath Leakage:	10 megohms/1000 feet minimum @ 500VDC from shield or conductor group through sheath to ground.
Temperature Range:	U.L. rating: +80°C per U.L. style 2464. Military: Continuous use from −40°C to +105°C.
Bending Characteristics:	All cables are suitable for flexing to a circle diameter of 6 cable diameters from +105°C to −20°C. Recommended flex diameter should be greater than 20 cable diameters for flexing at −40°. For continuous flexing applications consult the factory.
Foil Shielded Cables:	The nominal overall diameter of foil shielded cables will be .006″ greater than the non-shielded cables of the same conductor count and wire size.
Characteristic Impedance: (NQP Paired Cables)	Ranges from 150 ohms to 45 ohms, dependent on wire size (AWG), geometry and drive method. Consult our technical staff for data on specific cable types.

MULTI-CONDUCTOR STOCK CABLED SINGLES

Conductor sizes 28, 26, 24, 22 are 7 strand. All others 19 strand.

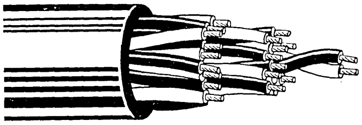
Miniature Signal & Control Cables Twisted Pairs (NQP Series)

EXTRA FLEXIBLE — GRAY PVC JACKET



(NQP1928J shown)

MIL-SPEC & U.L. LISTED **STYLE 2464**

GRAY PVC JACKET

National Wire & Cable Corporation manufactures a complete line of highly flexible micro-miniature low-voltage instrument control cable. These are available as cabled pairs or singles, with optional overall shield of either foil with drain or a braided shield. Stocked with braided shields.

Conductors are stranded tinned copper with .010″ wall of tough extruded polyvinyl chloride primary insulation, rated for 300 volt use at +80°C under U. L. listed style 1061.* All are color coded using ten standard colors plus white with stripes per MIL-STD-681. Coded pairs use the same sequence as type NXP and NWP.

Conductors are planetary cabled and helically laid for optimum flexibility, with a barrier under braids. Shielded cables have a tinned copper braid of 90% coverage per MIL-C-7078, with braid angles below 40° for easy pushback; or have a 100% coverage foil shield in intimate contact with a drain wire for easy termination. See Section 3 of our master catalog for relative shield effectiveness.

Outer jacket is highly flexible abrasion-resistant gray polyvinyl chloride thermoplastic, meeting the requirements of U.L. listed style 2464.**

Military certification furnished only when requested.

All materials are flame retardant and fungus resistant.

Standard Putups: 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

* Wire also meets MIL-W-16878 type B, rated 600 volts, +105°C.

** Jacket material is military rated for +105°C; meets MIL-I-631, Class F.

TECHNICAL DATA (all cables)

Insulation breakdown voltage:	Greater than 3000 volts AC RMS, 60cps.
Capacitance:	Nominal capacitance from a wire to all else in a cable ranges from 25 to 45 pf/ft at 1kc, depending on gauge and position.
Insulation Leakage:	200 megohms/1000 feet minimum @ 500VDC from conductor to all else in cable.
Sheath Leakage:	10 megohms/1000 feet minimum @ 500VDC from shield or conductor group through sheath to ground.
Temperature Range:	U.L. rating: +80°C per U.L. style 2464. Military: Continuous use from −40°C to +105°C.
Bending Characteristics:	All cables are suitable for flexing to a circle diameter of 6 cable diameters from +105°C to −20°C. Recommended flex diameter should be greater than 20 cable diameters for flexing at −40°. For continuous flexing applications consult the factory.
Foil Shielded Cables:	The nominal overall diameter of foil shielded cables will be .006″ greater than the non-shielded cables of the same conductor count and wire size.
Characteristic Impedance: (NQP Paired Cables)	Ranges from 150 ohms to 45 ohms, dependent on wire size (AWG), geometry and drive method. Consult our technical staff for data on specific cable types.

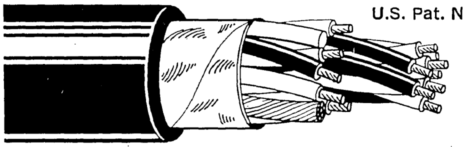
IN STOCK

Digital Data Transmission Cables

(D-200 Series)

UL AWM STYLE 2835



U.S. Pat. No. 3489844

Grey (Extra Flexible) or Black Vinyl Jackets
D-200 XX (XX designates number of pairs)
D-200 XXRF (RF designates braided shield over aluminum mylar foil shield) △

LOW VOLTAGE COMPUTER CABLE

THE D-200 SERIES CABLES ARE MULTIPLE-PAIR FLEXIBLE CABLES DESIGNED FOR TRANSMISSION OF DIGITAL PULSE SIGNALS BETWEEN A COMPUTER AND ITS PERIPHERAL EQUIPMENT.

DESIGN FEATURES OF THE D-200 SERIES DIGITAL DATA CABLE

Unlike conventional flexible cable construction, the primary features offered by the D-200 series data cable are the high and accurately controlled characteristic impedance of every pair, regardless of its position in the cable and special geometry chosen to reduce crosstalk.

ADVANTAGES

1. Less crosstalk and noise from mismatched loads, due to proper matching.
2. Uniform light loading on drivers allows direct I.C. drive, accurate prediction of current demands from power supply, and driver power dissipation.
3. Proper load match reduces re-flection and inversion noise where driver end is not matched to line. (Typical of TTL.)
4. Special geometry and pair construction provides exceptionally close capacitance balance between pair wires, reducing differential crosstalk.

USAGE

We recommend use of balanced drive and differential-input line receivers for lowest crosstalk and best pulse reproduction, utilizing the 110 ohm balanced impedance of the pairs. With such a system, TTL speeds have been used on D-200 cable at 1 mc data rates over 1000 ft.

Where the system is single-ended drive and receive, all pairs exhibit the 78 ohm impedance. Since these line receivers cannot discriminate between noise and the desired signal, crosstalk limits the cable distance over which transmission is reliable. Typical runs for DTL having 50 ns risetimes are 200 ft. Where risetimes can be slowed to longer than 100 ns, run lengths are practical to 500 ft. Without differential line reception, runs over 500 ft are not recommended for D-200 cable due to external noise aspects.

The D-210 series cable are recommended for high noise or long-run application. (Utilizing individual shields.)

Although use of balanced drive and differential line reception will avoid most noise problems, there are some installations where the expected external noise is unknown but assumed to be very great. Here, the use of data cables having individually-shielded pairs may be considered as conservative engineering practice. The assurance of a lower received noise may justify the increased size, cost and risetime.

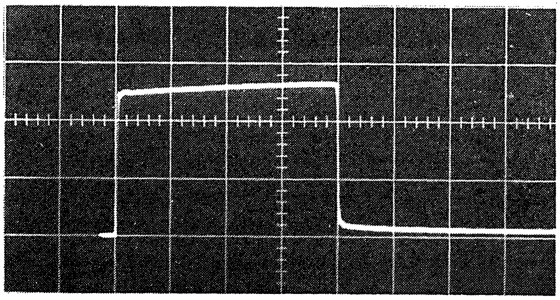
For these high noise-long run applications, Dynatronic Cable Engineering Corp has developed the D-210 series data cables. Electrical performance is essentially the same as the D-200 series cables, which use only an overall shield. △ An overall tinned-copper shield braid may be specified on either series by the suffix -RF on the part number. Standard D-200 shield is aluminum-mylar foil.

For runs of 1000-5000 ft. or where extra-fast output pulse risetime is required, we offer the D-220 series cable: a larger version of the D-200 series having improved transmission properties with sufficient mechanical strength for long pulls in conduit. Consult factory for technical data.

PULSE TRANSMISSION LOSS in D-series data cables causes a moderate amplitude loss, with definite rounding of the leading and trailing edges from 50% to 90% amplitude. The photos below (for a 1.25 megabit clock rate) show typical waveforms. The D-220 and D-222 series cables offer even lower losses than the D-200 or D-210 cables for long-run or fast-clocked applications.

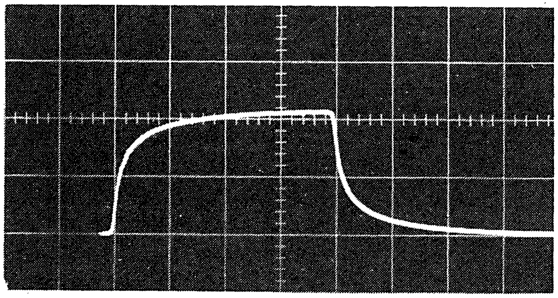
Contact our factory engineering staff for detailed pulse-shape versus distance information, or for special applications.

INPUT PULSE



Horizontal: 200. ns/cm
Vertical : 2. volts/cm

OUTPUT PULSE at 500.FT.



Horizontal: 200. ns/cm
Vertical : 2. volts/cm

We invite your telephone inquiries for technical information on data cables. Contact Mr. Frank Motley or Steve Keith in our Engineering Dept.

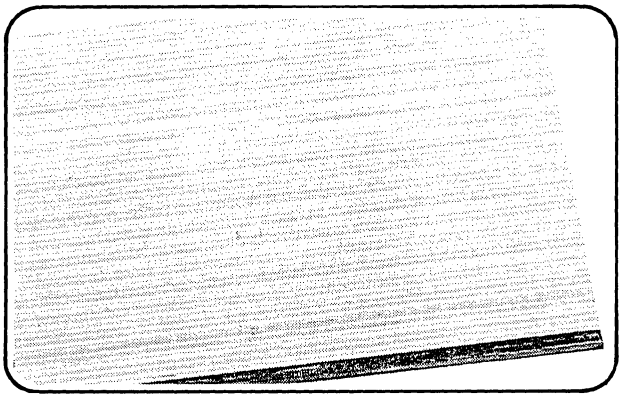
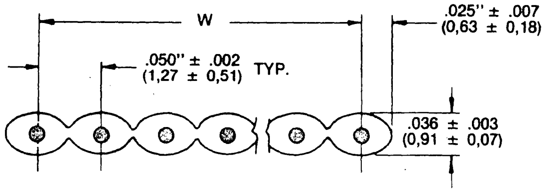
LAMINATED FLAT CABLES

GREY PVC LAMINATE

(NFG Series) UL Listed Style 2651



National Wire & Cable Corporation offers a wide variety of laminated flat cables, utilizing grey PVC insulation laminated around uninsulated stranded tinned copper conductors. The conductors are on .050" centers which make the cables compatible with most insulation displacement connectors (IDC). The cables are marked with one red edge to indicate conductor number one, and the laminate is applied in a manner to allow for simple conductor separation. Packaged in 100 foot lengths. Other lengths available on special request.



TECHNICAL DATA

Conductors:	28 AWG 7 x 36 Stranded Tinned Copper
Insulation:	Grey PVC
Cond. Spacing:	.050 ± .002
Cable Thickness:	.036 ± .003
Voltage Rating:	300V
Temp. Rating:	105 C
Impedance:	105 ohms Nom.
Capacitance:	14 pf/ft Nom.
Propagation Delay:	1.4 ns/ft Nom.

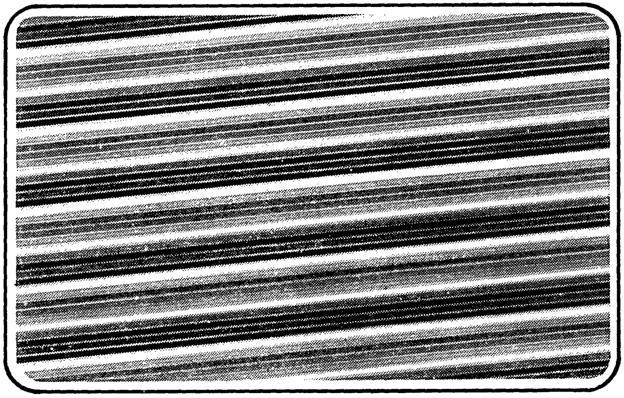
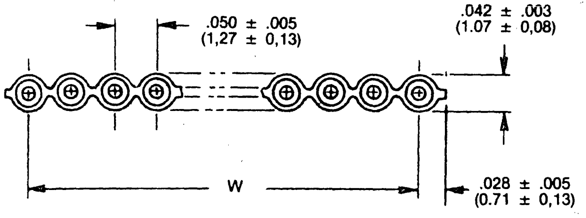
COLOR-CODED, CLEAR LAMINATE

(NFC Series) UL Listed Style 2697



National Wire & Cable Corporation offers a wide variety of flat cables, utilizing clear PVC insulation, laminated over preinsulated, stranded tinned copper conductors manufactured to UL Style 1061. The conductors are on .050" centers which make the cables compatible with most insulation displacement connectors (IDC). The preinsulated wires are color-coded for easy identification, and the clear laminate is applied in a manner to allow for simple conductor separation. Packaged in 100 foot lengths. Other lengths available on special request.



TECHNICAL DATA

Conductors:	28 AWG 7 x 36 Stranded Tinned Copper, UL Style 1061
Insulation:	PVC-Color-Coded Brown, Red, Orange, Yellow, Green, Blue, Violet, Gray, White, Black (Repeat)
Laminate:	Clear PVC
Cond. Spacing:	.050" ± .005"
Cable Thickness:	.042" Nom.
Voltage Rating:	300V
Temp. Rating:	80 C
Impedance:	103 ohms Nom.
Capacitance:	15 pf/ft Nom.
Propagation Delay:	1.4 ns/ft Nom.

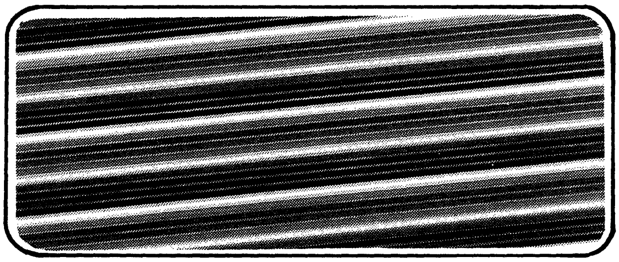
NATIONAL WIRE
AND CABLE CORPORATION

BONDED AND WOVEN FLAT CABLES

Dept. EM, 136 San Fernando Rd., Los Angeles, Calif. 90031
Phone (213) 225-5611, TWX: 910-321-4155, TLX: 181409, Fed. Stock Code H4-04569



National Wire and Cable Corporation offers a wide selection of bonded flat cables by bonding together preinsulated, stranded tinned copper conductors. This cable series is listed as Cable Style 2697, and can utilize any stranded PVC style of insulated wires. Stocked with UL1061 conductors, from 16–30 AWG. Other component styles available on special request. Color-coded BROWN through BLACK as shown below. Available in any number of conductors, providing total width does not exceed 4 inches. Packaged in 100 foot lengths.

National Wire and Cable Corporation offers a wide selection of woven flat cables by weaving together preinsulated, stranded tinned copper conductors. The weave is a twill type utilizing nylon, which allows conductors to move under flexing, creating a highly flexible cable. Stocked with UL1061 conductors from 16–30 AWG. Other component styles available on special request. Color-coded BROWN through BLACK as shown below. Available in any number of conductors providing total width does not exceed 3 inches. Packaged in 100 foot lengths.

National Wire and Cable Corporation offers a wide selection of woven flat cables made with twisted pairs, by weaving together the preinsulated, stranded tinned copper conductor pairs. The weave is a twill type utilizing nylon, which allows the pairs to move under flexing, creating a highly flexible twisted pair cable. Stocked with UL1061 conductors from 16–30 AWG. Other component styles available on special request. Color-coded BROWN through BLACK as shown below. The common conductor in each pair is black. Available in any number of pairs, providing total width does not exceed 3 inches. Packaged in 100 foot lengths.

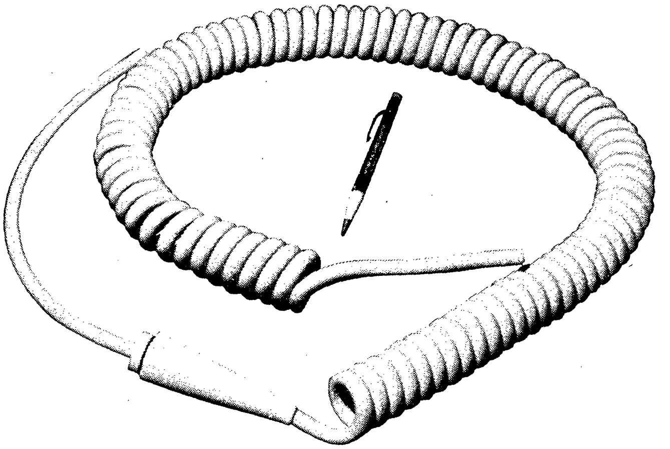
Coiled Instrumentation Cables for Custom Applications



Our new, automated coiling department is ready to design, and manufacture coiled instrumentation cables for your specific requirements. These cables are available in any number of conductors, and in gauge sizes 18 through 30 AWG. They are designed for high reliability, ultra-flexible long-life applications, as encountered in computer interconnects, bio-medical electronics, and optimum retractability, and general control cable use. Call our technical staff to discuss your custom application!

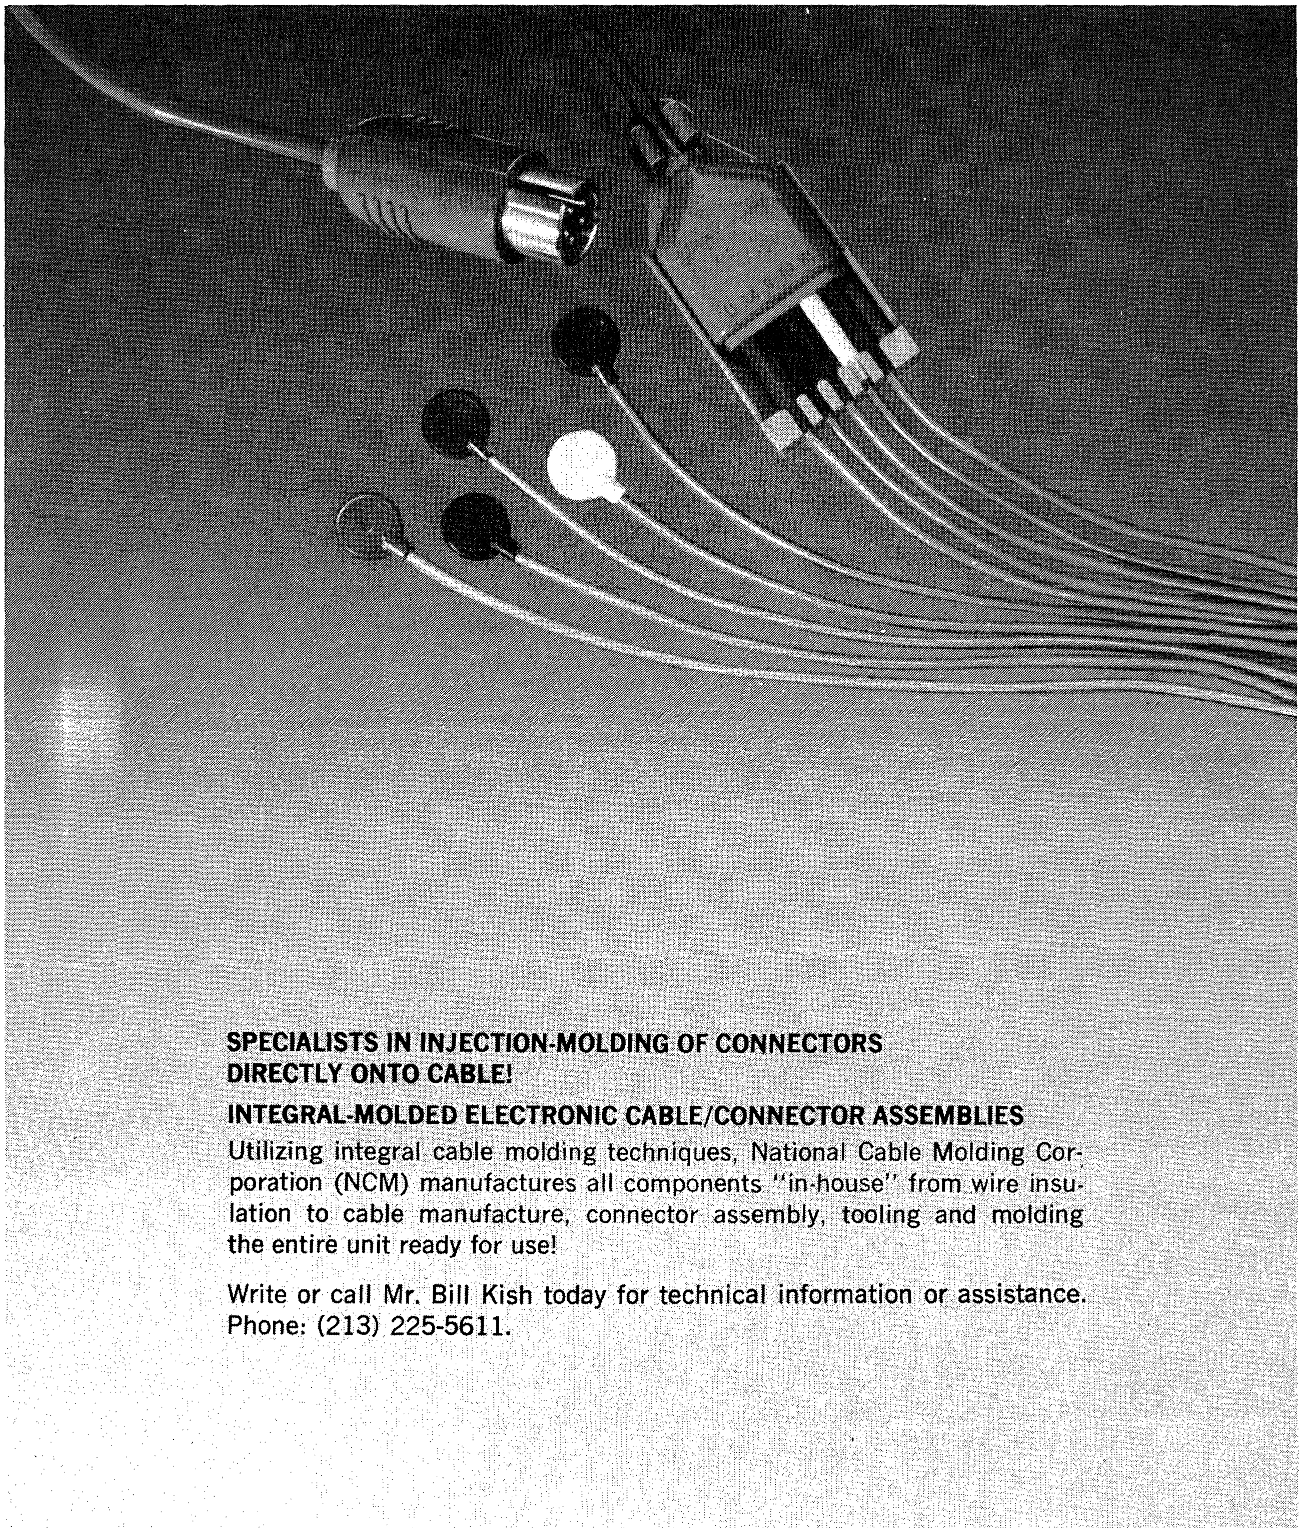
Molded Instrumentation Cables for all Types of Medical & Electronic Applications

AN AFFILIATE OF NATIONAL WIRE & CABLE CORPORATION



SPECIALISTS IN INJECTION-MOLDING OF CONNECTORS DIRECTLY ONTO CABLE!

INTEGRAL-MOLDED ELECTRONIC CABLE/CONNECTOR ASSEMBLIES

Utilizing integral cable molding techniques, National Cable Molding Corporation (NCM) manufactures all components "in-house" from wire insulation to cable manufacture, connector assembly, tooling and molding the entire unit ready for use!

Write or call Mr. Bill Kish today for technical information or assistance. Phone: (213) 225-5611.

Heli-Tube®

Spirally Cut Expandable Plastic Cable Harness

Exceptional Features and uses include...
- **BUNDLES WIRES, CABLES, or HOSES FIRMLY BUT ALLOWS FLEXIBILITY**
- **RESISTS ABRASION & INSULATES**
- **DAMPENS VIBRATION**

This Heli-Tube is recognized under the Component Program of Underwriter's Laboratories, Inc.

Standard Materials	Max. Oper. Temp.	Min. Oper. Temp.	Abrasion Resistance Lower Better mg loss per M cycles	Effect of Solvents	Effect of Acids	Effect of Alkalies	Flammability	Mil Spec. & Approvals
CLEAR POLYETHYLENE Low cost material . . . ideal for general applications. Not affected by ordinary solvents and extremely resistant to abrasion.	215°F 101°C	-105°F -76°C	22	None below 122°F 50°C	None	None	Flammable	Fed. Spec. LP390 MIL I 631D MIL P 26692
BLACK POLYETHYLENE Ultraviolet-resistant for outdoor use. This has the same qualities as Clear Polyethylene and, in addition, contains an ultraviolet absorber which permits it to be used in direct sunlight for long periods of time.	215°F 101°	-105°F -76°C	20	None below 122°F 50°C	None	None	Flammable	Fed. Spec. LP390 MIL I 631 D MIL P 26692
FIRE-RESISTANT POLYETHYLENE SELF EXTINGUISHING, yet has lower cost than Nylon or Teflon. Made of duPont White Rulan. (Also available in Black).	200°F 93°C	-1°F -19°C	27	None below 122°F 50°C	None	None	UL 94V-0	
NYLON Natural - Offers combination of light weight, temperature range, and high abrasion resistance. Self-extinguishing. Recommended for use in enclosed environments where possibility of fire exists. Even at temperatures beyond its operating range, or on exposure to flame, Nylon does not give off any toxic or irritating by-products. Nylon is six times as strong as Polyethylene.	250°F 121°C	-121°F -85°C	6-8	None	Satisfactory except for strong acids	None	UL 94V-2	MIL M-20693A Type I MIL M 22096 LP 410A
BLACK NYLON Has the same characteristics as Nylon Natural, but, in addition, has an ultraviolet absorber which permits use in direct sunlight. This Nylon is heat stabilized.	250°F 121°C	-121°F -85°	6-8	None	Satisfactory except for strong acids	None	UL 94V-2	MIL M-20693A Type II MIL M 22096 LP 410A
TEFLON Natural (TFE) - Has the widest temperature range. Can be used from -450°F to 500°F. Chemically inert. Non-flammable.	500°F 260°C	-450°F -85°C	7	None	None	None	Non-Flammable	MIL M-20693 AMS 3651B AMS 3653 AMS 3654 AMS 3655

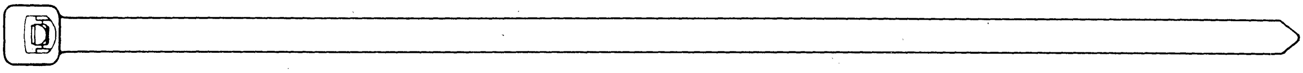
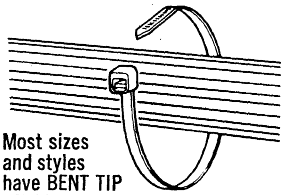
PANDUIT® wiring products

CABLE TIES

- Engineered with quality features designed to increase productivity and reduce your total installed cost:
  - — Low threading force
  - — Finger grip tip
  - — No sharp edges
  - — Bent tip

  Plus consistent quality assured by tests conducted by military and independent testing labs.
- Complete line of cable ties, clamps, push mount and marker ties. Meet all applicable Military Specifications. Recognized by U.L.
- All nylon, one-piece construction — up to 250 lbs. minimum loop tensile strength.
- Standard color natural nylon (colors available).

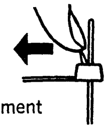




Most sizes and styles have BENT TIP DESIGN — for faster installation

RELEASABLE STYLE

Designed for applications where changes are anticipated



- Harness development
- Prototype work
- Equipment maintenance
- Modular serviceability

Easy to open • Economical

CABLE TIE INSTALLATION TOOLS

Panduit's complete line of cable tie installation tools allows you to choose the proper tool to meet all your cabling requirements — no matter what your application.

All the tools are lightweight, easy to operate and provide flush cut-off every time. Because they are fast and efficient, they speed cable tie installation and lower your total installed cost.

SOLD THROUGH AUTHORIZED PANDUIT DISTRIBUTORS

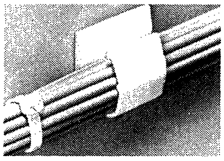
PANDUIT® wiring products

MOUNTING ACCESSORIES (used without cable ties)

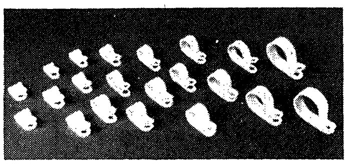


ADHESIVE BACKED CORD CLIPS — NYLON

Three sizes to hold cords, tubing or wire bundles up to .62″ dia. Are easily snapped into or out of the clips.

ACC19-A Up to .19″ dia.
ACC38-A Up to .38″ dia.
ACC62-A Up to .62″ dia.

FIXED DIAMETER CLAMPS — NYLON

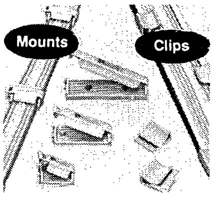


Series **CCS** (Std)
- 3/8″ wide
- 7 sizes (1/8″ thru 1/2″ dia.)

Series **CCH** (Hvy)
- 1/2″ wide
- 14 sizes (1/8″ thru 1 1/2″ dia.)

FLAT CABLE MOUNTS & CLIPS

- **Convenient, One-Piece** • **Releasable**
- **Adhesive Backed**



FLAT CABLE MOUNTS

- Three sizes to secure 1″, 2″ and 3″ wide flat cable
- Fast installation; releasable and reusable for easy revisions

FLAT CABLE CLIPS

- Securely retain any flat cable up to 11/64″ stack height; one size for any width
- Integral serrations grip cable, prevent slipping

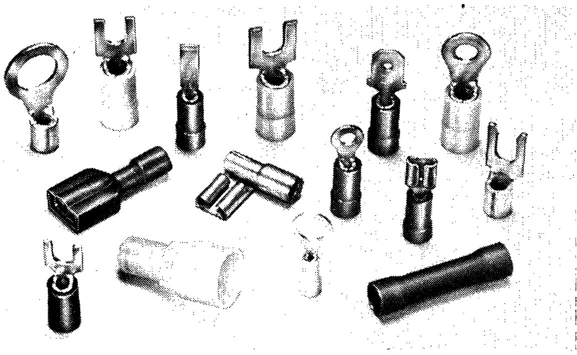
PANDUIT® COAX CONNECTORS

For RG-58, 59, 62, (59 & 62 Plenum) Cable
- BNC and TNC styles
- Selection of jacks, plugs, adapters, and receptacles
- Twist-on and wedge clamp installation

For Twinax (IBM73662, Belden 9207, Dearborn 6207) Cable
- Plug, splices, bulkhead receptacle



PAN-TERM® TERMINALS

- Complete line of PANDUIT PAN-TERM® terminals, disconnects, splices and wire joints for #26 through #2 AWG wire.
- Funnel entry, to speed assembly, available on most terminals and disconnects.
- Electrolytically refined copper for best crimping and low resistance/high conductivity.
- Applicable sizes are UL listed, SP certified, meet Mil. Specs.

For High Production—Terminals and disconnects supplied on reels. Continuously molded insulation eliminates the production problems of strip fed and tape fed systems.

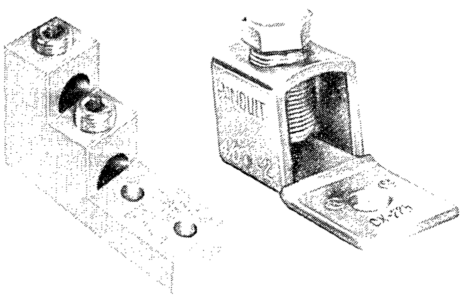
PANDUIT® wiring products



PAN-TERM™ MECHANICAL CONNECTORS

- Complete selection of styles and sizes for copper and aluminum cables #14 AWG through 1000 MCM. Also split bolt connectors.
- No special installation tools required. Connectors are easily reusable.
- Provide U.L. listed and CSA certified connections.
- Versatile—each connector can be used for a wide range of cable sizes.
- Heavy duty construction for reliable connections.

PANDUCT®

PLASTIC WIRING DUCT—TYPE "E"

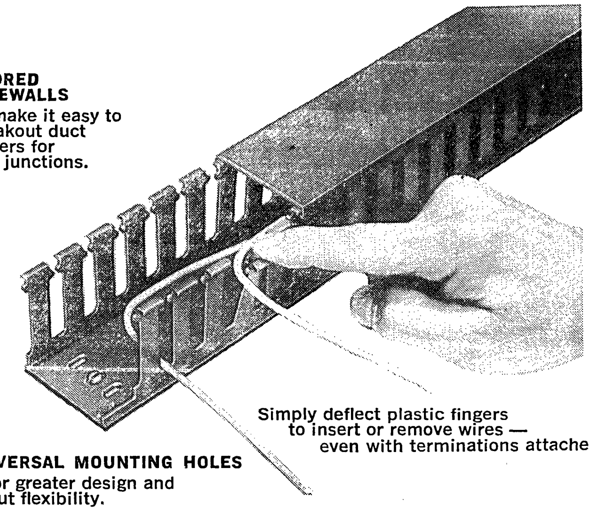
- Reduce your total installed costs with patented snap-in slot design:
  - —Holds breakout wires captive while providing complete accessibility for adding or removing wires — even with terminations attached.
  - —Result: your total cost is reduced during initial installation, wire tracing, trouble shooting and circuit revisions.
- Non-slip cover prevents vibration slippage, yet easy to install or remove.
- Standard color: Light gray. White and dark gray available. Standard length: 6 ft.
- Complete variety of accessories available for installation.
- Also available:
  - Type "S" Solid Wall Duct
  - Type "D" Round Hole Duct
  - Type "NE" & "NS" Chlorine-Free, High-Temperature Duct
  - Type "PE" & "PS" Clear Polycarbonate Duct

All "E", "S", and "D" Duct are available with optional adhesive backing.

Applicable sizes are recognized under Components Program of Underwriters' Laboratories, Inc.

C.S.A. CERTIFIED

MEETS J.I.C. REQUIREMENTS



SCORED SIDEWALLS
— make it easy to breakout duct fingers for "T" junctions.

Simply deflect plastic fingers to insert or remove wires — even with terminations attached.

UNIVERSAL MOUNTING HOLES
— for greater design and layout flexibility.

INTERNATIONAL Cords, Cordsets and Cordage

1. Detachable cordsets:

Detachable cordsets offer flexibility for both the equipment manufacturer and user.

The manufacturer can meet most international cord requirements with just one product model that is equipped with an IEC 320/CEE-22 connector. Then a cordset with the mating IEC 320 connector and the appropriate international plug can be specified at the time the product is shipped to the end user. The table below describes eight standard PCC cordsets.

International cordsets have some limitations. First, current ratings are limited to 6 amps by European agencies. The limitation is derived from restrictions placed on the IEC 320 connector. Equipment which draws more than 6 amps at 220 VAC should be equipped with permanently installed power cords described below. (For applications up to 10 amps, some countries allow the use of a new replaceable connector which is patterned after the IEC 320 unit but which is polarized to prevent insertion of the 6 amp models.

Secondly, addition of the connector adds to the cost of the power cord. Typically, the IEC 320 connector which is molded to the cord adds 50-75 cents to the cord cost. A panel mounting IEC 320 receptacle is about 50 cents. Both prices assume purchases in the 100-piece range. Clearly, a trade-off between added cost and manufacturing flexibility has to be made.

Note 1: Approved by VDE, OVE, KEMA, CEBEC, NEMKO, SEMKO, FEI, UTE.
Note 2: Agency approvals not usually required for cordsets in Italy.
Note 3: Conductors are color-coded blue, brown, green/yellow.
Note 4: Approved by ASTA, BSI, BASEC.

2. Unterminated IEC 320/CEE-22 cords:

With some products, export volume does not justify stocking different cordsets for even major foreign markets. In other situations, sales volume in Germany and the U.K. may be large enough to justify unique cordsets, whereas export volume to Switzerland, Denmark, Australia, and Israel, for example, are not sufficient.

In both of these cases, the equipment manufacturer can specify the model 2500 unterminated IEC 320/CEE-22 cord for use in low-volume markets. Cordsets described in the previous section would be specified for high-volume markets.

The disadvantage to this approach is, of course, that your customer or sales people must attach a suitable power plug to the cord. The decision on this issue will depend on the cost of stocking an additional cordset vs. the size of the affected market segment and the cost of field termination. (Call us for our brochure on international plugs and sockets.)

TABLE 2

86525000 Universal

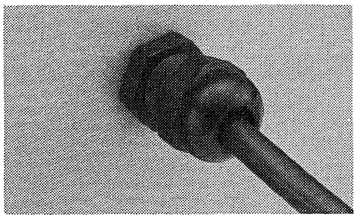
Part Number	Color	Length	Conductor Size	Current Rating	Approval(s)
86525000	Black	2.5 meters (98.4 inches)	0.75 mm²	6A	VDE, OVE, KEMA, CEBEC, NEMKO SEMKO, FEI, SEV, UTE

Note: Free end on model 86525000 is stripped 50/5 mm.

Strain Reliefs

Power supply cords all require some type of mechanical mounting device which positively secures them to an enclosure or piece of equipment. PCC strain reliefs provide an effective cable grip with or without an integral bend relief. Furthermore, the strain relief comes with a neoprene compression gland which prevents moisture intrusion along the cord when used with round cordage and when the cord and strain relief have been selected and assembled properly. UL recognized and CSA certified.

WITHOUT BEND RELIEF



PCC Part No.	Cordage O.D. Range
85810010	.187-.312 in. 4.7-7.9 mm
85810020	.231-.394 in. 5.9-10.0 mm
85810030	.270-.480 in 6.9-12.2 mm

WITH BEND RELIEF

From Panel Components Corporation

3. International power supply cords:

Permanently installed power supply cords are specified when the equipment requires more than 6 amps at 220-240 VAC. Generally, for applications in which the current requirement is 6-10 amps, 1.0 mm² conductors are specified. For applications rated at 10-16 amps, 1.5 mm² conductors should be specified. For comparison purposes, 16 AWG is 1.23 mm² and 14 AWG is 1.95 mm². (Note: the limit for portable equipment in Switzerland is 10 amps; in the U.K., 13 amps. In most other European countries, the limit is 16 amps. In equipment that draws greater amounts of current, the equipment must be permanently connected to the power system.)

Power supply cords may also be used to reduce component costs, especially in very high-volume production. This is particularly true in Class II (two wire, ungrounded) appliances. The model 86532000 cord described below is intended for these applications.

The power supply cords illustrated below are supplied with standard cut and strip terminations (50/5 mm) on the free end. Panel Components will customize these cords to meet your requirements.

Note 3: Conductor is not round but oblong.
Note 4: Cut blunt.

4. Other alternatives cordage and shielded cords:

Cordage: When neither a molded power supply cord or cordset is suitable, international cordage with appropriately sized conductors may be the best alternative. This cordage is tested and certified by VDE to HAR (HD-21) standards.

TABLE 4

CABLE Universal

Part No.	Cond. (mm²)	Max. Curr.	O.D.	Jacket Color	Jacket Mater.	HD-21 Number	AWG Equiv.
86010011	3 x 0.75	6A	6.8 mm	Black	PVC	H05VVF3G0.75	18 AWG

86010081	3 x 1.50	16A	8.5 mm	Gray	PVC	H05VVF3G1.50	14 AWG

Shielded cords and cordsets: Emission of conducted radio frequency interference is now subject to rigid controls in most industrialized countries. Since the power supply cord itself can act as an effective antenna at some frequencies, some designers specify shielded power cords in place of or in combination with RFI power line filters. VDE approval only on 86527000, 86528000, 86529000 and 86530000. UL recognition and CSA certification on 86534000.

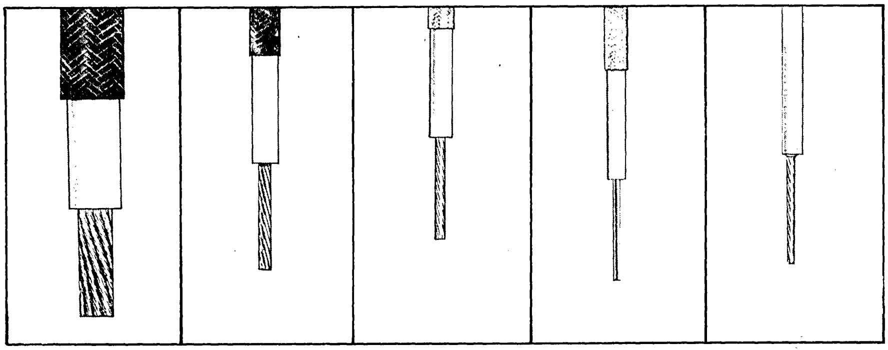
ROWE KNOWS WIRE AND CABLE

High Temperature silicone rubber wire and cable.

Rowe's silicone rubber insulation offers better performance and longer life than natural rubber or thermoplastic insulation. For example, our high temperature wire and cable is: heat stable to 200°C and flexible to −90°C, unaffected by severe thermal cycling, ultraviolet radiation, ozone or corona, resistant to ageing, moisture and chemicals, highly flame retardant and tough enough for unbraided lead wire.

Choose from a variety of UL listed styles or ask us to design one that meets your special requirements.



Power cable for 600 volts +.

Appliance & fixture wire for 300 volts +.

Apparatus & motor lead wire for 600 volts +.

Lighting wire for 600 volt transmission with solid tinned copper conductor, silicone rubber insulation and fiberglass braided covering.

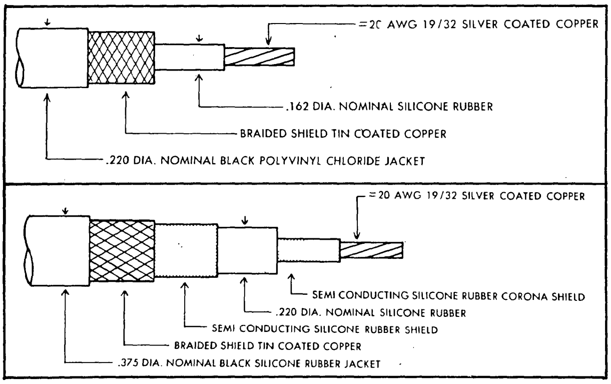
High Temp NB especially suited for motor lead wire. No braided covering necessary. Tinned copper, stranded or solid tinned copper conductor. Silicone rubber insulation in 10 colors.

All the above wire and cable feature tinned copper, stranded conductors, silicone rubber insulation, with fiberglass braided covering.

Hi-V cable, wire, and interconnections.

Well suited for a variety of industrial and military applications including accelerators, radar, x-ray, ECM and others. Hi-V combines semi-conducting, corona-suppressing layers with thermosetting materials for noise-free, corona-free cable and wire. It is available in single conductor, coaxial and triaxial configurations.

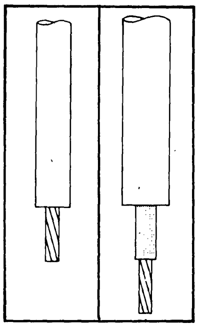
COAXIAL.



=20 AWG 19/32 SILVER COATED COPPER
.162 DIA. NOMINAL SILICONE RUBBER
BRAIDED SHIELD TIN COATED COPPER
.220 DIA. NOMINAL BLACK POLYVINYL CHLORIDE JACKET
=20 AWG 19/32 SILVER COATED COPPER
SEMI CONDUCTING SILICONE RUBBER CORONA SHIELD
.220 DIA. NOMINAL SILICONE RUBBER
SEMI CONDUCTING SILICONE RUBBER SHIELD
BRAIDED SHIELD TIN COATED COPPER
.375 DIA. NOMINAL BLACK SILICONE RUBBER JACKET

Features: 5-100KV minimum voltage ratings, 8-22 AWG corona-free and ozone resistant, 80°C to 200°C operating temperature range. Excellent for high pulse applications and for use with Rowe high voltage miniature coaxial connector series, G series connectors, Hi-pulse 40KV series and Rowe R75 connector series. All exhibit good corona-free RFI-EMI capabilities and have excellent flexibility properties.

SINGLE CONDUCTOR, UNSHIELDED.



Features: 5-60 KVDC minimum voltage ratings, 10-20 AWG corona-free, ozone-resistant material, 200°C operating temperature, excellent flexibility at high and low temperatures.

COMMONLY USED ELECTRICAL/ELECTRONIC ABBREVIATIONS AND ACRONYMS

A

AC	alternating current
A/D	analog to digital
ADC	analog to digital converter
ADP	automatic data processing
AF	audio frequency
AFC	automatic frequency control
ALGOL	algorithmic language
AM	amplitude modulation
AND	a logical operator
AQL	acceptable quality level
ASCII	American national standard code for information interchange
AWG	American wire gauge

B

BALUN	balanced to unbalanced
BASIC	beginners' all-purpose symbolic instruction
BCD	binary-coded decimal
BNC	baby "N" connector
BUS	basic utility system

C

CAD	computer aided design
CAM	computer aided manufacture
CATV	cable television or community antenna television
CERMET	ceramic metal element
Comm.	communications
CMOS	complementary metal-oxide semiconductor
CPS	characters per second
CPU	central processing unit

D

D/A	digital to analog
DAC	digital to analog converter
DC	direct current
DIAC	bidirectional trigger diode
DIL	dual in-line
DIN	Deutsche Industrie Normenausschuss
DIP	dual in-line package
DPM	digital panel meter
DTL	diode transistor logic

E

EDP	electronic data processing
EBCDIC	extended binary coded decimal interchange code
EEPROM	electrically erasable PROM
EMC	electromagnetic compatibility
EMI	electromagnetic interference
EMP	electromagnetic pulse
EPROM	electrically programmable ROM
ESR	equivalent series resistance

F

FEP	fluorinated ethylene propylene Copolymar, 200° Teflon
FET	field-effect transistor
FM	frequency modulation
FORTRAN	formula translator

G

GaAsFET	gallium arsenide field effect transistor
GPIB	general purpose interface bus

H

HF	high frequency (3 to 30 MHz)
HIPOT	test, measurement and diagnostic equipment
HLL	high level language
HV	high voltage
Hz	Hertz

I

IC	integrated circuit
IDC	insulation displacement contact
IF	intermediate frequency
IO	input/output (devices)
IR	insulation resistance (or) infrared

J

JFET	junction field effect transistor
JMOS	junction metal oxide semiconductor

K

kHz	kilohertz (10^3 hertz)
KSR	keyboard send receive

L

LC	inductance capacitance
LCD	liquid crystal display
LED	light-emitting diode
LF	low frequency (30 to 300 kHz)
LIF	low insertion force
LNA	low noise amplifier
LNB	low noise band
LSI	large scale integration
LVDT	linear velocity displacement transformer

M

MASER	microwave amplification by stimulated emission of radiation
MATV	master antenna television
μF	microforad
MHz	megahertz
MIPS	million instructions per second
MIB	microcomputer interface board
MOS	metal oxide semiconductor
MOSFET	metal oxide semiconductor field effect transistor
MOSIGT	metal-oxide semiconductor insulated-gate transistor
MOV	metal oxide varistor
MPU	microprocessor unit
MSI	medium scale integration

N

NBS	National Bureau of Standards
NEMP	nuclear electromagnetic pulse
NIM	nuclear instrumentation module
NOR	not OR
NTC	negative temperature coefficient

O

OCR	optical character reader
OEM	original equipment manufacturer
OR	a logical operator

P

PC	printed circuit
PCB	printed circuit board
pF	picofarad
PGA	pin grid array
PIN	positive-intrinsic-negative (transistor)
PLA	programmable logic array
PLL	phased lock loop
PPI	plan position indicator
PROM	programmable read only memory
PTC	positive temperature coefficient
PUT	programmable unijunction transistor

Q

QAM	quadrature amplitude modulation
Q (meter)	quality-factor meter

R

RAM	random access memory
RC	resistance-capacitance
RFI	radio frequency interference
RMS	root mean square
ROM	read only memory
RF	radio frequency
RFC	radio-frequency choke
RFI	radio-frequency interference
RTD	resistance-temperature detector
RTL	resistor transistor logic
RTV	room temperature vulcanizing
RW	read/write

S

SAS	silicon asymmetrical switch
SBC	single board (micro) computer
SBS	silicon bilateral switch
SCR	silicon-controlled rectifier
SCS	silicon controlled switch
SDA	source & detector assemblies
SIDAC	bidirectional voltage-triggered switch
SIP	single in-line package
SSI	small scale integration
SSR	solid state relay
STL	Schottky transistor logic
SUS	silicon unilateral switch

T

TC	temperature coefficient
TCXO	temperature compensated crystal oscillator
TFE	tetrafluoride ethylene propylene Copolymer, 250° Teflon
TRIAC	bidirectional AC switch
TTL	transistor-transistor logic
TTY	teletypewriter

U

UHF	ultra high frequency (300 MHz to 3 GHz)
UJT	silicon unijunction transistor
UL	Underwriters Laboratory
UPS	uninterruptible power supply

V

VAC	volts (of) alternating current
VAR	volt-ampere reactive
VCR	video cassette recorder
VDC	volts (of) direct current
VHF	very high frequency
VHSIC	very high speed integrated circuit
VLF	very low frequency (3 to 30 kHz)
VLSI	very large scale integration
VME	virtual machine environment
VRM	voice recognition module
VTVM	vacuum tube volt meter
VU	volume unit
VSWR	voltage standing wave ratio

W

WPS	word processing software

Y

YIG	yttrium iron garnet

Z

ZIF	zero insertion force

SHOGYO
INTERNATIONAL CORPORATION

DEPT. EM, 287 NORTHERN BOULEVARD
GREAT NECK, NEW YORK 11021

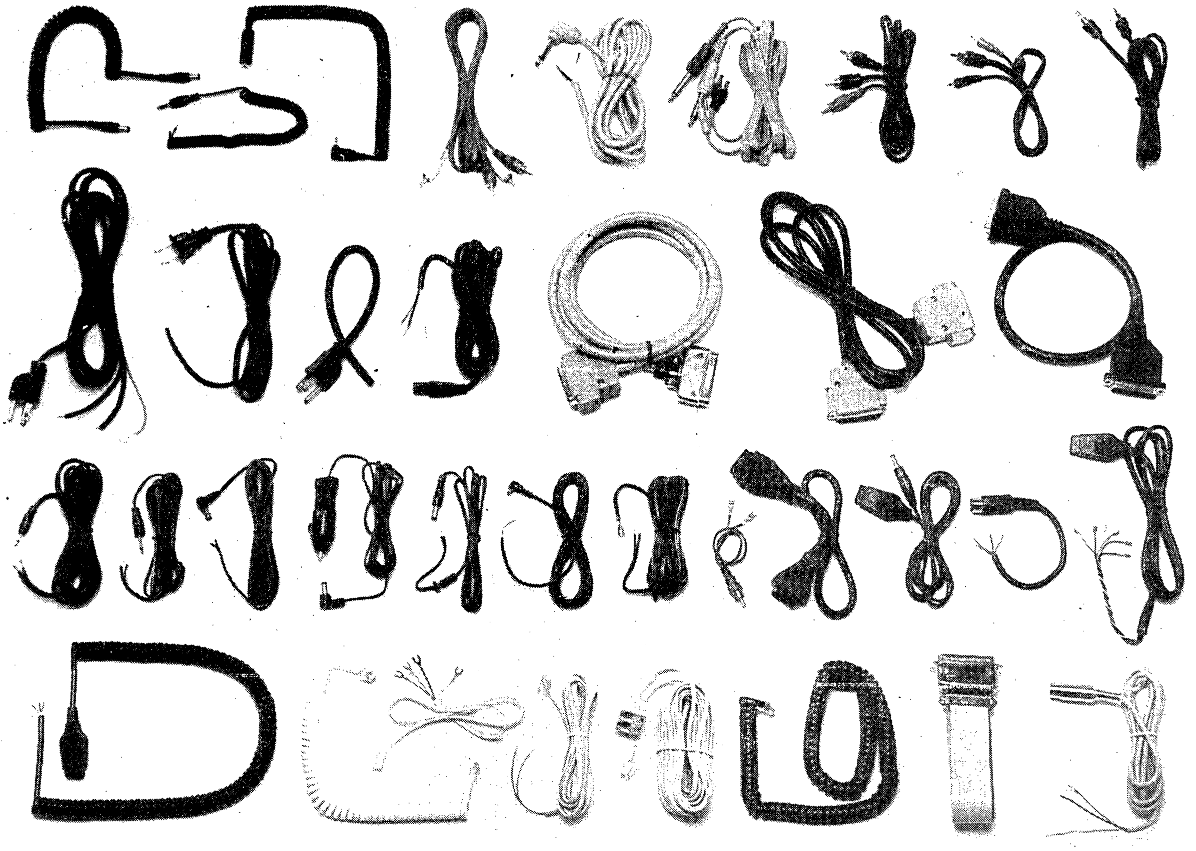
The products illustrated and listed are only a small representation of the full range of items available.



CORD SETS and CABLE ASSEMBLIES

TELECOMMUNICATION

Coiled or straight; round, flat or oval; copper, stranded or tinsel. Available with 4, 6 or 8-position modular plugs or spade lugs, keyed or unkeyed to mate with any standard modular connector.

AUDIO

A wide variety of molded plugs and in-line jacks for stereo or mono are offered shielded or unshielded with single or multi-conductors.

ZIP

Manufactured in standard or custom lengths, gauges, insulation thickness and jacket colors. Also available with molded DC plugs (2.1mm and 2.5mm) or phone plugs (2.1mm, 2.5mm, 3.5mm and 6.3mm). For use with wall-plug transformers.

COMPUTER and VIDEO

Designed to interface with all major computer/video products. Manufactured with molded or crimped "D" connectors, from 9 to 50 pins, male or female, plastic or metal, for round or flat cable. Teminations may be low-profile, edgewise or multipolar. DIN cables produced to spec and available with shielding.

POWER

Custom made to specified current and temperature ratings or produced in standard types including SPT-1, SPT-2, ST, SVT, SJT, XT or PXT with UL/CSA approval.

Cord sets and cable assemblies may be ordered to OEM specifications — length, AWG, number of conductors, color, etc. All Shogyo products are manufactured under one roof and quality assurance is 100% guaranteed.

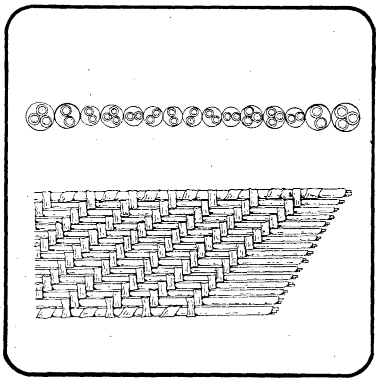
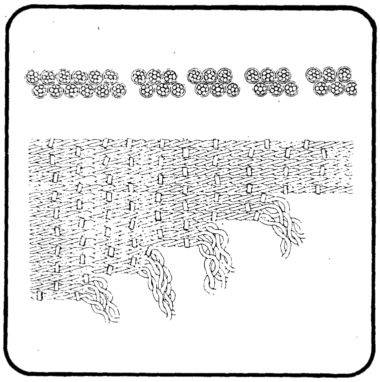
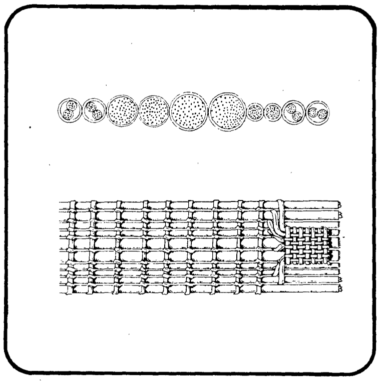
KAPTON
18 conductors
26 gauge — 19/38 strands shielded and jacketed
MIL-W-81381/17
Temperature rating — 200°C
Voltage rating — 600 volts



KAPTON
1. - twisted triad 22 gauge shielded and jacketed
2. - 22 gauge twisted pair shielded and jacketed
3. - 24 gauge twisted pair shielded and jacketed
4. - twisted triad 26 gauge shielded and jacketed
5. thru 11. - 26 gauge twisted pair shielded and jacketed
12. and 13. - twisted triad shielded and jacketed
14. - 24 gauge twisted pair shielded and jacketed
15. - 22 gauge twisted pair shielded and jacketed
16. - 22 gauge twisted triad shielded and jacketed



MILITARY - DESIGN YOUR OWN
Dimensions you supply
1. - dimension of unwoven
2. - dimension of woven
3. - number of break outs
4. - dimension from one break out to another
5. - type of wire insulation
6. - AWG and stranding
7. - location of break outs
8. - type of weave material



TEFZEL
Mix of conductors
Mixture of gauges (hybrid cable)
Programmed weave — woven with polyester
1. - 20 AWG
2. - 24 WAWG
3. - 24 AWG
4. - 22 AWG
5. thru 18. - 24 AWG
19. - 22 AWG twisted quad
20. - 20 AWG
21. thru 24. - 24 AWG

Dimension you supply:
1. dimension of unwoven
2. dimension of woven
3. dimension after woven terminates

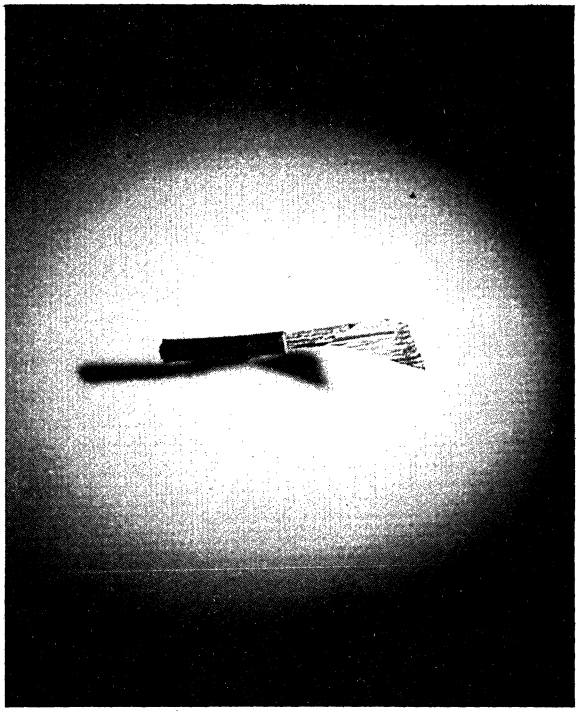
PART NUMBER PREFIX (51).

Virginia Plastics Company U.L. Recognized Modular Wiring Harnesses.

To meet your interconnection wiring needs Virginia Plastics provides the complete system. A complete modular interconnection system is reliable, inexpensive, and simple to install. We can meet your needs for FCC approval. Virginia Plastics has three different types of cable material: ***A) Double Shielded, B) Single Shield, C) Non-Shielded.***

DOUBLE SHIELDED Construction provides very high levels of EMI/RFI/ESD protection. The shield surrounding the conductor bundle is a semiconductive Olefin Propylene Rubber containing a conductive filler. Over this shield is a 100% spiral wrap of Aluminum/Mylar/Aluminum Foil Tape. Each signal conductor within the conductor bundle is in intimate contact with the inner shielding jacket. The shield ground (drain) conductor is in high compression contact with the inner shielding jacket at any and every point along the length of the cable.

SINGLE SHIELDED Construction provides effective EMI/RFI/ESD protection for most business machine applications. Aluminum/Mylar/Aluminum Foil Tape is wrapped around the conductor with a minimum overlap of 20%. Each signal conductor in the conductor bundle is in intimate contact with the shielding tape. The shield ground (drain) conductors are in high compression contact with the shield tape at any and every point along the length of the cable.

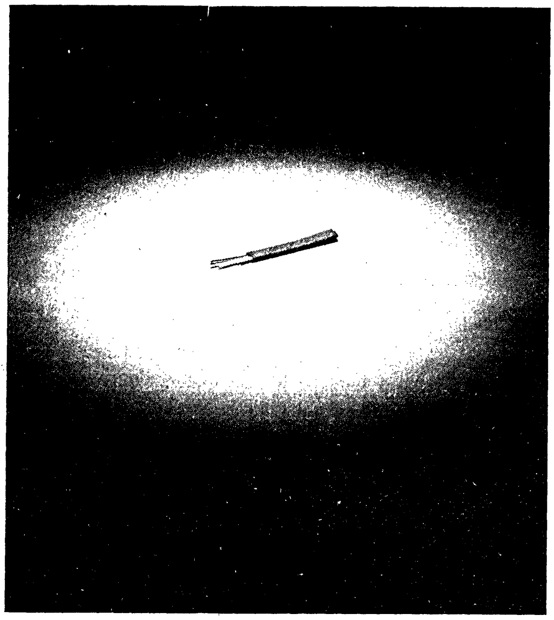


PART NUMBER PREFIX (1).

VIRGINIA PLASTICS

P.O. Box 4577
Roanoke, Virginia 24015-0577
Phone (703) 985-3811
TWX 710-870-0440

NON-SHIELDED Construction for applications where EMI shielding is not necessary. Standard 26 or 28 AWG conductors enclosed in either a PVC or CPRE 75 outer jacket.



Features of Shielded Harnesses:

- •UL recognized wiring harnesses.
- •Shield is drained by way of 20AWG ground wire.
- •Conductor gauge sizes available 24AWG, 26AWG, 28AWG.

Specifications on Shielded Harnesses:

Round Cable–	Single	Double
Outer Diameter of 6 Conductor	.165"	.190"
Outer Diameter of 8 Conductor	.190"	.215"

Electrical Specifications for Shielded Cables:

Dielectric Strength–	
Signal Conductor to Signal Conductor	1000 VRMS MIN.
Signal Conductor to Ground Conductor	500 VRMS MIN.
Signal Conductor to Shield/Shields	500 VRMS MIN.

Conductor Resistance:

Signal Conductor (26 AWG)	.131 OHMS/METER
Signal Ground (Drain, 20 AWG)	.039 OHMS/METER

Insulation Resistance:

Signal Conductor to Signal Conductor	1000 MEGOHMS MIN.
Signal Conductor to Ground Conductor	500 MEGOHMS MIN.
Signal Conductor to Shield/Shields	500 MEGOHMS MIN.

OUTGOING ELECTRICAL TESTING:

Each modular harness is inspected at a 100% level for each conductor and contact blade/conductor continuity. A 100% level inspection is performed for dielectric shorts from each conductor to each conductor or ground conductor or shield on each modular harness. All modular harnesses will be UL recognized and must meet the requirements for component modular wiring harnesses. All modular harnesses have a UL yellow card recognition.

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $5.00 for postage and handling. An invoice will accompany your System.

Don't waste any more time. Get organized now!

EEM FILE SYSTEM,

645 stewart ave., garden city, ny 11530
